Like pension accounting, the accounting for postretirement plans must recognize in the accounts and in the financial statements effects of several significant items. These items are:

1. Expected postretirement benefit obligation (EPBO).
2. Accumulated postretirement benefit obligation (APBO).
3. Postretirement benefit plan assets.
4. Prior service cost.
5. Net gain or loss.

The EPBO is not recognized in the financial statements or disclosed in the notes. Companies recompute it each year, and the actuary uses it in measuring the annual service cost. Because of the numerous assumptions and actuarial complexity involved in measuring annual service cost, we have omitted these computations of the EPBO.

Similar to pensions, companies must recognize in the financial statements items 2 through 5 listed above. In addition, as in pension accounting, companies must know the exact amount of these items in order to compute postretirement expense. Therefore, companies use the worksheet like that for pension accounting to record both the formal general journal entries and the memo entries.

2017 Entries and Worksheet

To illustrate the use of a worksheet in accounting for a postretirement benefits plan, assume that on January 1, 2017, Quest Company adopts a healthcare benefit plan. The following facts apply to the postretirement benefits plan for the year 2017.

- Plan assets at fair value on January 1, 2017, are zero.
- Actual and expected returns on plan assets are zero.
- Accumulated postretirement benefit obligation (APBO), January 1, 2017, is zero.
- Service cost is \$54,000.
- No prior service cost exists.
- Interest cost on the APBO is zero.
- Funding contributions during the year are \$38,000.
- Benefit payments to employees from plan are \$28,000.

Using that data, the worksheet in Illustration 20A-4 presents the postretirement entries for 2017.

16						

ILLUSTRATION 20A-4Postretirement
Worksheet—2017

Entry (a) records the service cost component, which increases postretirement expense \$54,000 and increases the liability (APBO) \$54,000. Entry (b) records Quest's funding of assets to the postretirement fund. The funding decreases cash \$38,000 and increases plan assets \$38,000. Entry (c) records the benefit payments made to retirees, which results in equal \$28,000 decreases to the plan assets and the liability (APBO).

Quest's December 31 adjusting entry formally records the postretirement expense in 2017, as follows.

December 31, 2017	
Postretirement Expense	54,000
Cash	38,000
Postretirement Asset/Liability	16,000

The credit to Postretirement Asset/Liability for \$16,000 represents the difference between the APBO and the plan assets. The \$16,000 credit balance is a liability because the plan is underfunded. The Postretirement Asset/Liability account balance of \$16,000 also equals the net of the balances in the memo accounts.

Illustration 20A-5 shows the funded status reported in the balance sheet. (Notice its similarity to the pension schedule.)

Accumulated postretirement benefit obligation (Credit)	\$ (26,000)
Plan assets at fair value (Debit)	10,000
Postretirement asset/liability (Credit)	\$ (16,000)

ILLUSTRATION 20A-5Postretirement
Reconciliation Schedule—
December 31, 2017

Recognition of Gains and Losses

Gains and losses represent changes in the APBO or the value of plan assets. These changes result either from actual experience different from that expected or from changes in actuarial assumptions. The amortization of these gains and losses follows the approach used for pensions. That is, the gains and losses are recorded in other comprehensive income.

The Corridor Approach

Consistent with pension accounting, companies amortize the gains and losses in accumulated other comprehensive income as a component of postretirement expense if, at the

beginning of the period, they exceed a “corridor” limit. The corridor is measured as the greater of 10 percent of the APBO or 10 percent of the market-related value of plan assets.

The intent of the **corridor approach** is to reduce volatility of postretirement expense by providing a reasonable opportunity for gains and losses to offset over time without affecting net periodic expense.

Amortization Methods

If the company must amortize gains and losses (beyond the corridor) on postretirement benefit plans, the **minimum amortization amount** is the excess gain or loss divided by the average remaining service life to expected retirement of all active employees. Companies may use any systematic method of amortization provided that: (1) the amount amortized in any period is equal to or greater than the minimum amount, (2) the company applies the method consistently, and (3) the company applies the method similarly for gains and losses.

The company must recompute the amount of gain or loss in accumulated other comprehensive income each year and amortize the gain or loss over the average remaining service life if the net amount exceeds the “corridor.”

2018 Entries and Worksheet

Continuing the Quest Company illustration into 2018, the following facts apply to the postretirement benefits plan for the year 2018.

- Actual return on plan assets is \$600.
- Expected return on plan assets is \$800.
- Discount rate is 8 percent.
- Increase in APBO due to change in actuarial assumptions is \$60,000.
- Service cost is \$26,000.
- Funding contributions during the year are \$18,000.
- Benefit payments to employees during the year are \$5,000.
- Average remaining service to expected retirement: 25 years.

18							

worksheet are the ending balances from Quest's 2017 postretirement benefits worksheet in Illustration 20A-4 (on page 1153).

Entries (d), (h), and (i) are similar to the corresponding entries previously explained for 2017. Entry (e) accrues the interest expense component, which increases both the liability and the postretirement expense by \$2,080 (the beginning APBO multiplied by the discount rate of 8%). Entries (f) and (g) are related. The expected return of \$800 is higher than the actual return of \$600. To smooth postretirement expense, Quest defers the unexpected loss of \$200 (\$800 – \$600) by debiting Other Comprehensive Income (G/L) and crediting Postretirement Expense. As a result of this adjustment, the expected return on the plan assets is the amount actually used to compute postretirement expense.

Entry (j) records the change in the APBO resulting from a change in actuarial assumptions. This \$60,000 increase in the employer's accumulated liability is an unexpected loss. Quest debits this loss to Other Comprehensive Income (G/L).

On December 31, Quest formally records net periodic expense for 2018 as follows.

December 31, 2018	
Postretirement Expense	27,280
Other Comprehensive Income (G/L)	60,200
Cash	18,000
Postretirement Asset/Liability	69,480

The balance of the Postretirement Asset/Liability account at December 31, 2018, is \$85,480. This balance is equal to the net of the balances in the memo accounts as shown in the reconciliation schedule in Illustration 20A-7.

Accumulated postretirement benefit obligation (Credit)	\$(109,080)
Plan assets at fair value (Debit)	<u>23,600</u>
Postretirement asset/liability (Credit)	<u>\$ (85,480)</u>

ILLUSTRATION 20A-7

(Corridor Test)—2019

DISCLOSURES IN NOTES TO THE FINANCIAL STATEMENTS

The disclosures required for other postretirement benefit plans are similar to and just as detailed and extensive as those required for pensions. The note disclosure for **Tootsie Roll, Inc.** in Illustration 20A-9 (page 1156) provides a good example of the extensive disclosure required for other postretirement benefit plans.

As indicated in Illustration 20A-9, Tootsie Roll shows the impact of the postretirement benefit plan on income, the balance sheet, and the cash flow statement, and it

ILLUSTRATION 20A-9Postretirement Benefit
Disclosure**Tootsie Roll Industries, Inc.****Notes to Financial Statements****Note 7 Employee Benefit Plans (partial)**

Postretirement health care benefit plans:

During fourth quarter 2013, the Company restructured and amended its post-retirement health benefits plan provided to corporate office and management employees. These changes resulted in a negative plan amendment, as defined by accounting guidance, resulting in a \$10,425 reduction in the Company's benefit obligation as of December 31, 2013. The plan changes generally limited future annual cost increases in health benefits to 3%, restricted this benefit to current employees with long-term service with the Company, eliminated the Company provided life insurance benefit and required retirees to pay the full cost of life insurance, and eliminated all post-retirement benefits for future employees effective April 1, 2014. Post-retirement benefits liabilities (as amended) were \$12,311 and \$9,176 at December 31, 2014 and 2013, respectively. The aforementioned increase reflects actuarial losses relating to an 86 basis point decrease in the discount rate (3.83% discount rate used at December 31, 2014) which generally reflects lower market interest rates, and an update of the mortality table based on the Society of Actuaries' research that indicates that retirees are living longer.

Amounts recognized in accumulated other comprehensive loss (pre-tax) at December 31, 2014 are as follows:

Prior service credit	\$ (9,449)
Net actuarial loss	(892)
Net amount recognized in accumulated other comprehensive (gain) loss	<u>\$(10,341)</u>

Amounts recognized in other
comprehensive income

The estimated actuarial loss (gain) and prior service credit (gain) to be amortized from accumulated other comprehensive loss (gain) into net periodic benefit cost during 2015 are \$(101) and \$(1,352), respectively.

The changes in the accumulated postretirement benefit obligation at December 31, 2014 and 2013 consist of the following:

	December 31	
	2014	2013
Benefit obligation, beginning of year	\$ 9,176	\$27,381
Service cost	342	1,036
Interest cost	423	1,060
Plan amendments	—	(10,425)
Actuarial (gain)/loss	2,611	(9,734)
Benefits paid	(241)	(142)
Benefit obligation, end of year	<u>\$12,311</u>	<u>\$ 9,176</u>

Reconciliation of OPEB
liability

Net periodic postretirement benefit cost included the following components:

	2014	2013	2012
Service cost—benefits attributed to service during the period	\$ 342	\$1,036	\$1,034
Interest cost on the accumulated postretirement benefit obligation	423	1,060	1,113
Net amortization	(1,804)	671	1,036
Net periodic postretirement benefit cost (income)	<u>\$(1,039)</u>	<u>\$2,767</u>	<u>\$3,183</u>

Components of OPEB
expenseExpected benefit
payments

The Company estimates future benefit payments will be \$328, \$367, \$412, \$451 and \$501 in 2015 through 2019, respectively, and a total of \$3,119 in 2020 through 2024. As a result of the plan changes, the Company will no longer qualify for the Medicare Part D retiree drugs subsidy which have historically not been significant.

provides information on important assumptions used in the measurement of the post-retirement benefit obligation. Also note that given no tax incentives for funding, Tootsie Roll (like many companies) does not have any assets set aside for its other postretirement benefit obligations.

While Tootsie Roll has only an other postretirement benefit plan, many companies sponsor both defined benefit pension and other postretirement plans. Given the

similarities in accounting for these plans, companies can combine pension and other postretirement benefit disclosures.

ACTUARIAL ASSUMPTIONS AND CONCEPTUAL ISSUES

Measurement of the EPBO, the APBO, and the net periodic postretirement benefit cost is involved and complex. Due to the uncertainties in forecasting healthcare costs, rates of use, changes in government health programs, and the differences employed in non-medical assumptions (e.g., discount rate, employee turnover, rate of pre-65 retirement, spouse-age difference), estimates of postretirement benefit costs may have a large margin of error. Is the information relevant, reliable, or verifiable? The FASB concluded that “the obligation to provide postretirement benefits meets the definition of a liability, is representationally faithful, is relevant to financial statement users, and can be measured with sufficient reliability at a justifiable cost.” [12] Failure to accrue an obligation and an expense prior to payment of benefits would result in an unfaithful representation of what financial statements should represent.

The FASB took a momentous step by requiring recognition of a postretirement liability. Many opposed the requirement, warning that the GAAP rules would devastate earnings. Others argued that putting these numbers on the balance sheet was inappropriate. Others noted that the requirement would force companies to curtail postretirement benefits to employees.

The authors believe that the FASB deserves special praise. Because the Board addressed this issue, companies now recognize the magnitude of these costs. This recognition has led to efforts to control escalating healthcare costs. As John Ruffle, a former president of the Financial Accounting Foundation noted, “The Board has done American industry a gigantic favor. Over the long term, industry will look back and say thanks.”

WHAT DO THE NUMBERS MEAN?

Many companies have underfunded pension and other postretirement plans. Unfortunately, many governmental entities also have the same problem but on a much larger scale. Here are some examples.

- The actual liabilities of the federal government—including Social Security, Medicare, and federal employees’ future retirement benefits—is estimated to be over \$100 trillion. When the accrued expenses of the government’s entitled programs are counted, we need to collect well over \$8 trillion in tax revenues annually. Even if you take all the taxable income of corporations and of individuals earning over approximately \$66,000, that still falls short of the \$8 trillion.
- A State Budget Crisis Task Force declared underfunded retirement promises as one of the six major threats to states’ “fiscal sustainability.”
- State-run pension funds faced a \$968 billion shortfall in 2013, up \$54 billion from 2012. When local pension shortfalls are factored in, the total pension funding gap surpasses \$1 trillion.

WANT SOME BAD NEWS?

So what does all this have to do with accounting? Similar to the FASB, there is an organization called the Governmental Accounting Standards Board (GASB), which establishes standards of financial accounting and reporting for state and local governmental agencies.

Until recently, the GASB went about its work in relative obscurity. How did the GASB get everyone’s attention? It recently required that governmental units recognize postretirement benefits on their balance sheets on an accrual basis. Some states do not like this requirement and have proposed legislation that will allow them to ignore GASB standards. However, the GASB, with the support of users of government reports, has pushed for the change. They are concerned that without the new requirements, governments will continue to misrepresent the true cost of their retirement-related promises to public employees. In their view, the new accounting rules are in the best interests of municipal bondholders and the public in general. Thus, it appears that the FASB is not the only standard-setter subject to political pressure.

LEARNING OBJECTIVES REVIEW

1 Understand the fundamentals of pension plan accounting. The company or employer is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The fund or plan is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the pension recipients (retired employees). The fund should be a separate legal and accounting entity; it maintains a set of books and prepares financial statements.

The two most common types of pension arrangements are as follows. **(1) Defined contribution plans:** The employer agrees to contribute to a pension trust a certain sum each period based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. Only the employer's contribution is defined; no promise is made regarding the ultimate benefits paid out to the employees. **(2) Defined benefit plans:** These plans define the benefits that the employee will receive at the time of retirement. The formula typically provides for the benefits to be a function of the employee's years of service and the compensation level when he or she nears retirement.

Alternative measures for valuing the pension obligation may be used. One measure bases the pension obligation only on the benefits vested to the employees. Vested benefits are those that the employee is entitled to receive even if he or she renders no additional services under the plan. Companies compute the **vested benefit pension obligation** using current salary levels; this obligation includes only vested benefits. Another measure of the obligation, called the **accumulated benefit obligation**, computes the deferred compensation amount based on all years of service performed by employees under the plan—both vested and nonvested—using current salary levels. A third measure, called the **projected benefit obligation**, bases the computation of the deferred compensation amount on both vested and nonvested service using future salaries.

Pension expense is a function of the following components: (1) service cost, (2) interest on the liability, (3) return on plan assets, (4) amortization of prior service cost, and (5) gain or loss.

2 Use a worksheet for employer's pension plan entries. Companies may use a worksheet unique to pension accounting. This worksheet records both the formal entries and the memo entries to keep track of all the employer's relevant pension plan items and components.

3 Describe the accounting and amortization of prior service costs. An actuary computes the amount of the prior service cost, and the company then records it as an adjustment to the projected benefit obligation and other comprehensive income. It then amortizes it, generally using a "years-of-service" amortization method, similar to a units-of-production computation. First, the company computes total estimated number of service-years to be worked by all of the participating employees. Second, it divides the accumulated prior service cost by the total number of service-years, to obtain a cost per service-year (the unit cost). Third, the company multiplies the number of service-years consumed each year times the cost per service-year, to obtain the annual amortization charge.

4 Explain the accounting and amortization for unexpected gains and losses. In estimating the projected benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate,

disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the projected benefit obligation. These unexpected gains or losses from changes in the projected benefit obligation are liability gains and losses. Liability gains result from unexpected decreases in the liability balance; liability losses result from unexpected increases. Companies also incur asset gains or losses. Both types of actuarial gains and losses are recorded in other comprehensive income and adjust either the projected benefit obligation or the plan assets.

The FASB set a limit for the size of an accumulated net gain or loss balance. That arbitrarily selected limit (called a **corridor**) is 10 percent of the larger of the beginning balances of the projected benefit obligation or the market-related value of the plan assets. Beyond that limit, an accumulated net gain or loss balance is considered too large and must be amortized. If the balance of the accumulated net gain or loss account stays within the upper and lower limits of the corridor, no amortization is required.

5 Describe the requirements for reporting pension plans in financial statements. Currently, companies must disclose the following pension plan information in their financial statements. (1) The components of pension expense for the period. (2) A schedule showing changes in the benefit obligation and plan assets during the year. (3) The amount of prior service cost and net gains and losses in accumulated OCI, including the estimated prior service cost and gains and losses that will affect net income in the next year. (4) The weighted-average assumed discount rate, the rate of compensation increase used to measure the projected benefit obligation, and the weighted-average expected long-term rate of return on plan assets. (5) A table showing the allocation of pension plan assets by category and the percentage of the fair value to total plan assets. (6) The expected benefit payments for current plan participants for each of the next five fiscal years and for the following five years in aggregate, along with an estimate of expected contributions to the plan during the next year.

***6 Identify the differences between pensions and postretirement healthcare benefits.** Pension plans are generally funded, but healthcare benefit plans are not. Pension benefits are generally well-defined and level in amount; healthcare benefits are generally uncapped and variable. Pension benefits are payable monthly; healthcare benefits are paid as needed and used. Pension plan variables are reasonably predictable, whereas healthcare plan variables are difficult to predict.

***7 Contrast accounting for pensions to accounting for other postretirement benefits.** Many of the basic concepts, accounting terminology, and measurement methodology that apply to pensions also apply to other postretirement benefit accounting. Because other postretirement benefit plans are unfunded, large obligations can occur. Two significant concepts peculiar to accounting for other postretirement benefits are (1) expected postretirement benefit obligation (EPBO) and (2) accumulated postretirement benefit obligation (APBO).

ENHANCED REVIEW AND PRACTICE

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

PRACTICE PROBLEM

Jablonski Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2017, the following balances related to this plan.

Plan assets (market-related value)	\$170,000
Projected benefit obligation	340,000
Pension asset/liability	170,000 Cr.
Prior service cost	100,000
OCI—Loss	39,000

As a result of the operation of the plan during 2017, the actuary provided the following additional data at December 31, 2017.

Service cost for 2017	\$45,000
Actual return on plan assets in 2017	27,000
Amortization of prior service cost	20,000
Contributions in 2017	85,000
Benefits paid retirees in 2017	51,000
Settlement rate	7%
Expected return on plan assets	8%
Average remaining service life of active employees	10 years

Instructions

- Compute pension expense for Jablonski Corp. for the year 2017 by preparing a pension worksheet that shows the journal entry for pension expense.
- Indicate the pension amounts reported in the financial statements.

27	**** $(\$39,000 - \$34,000) = \$5,000 \div 10 = \500							

2017

Pension Expense	75,700
Pension Asset/Liability	43,200
Other Comprehensive Income (PSC)	20,000
Other Comprehensive Income (G/L)	13,900
Cash	85,000

(b) The pension amounts reported in the 2017 financial statements are as follows.

Income Statement

Pension expense	\$ 75,700
-----------------	-----------

Comprehensive Income Statement

Net income	\$ XXXX
Other comprehensive income	
Asset gain	\$13,400
Amortization of loss	500
Prior service cost amortization	20,000
Comprehensive income	<u>\$ XXXX</u>

Balance Sheet

Liabilities	
Pension liability	\$126,800
Stockholders' equity	
Accumulated other comprehensive loss (PSC)	80,000
Accumulated other comprehensive loss (G/L)	25,100

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

1. What is a private pension plan? How does a contributory pension plan differ from a noncontributory plan?
2. Differentiate between a defined contribution pension plan and a defined benefit pension plan. Explain how the employer's obligation differs between the two types of plans.
3. Differentiate between "accounting for the employer" and "accounting for the pension fund."
4. The meaning of the term "fund" depends on the context in which it is used. Explain its meaning when used as a noun. Explain its meaning when it is used as a verb.
5. What is the role of an actuary relative to pension plans? What are actuarial assumptions?
6. What factors must be considered by the actuary in measuring the amount of pension benefits under a defined benefit plan?
7. Name three approaches to measuring benefit obligations from a pension plan and explain how they differ.
8. Explain how cash-basis accounting for pension plans differs from accrual-basis accounting for pension plans. Why is cash-basis accounting generally considered unacceptable for pension plan accounting?
9. Identify the five components that comprise pension expense. Briefly explain the nature of each component.
10. What is service cost, and what is the basis of its measurement?
11. In computing the interest component of pension expense, what interest rates may be used?
12. Explain the difference between service cost and prior service cost.
13. What is meant by "prior service cost"? When is prior service cost recognized as pension expense?
14. What are "liability gains and losses," and how are they accounted for?
15. If pension expense recognized in a period exceeds the current amount funded by the employer, what kind of account arises, and how should it be reported in the financial statements? If the reverse occurs—that is, current funding by the employer exceeds the amount recognized as pension expense—what kind of account arises, and how should it be reported?
16. Given the following items and amounts, compute the actual return on plan assets: fair value of plan assets at the beginning of the period \$9,500,000; benefits paid during the period \$1,400,000; contributions made during the period \$1,000,000; and fair value of the plan assets at the end of the period \$10,150,000.
17. How does an "asset gain or loss" develop in pension accounting? How does a "liability gain or loss" develop in pension accounting?
18. What is the meaning of "corridor amortization"?
19. At the end of the current period, Agler Inc. had a projected benefit obligation of \$400,000 and pension plan assets (at fair value) of \$350,000. What are the accounts and amounts that will be reported on the company's balance sheet as pension assets or pension liabilities?
20. At the end of the current year, Pociak Co. has prior service cost of \$9,150,000. Where should the prior service cost be reported on the balance sheet?
21. Describe the accounting for actuarial gains and losses.
22. Boey Company reported net income of \$25,000 in 2018. It had the following amounts related to its pension plan in 2018: Actuarial liability gain \$10,000; Unexpected asset loss \$14,000; Accumulated other comprehensive income (G/L) (beginning balance), zero. Determine for 2018 (a) Boey's other comprehensive income, and (b) comprehensive income.
23. Describe the reporting of pension plans for a company with multiple plans, some of which are underfunded and some of which are overfunded.
24. Determine the meaning of the following terms.
 - (a) Contributory plan.
 - (b) Vested benefits.
 - (c) Retroactive benefits.
 - (d) Years-of-service method.
25. A headline in the *Wall Street Journal* stated, "Firms Increasingly Tap Their Pension Funds to Use Excess Assets." What is the accounting issue related to the use of these "excess assets" through plan terminations?
- *26. What are postretirement benefits other than pensions?
- *27. Why didn't the FASB cover both types of postretirement benefits—pensions and healthcare—in the earlier pension accounting rules?
- *28. What are the major differences between postretirement healthcare benefits and pension benefits?
- *29. What is the difference between the APBO and the EPBO? What are the components of postretirement expense?

BRIEF EXERCISES

BE20-1 (L01) AMR Corporation (parent company of American Airlines) reported the following (in millions).

Service cost	\$366
Interest on P.B.O.	737
Return on plan assets	593
Amortization of prior service cost	13
Amortization of net loss	154

Compute AMR Corporation's pension expense.

BE20-2 (L01) For Warren Corporation, year-end plan assets were \$2,000,000. At the beginning of the year, plan assets were \$1,780,000. During the year, contributions to the pension fund were \$120,000, and benefits paid were \$200,000. Compute Warren's actual return on plan assets.

BE20-3 (L02) At January 1, 2017, Hennein Company had plan assets of \$280,000 and a projected benefit obligation of the same amount. During 2017, service cost was \$27,500, the settlement rate was 10%, actual and expected return on plan assets were \$25,000, contributions were \$20,000, and benefits paid were \$17,500. Prepare a pension worksheet for Hennein Company for 2017.

BE20-4 (L02) Campbell Soup Company reported pension expense of \$73 million and contributed \$71 million to the pension fund. Prepare Campbell Soup Company's journal entry to record pension expense and funding, assuming Campbell has no OCI amounts.

BE20-5 (L03) Mancuso Corporation amended its pension plan on January 1, 2017, and granted \$160,000 of prior service costs to its employees. The employees are expected to provide 2,000 service years in the future, with 350 service years in 2017. Compute prior service cost amortization for 2017.

BE20-6 (L03) At December 31, 2017, Besler Corporation had a projected benefit obligation of \$560,000, plan assets of \$322,000, and prior service cost of \$127,000 in accumulated other comprehensive income. Determine the pension asset/liability at December 31, 2017.

BE20-7 (L04) Shin Corporation had a projected benefit obligation of \$3,100,000 and plan assets of \$3,300,000 at January 1, 2017. Shin also had a net actuarial loss of \$465,000 in accumulated OCI at January 1, 2017. The average remaining service period of Shin's employees is 7.5 years. Compute Shin's minimum amortization of the actuarial loss.

BE20-8 (L05) Hawkins Corporation has the following balances at December 31, 2017.

Projected benefit obligation	\$2,600,000
Plan assets at fair value	2,000,000
Accumulated OCI (PSC)	1,100,000

How should these balances be reported on Hawkins' balance sheet at December 31, 2017?

BE20-9 (L05) Norton Co. had the following amounts related to its pension plan in 2017.

Actuarial liability loss for 2017	\$28,000
Unexpected asset gain for 2017	18,000
Accumulated other comprehensive income (G/L) (beginning balance)	7,000 Cr.

Determine for 2017 (a) Norton's other comprehensive income (loss) and (b) comprehensive income. Net income for 2017 is \$26,000; no amortization of gain or loss is necessary in 2017.

BE20-10 (L05) Lahey Corp. has three defined benefit pension plans as follows.

	Pension Assets (at Fair Value)	Projected Benefit Obligation
Plan X	\$600,000	\$500,000
Plan Y	900,000	720,000
Plan Z	550,000	700,000

How will Lahey report these multiple plans in its financial statements?

***BE20-11 (L06,7)** Manno Corporation has the following information available concerning its postretirement benefit plan for 2017.

Service cost	\$40,000
Interest cost	47,400
Actual and expected return on plan assets	26,900

Compute Manno's 2017 postretirement expense.

***BE20-12 (L06,7)** For 2017, Sampsell Inc. computed its annual postretirement expense as \$240,900. Sampsell's contribution to the plan during 2017 was \$180,000. Prepare Sampsell's 2017 entry to record postretirement expense, assuming Sampsell has no OCI amounts.

EXERCISES

E20-1 (L01,2) EXCEL (Pension Expense, Journal Entries) The following information is available for the pension plan of Radcliffe Company for the year 2017.

Actual and expected return on plan assets	\$ 15,000
Benefits paid to retirees	40,000
Contributions (funding)	90,000
Interest/discount rate	10%
Prior service cost amortization	8,000
Projected benefit obligation, January 1, 2017	500,000
Service cost	60,000

Instructions

- Compute pension expense for the year 2017.
- Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2017.

E20-2 (L01,2,3) (Computation of Pension Expense) Veldre Company provides the following information about its defined benefit pension plan for the year 2017.

Service cost	\$ 90,000
Contribution to the plan	105,000
Prior service cost amortization	10,000
Actual and expected return on plan assets	64,000
Benefits paid	40,000
Plan assets at January 1, 2017	640,000
Projected benefit obligation at January 1, 2017	700,000
Accumulated OCI (PSC) at January 1, 2017	150,000
Interest/discount (settlement) rate	10%

Instructions

Compute the pension expense for the year 2017.

E20-3 (L01,2,3) (Preparation of Pension Worksheet) Using the information in E20-2, prepare a pension worksheet inserting January 1, 2017, balances, showing December 31, 2017, balances, and the journal entry recording pension expense.

E20-4 (L01,2) (Basic Pension Worksheet) The following facts apply to the pension plan of Boudreau Inc. for the year 2017.

Plan assets, January 1, 2017	\$490,000
Projected benefit obligation, January 1, 2017	490,000
Settlement rate	8%
Service cost	40,000
Contributions (funding)	25,000
Actual and expected return on plan assets	49,700
Benefits paid to retirees	33,400

Instructions

Using the preceding data, compute pension expense for the year 2017. As part of your solution, prepare a pension worksheet that shows the journal entry for pension expense for 2017 and the year-end balances in the related pension accounts.

E20-5 (L03) (Application of Years-of-Service Method) Andrews Company has five employees participating in its defined benefit pension plan. Expected years of future service for these employees at the beginning of 2017 are as follows.

Employee	Future Years of Service
Jim	3
Paul	4
Nancy	5
Dave	6
Kathy	6

On January 1, 2017, the company amended its pension plan, increasing its projected benefit obligation by \$72,000.

1164 Chapter 20 Accounting for Pensions and Postretirement Benefits

Instructions

Compute the amount of prior service cost amortization for the years 2017 through 2022 using the years-of-service method, setting up appropriate schedules.

E20-6 (L01) (Computation of Actual Return) Gingrich Importers provides the following pension plan information.

Fair value of pension plan assets, January 1, 2017	\$2,400,000
Fair value of pension plan assets, December 31, 2017	2,725,000
Contributions to the plan in 2017	280,000
Benefits paid retirees in 2017	350,000

Instructions

From the data above, compute the actual return on the plan assets for 2017.

E20-7 (L01,2,3) EXCEL (Basic Pension Worksheet) The following defined pension data of Rydell Corp. apply to the year 2017.

Projected benefit obligation, 1/1/17 (before amendment)	\$560,000
Plan assets, 1/1/17	546,200
Pension liability	13,800
On January 1, 2017, Rydell Corp., through plan amendment, grants prior service benefits having a present value of	120,000
Settlement rate	9%
Service cost	58,000
Contributions (funding)	65,000
Actual (expected) return on plan assets	52,280
Benefits paid to retirees	40,000
Prior service cost amortization for 2017	17,000

Instructions

For 2017, prepare a pension worksheet for Rydell Corp. that shows the journal entry for pension expense and the year-end balances in the related pension accounts.

E20-8 (L04) (Application of the Corridor Approach) Kenseth Corp. has the following beginning-of-the-year present values for its projected benefit obligation and market-related values for its pension plan assets.

	Projected Benefit Obligation	Plan Assets Value
2016	\$2,000,000	\$1,900,000
2017	2,400,000	2,500,000
2018	2,950,000	2,600,000
2019	3,600,000	3,000,000

The average remaining service life per employee in 2016 and 2017 is 10 years and in 2018 and 2019 is 12 years. The net gain or loss that occurred during each year is as follows: 2016, \$280,000 loss; 2017, \$90,000 loss; 2018, \$11,000 loss; and 2019, \$25,000 gain. (In working the solution, the gains and losses must be aggregated to arrive at year-end balances.)

Instructions

Using the corridor approach, compute the amount of net gain or loss amortized and charged to pension expense in each of the four years, setting up an appropriate schedule.

E20-9 (L05) (Disclosures: Pension Expense and Other Comprehensive Income) Taveras Enterprises provides the following information relative to its defined benefit pension plan.

<u>Balances or Values at December 31, 2017</u>	
Projected benefit obligation	\$2,737,000
Accumulated benefit obligation	1,980,000
Fair value of plan assets	2,278,329
Accumulated OCI (PSC)	210,000
Accumulated OCI—Net loss (1/1/17 balance, –0–)	45,680
Pension liability	458,671
Other pension plan data for 2017:	
Service cost	94,000
Prior service cost amortization	42,000
Actual return on plan assets	130,000
Expected return on plan assets	175,680
Interest on January 1, 2017, projected benefit obligation	253,000
Contributions to plan	93,329
Benefits paid	140,000

Instructions

- Prepare the note disclosing the components of pension expense for the year 2017.
- Determine the amounts of other comprehensive income and comprehensive income for 2017. Net income for 2017 is \$35,000.
- Compute the amount of accumulated other comprehensive income reported at December 31, 2017.

E20-10 (L01,2,3,4) (Pension Worksheet) Webb Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2017, the following balances relate to this plan.

Plan assets	\$480,000
Projected benefit obligation	600,000
Pension asset/liability	120,000
Accumulated OCI (PSC)	100,000 Dr.

As a result of the operation of the plan during 2017, the following additional data are provided by the actuary.

Service cost	\$90,000
Settlement rate, 9%	
Actual return on plan assets	55,000
Amortization of prior service cost	19,000
Expected return on plan assets	52,000
Unexpected loss from change in projected benefit obligation, due to change in actuarial predictions	76,000
Contributions	99,000
Benefits paid retirees	85,000

Instructions

- Using the data above, compute pension expense for Webb Corp. for the year 2017 by preparing a pension worksheet.
- Prepare the journal entry for pension expense for 2017.

E20-11 (L01,2,3,4,5) (Pension Expense, Journal Entries, Statement Presentation) Henning Company sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the year 2017 in which no benefits were paid.

- The actuarial present value of future benefits earned by employees for services rendered in 2017 amounted to \$56,000.
- The company's funding policy requires a contribution to the pension trustee amounting to \$145,000 for 2017.
- As of January 1, 2017, the company had a projected benefit obligation of \$900,000, an accumulated benefit obligation of \$800,000, and a debit balance of \$400,000 in accumulated OCI (PSC). The fair value of pension plan assets amounted to \$600,000 at the beginning of the year. The actual and expected return on plan assets was \$54,000. The settlement rate was 9%. No gains or losses occurred in 2017 and no benefits were paid.
- Amortization of prior service cost was \$50,000 in 2017. Amortization of net gain or loss was not required in 2017.

Instructions

- Determine the amounts of the components of pension expense that should be recognized by the company in 2017.
- Prepare the journal entry or entries to record pension expense and the employer's contribution to the pension trustee in 2017.
- Indicate the amounts that would be reported on the income statement and the balance sheet for the year 2017.

E20-12 (L01,2,3,4,5) (Pension Expense, Journal Entries, Statement Presentation) Ferreri Company received the following selected information from its pension plan trustee concerning the operation of the company's defined benefit pension plan for the year ended December 31, 2017.

	January 1, 2017	December 31, 2017
Projected benefit obligation	\$1,500,000	\$1,527,000
Market-related and fair value of plan assets	800,000	1,130,000
Accumulated benefit obligation	1,600,000	1,720,000
Accumulated OCI (G/L)—Net gain	—0—	(200,000)

The service cost component of pension expense for employee services rendered in the current year amounted to \$77,000 and the amortization of prior service cost was \$120,000. The company's actual funding (contributions) of the plan in 2017 amounted to \$250,000. The expected return on plan assets and the actual rate were both 10%; the interest/discount (settlement) rate was 10%. Accumulated other comprehensive income (PSC) had a balance of \$1,200,000 on January 1, 2017. Assume no benefits paid in 2017.

Instructions

- Determine the amounts of the components of pension expense that should be recognized by the company in 2017.
- Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2017.
- Indicate the pension-related amounts that would be reported on the income statement and the balance sheet for Ferreri Company for the year 2017.

1166 Chapter 20 Accounting for Pensions and Postretirement Benefits

E20-13 (L01,2,4) (Computation of Actual Return, Gains and Losses, Corridor Test, and Pension Expense) Erickson Company sponsors a defined benefit pension plan. The corporation's actuary provides the following information about the plan.

	January 1, 2017	December 31, 2017
Vested benefit obligation	\$1,500	\$1,900
Accumulated benefit obligation	1,900	2,730
Projected benefit obligation	2,500	3,300
Plan assets (fair value)	1,700	2,620
Settlement rate and expected rate of return		10%
Pension asset/liability	800	?
Service cost for the year 2017		400
Contributions (funding in 2017)		700
Benefits paid in 2017		200

Instructions

- Compute the actual return on the plan assets in 2017.
- Compute the amount of the other comprehensive income (G/L) as of December 31, 2017. (Assume the January 1, 2017, balance was zero.)
- Compute the amount of net gain or loss amortization for 2017 (corridor approach).
- Compute pension expense for 2017.

E20-14 (L01,2,4) (Worksheet for E20-13) Using the information in E20-13 about Erickson Company's defined benefit pension plan, prepare a 2017 pension worksheet with supplementary schedules of computations. Prepare the journal entries at December 31, 2017, to record pension expense and related pension transactions. Also, indicate the pension amounts reported in the balance sheet.

E20-15 (L01,2,5) (Pension Expense, Journal Entries) Latoya Company provides the following selected information related to its defined benefit pension plan for 2017.

Pension asset/liability (January 1)	\$ 25,000 Cr.
Accumulated benefit obligation (December 31)	400,000
Actual and expected return on plan assets	10,000
Contributions (funding) in 2017	150,000
Fair value of plan assets (December 31)	800,000
Settlement rate	10%
Projected benefit obligation (January 1)	700,000
Service cost	80,000

Instructions

- Compute pension expense and prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2017. Preparation of a pension worksheet is not required. Benefits paid in 2017 were \$35,000.
- Indicate the pension-related amounts that would be reported in the company's income statement and balance sheet for 2017.

E20-16 (L04) (Amortization of Accumulated OCI (G/L), Corridor Approach, Pension Expense Computation) The actuary for the pension plan of Gustafson Inc. calculated the following net gains and losses.

Incurred during the Year	(Gain) or Loss
2017	\$300,000
2018	480,000
2019	(210,000)
2020	(290,000)

Other information about the company's pension obligation and plan assets is as follows.

As of January 1,	Projected Benefit Obligation	Plan Assets (market-related asset value)
2017	\$4,000,000	\$2,400,000
2018	4,520,000	2,200,000
2019	5,000,000	2,600,000
2020	4,240,000	3,040,000

Gustafson Inc. has a stable labor force of 400 employees who are expected to receive benefits under the plan. The total service-years for all participating employees is 5,600. The beginning balance of accumulated OCI (G/L) is zero on January 1, 2017. The market-related value and the fair value of plan assets are the same for the 4-year period. Use the average remaining service life per employee as the basis for amortization.

1168 Chapter 20 Accounting for Pensions and Postretirement Benefits

Instructions

- Determine the missing amounts in the 2017 pension worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2017 pension expense for Usher Inc.
- The accounting staff has heard of a pension accounting procedure called "corridor amortization." Is Usher required to record any amounts for corridor amortization in (1) 2017? In (2) 2018? Explain.

***E20-19 (L06,7) (Postretirement Benefit Expense Computation)** Kreter Co. provides the following information about its postretirement benefit plan for the year 2017.

Service cost	\$ 45,000
Contribution to the plan	10,000
Actual and expected return on plan assets	11,000
Benefits paid	20,000
Plan assets at January 1, 2017	110,000
Accumulated postretirement benefit obligation at January 1, 2017	330,000
Discount rate	8%

Instructions

Compute the postretirement benefit expense for 2017.

***E20-20 (L06,7) (Postretirement Benefit Worksheet)** Using the information in E20-19, prepare a worksheet inserting January 1, 2017, balances, and showing December 31, 2017, balances. Prepare the journal entry recording postretirement benefit expense.

***E20-21 (L06,7) (Postretirement Benefit Expense Computation)** Garner Inc. provides the following information related to its postretirement benefits for the year 2017.

Accumulated postretirement benefit obligation at January 1, 2017	\$710,000
Actual and expected return on plan assets	34,000
Prior service cost amortization	21,000
Discount rate	10%
Service cost	83,000

Instructions

Compute postretirement benefit expense for 2017.

***E20-22 (L06,7) (Postretirement Benefit Expense Computation)** Englehart Co. provides the following information about its postretirement benefit plan for the year 2017.

Service cost	\$ 90,000
Prior service cost amortization	3,000
Contribution to the plan	56,000
Actual and expected return on plan assets	62,000
Benefits paid	40,000
Plan assets at January 1, 2017	710,000
Accumulated postretirement benefit obligation at January 1, 2017	760,000
Accumulated OCI (PSC) at January 1, 2017	100,000 Dr.
Discount rate	9%

Instructions

Compute the postretirement benefit expense for 2017.

***E20-23 (L06,7) (Postretirement Benefit Worksheet)** Using the information in E20-22, prepare a worksheet inserting January 1, 2017, balances, showing December 31, 2017, balances, and the journal entry recording postretirement benefit expense.

***E20-24 (L06,7) (Postretirement Benefit Worksheet—Missing Amounts)** The accounting staff of Holder Inc. has prepared the following postretirement benefit worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2017.

Postretirement Benefit Worksheet—Holder Inc.xls

17							

Instructions

- Determine the missing amounts in the 2017 postretirement worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2017 postretirement expense for Holder Inc.
- What discount rate is Holder using in accounting for the interest on its other postretirement benefit plan? Explain.

PROBLEMS

P20-1 (L01,2,3,4) EXCEL (2-Year Worksheet) On January 1, 2017, Harrington Company has the following defined benefit pension plan balances.

Projected benefit obligation	\$4,500,000
Fair value of plan assets	4,200,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2018, the company amends its pension agreement so that prior service costs of \$500,000 are created. Other data related to the pension plan are as follows.

	2017	2018
Service cost	\$150,000	\$180,000
Prior service cost amortization	—	90,000
Contributions (funding) to the plan	240,000	285,000
Benefits paid	200,000	280,000
Actual return on plan assets	252,000	260,000
Expected rate of return on assets	6%	8%

Instructions

- Prepare a pension worksheet for the pension plan for 2017 and 2018.
- For 2018, prepare the journal entry to record pension-related amounts.

P20-2 (L01,2,3,4,5) GROUPWORK (3-Year Worksheet, Journal Entries, and Reporting) Jackson Company adopts acceptable accounting for its defined benefit pension plan on January 1, 2016, with the following beginning balances: plan assets \$200,000; projected benefit obligation \$250,000. Other data relating to 3 years' operation of the plan are as follows.

1170 Chapter 20 Accounting for Pensions and Postretirement Benefits

	2016	2017	2018
Annual service cost	\$16,000	\$ 19,000	\$ 26,000
Settlement rate and expected rate of return	10%	10%	10%
Actual return on plan assets	18,000	22,000	24,000
Annual funding (contributions)	16,000	40,000	48,000
Benefits paid	14,000	16,400	21,000
Prior service cost (plan amended, 1/1/17)		160,000	
Amortization of prior service cost		54,400	41,600
Change in actuarial assumptions establishes a December 31, 2018, projected benefit obligation of:			520,000

Instructions

- Prepare a pension worksheet presenting all 3 years' pension balances and activities.
- Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- Indicate the pension-related amounts reported in the financial statements for 2018.

P20-3 (LO1,2,3,4,5) (Pension Expense, Journal Entries, Amortization of Loss) Gottschalk Company sponsors a defined benefit plan for its 100 employees. On January 1, 2017, the company's actuary provided the following information.

Accumulated other comprehensive loss (PSC)	\$150,000
Pension plan assets (fair value and market-related asset value)	200,000
Accumulated benefit obligation	260,000
Projected benefit obligation	380,000

The average remaining service period for the participating employees is 10 years. All employees are expected to receive benefits under the plan. On December 31, 2017, the actuary calculated that the present value of future benefits earned for employee services rendered in the current year amounted to \$52,000; the projected benefit obligation was \$490,000; fair value of pension assets was \$276,000; the accumulated benefit obligation amounted to \$365,000. The expected return on plan assets and the discount rate on the projected benefit obligation were both 10%. The actual return on plan assets is \$11,000. The company's current year's contribution to the pension plan amounted to \$65,000. No benefits were paid during the year.

Instructions

- Determine the components of pension expense that the company would recognize in 2017. (With only one year involved, you need not prepare a worksheet.)
- Prepare the journal entry to record the pension expense and the company's funding of the pension plan in 2017.
- Compute the amount of the 2017 increase/decrease in gains or losses and the amount to be amortized in 2017 and 2018.
- Indicate the pension amounts reported in the financial statement as of December 31, 2017.

P20-4 (LO1,2,3,4) EXCEL (Pension Expense, Journal Entries for 2 Years) Gordon Company sponsors a defined benefit pension plan. The following information related to the pension plan is available for 2017 and 2018.

	2017	2018
Plan assets (fair value), December 31	\$699,000	\$849,000
Projected benefit obligation, January 1	700,000	800,000
Pension asset/liability, January 1	140,000 Cr.	?
Prior service cost, January 1	250,000	240,000
Service cost	60,000	90,000
Actual and expected return on plan assets	24,000	30,000
Amortization of prior service cost	10,000	12,000
Contributions (funding)	115,000	120,000
Accumulated benefit obligation, December 31	500,000	550,000
Interest/settlement rate	9%	9%

Instructions

- Compute pension expense for 2017 and 2018.
- Prepare the journal entries to record the pension expense and the company's funding of the pension plan for both years.

P20-5 (LO2,3,4) (Computation of Pension Expense, Amortization of Net Gain or Loss—Corridor Approach, Journal Entries for 3 Years) Hiatt Toothpaste Company initiates a defined benefit pension plan for its 50 employees on January 1, 2017. The insurance company which administers the pension plan provided the following selected information for the years 2017, 2018, and 2019.

	For Year Ended December 31,		
	2017	2018	2019
Plan assets (fair value)	\$50,000	\$ 85,000	\$180,000
Accumulated benefit obligation	45,000	165,000	292,000
Projected benefit obligation	60,000	200,000	324,000
Net (gain) loss (for purposes of corridor calculation)	-0-	78,400	81,033
Employer's funding contribution (made at end of year)	50,000	60,000	105,000

There were no balances as of January 1, 2017, when the plan was initiated. The actual and expected return on plan assets was 10% over the 3-year period, but the settlement rate used to discount the company's pension obligation was 13% in 2017, 11% in 2018, and 8% in 2019. The service cost component of net periodic pension expense amounted to the following: 2017, \$60,000; 2018, \$85,000; and 2019, \$119,000. The average remaining service life per employee is 12 years. No benefits were paid in 2017, \$30,000 of benefits were paid in 2018, and \$18,500 of benefits were paid in 2019 (all benefits paid at end of year).

Instructions

(Round to the nearest dollar.)

- Calculate the amount of net periodic pension expense that the company would recognize in 2017, 2018, and 2019.
- Prepare the journal entries to record net periodic pension expense, employer's funding contribution, and related pension amounts for the years 2017, 2018, and 2019.

P20-6 (LO3,4) GROUPWORK (Computation of Prior Service Cost Amortization, Pension Expense, Journal Entries, and Net Gain or Loss) Aykroyd Inc. has sponsored a noncontributory, defined benefit pension plan for its employees since 1994. Prior to 2017, cumulative net pension expense recognized equaled cumulative contributions to the plan. Other relevant information about the pension plan on January 1, 2017, is as follows.

- The company has 200 employees. All these employees are expected to receive benefits under the plan. The average remaining service life per employee is 12 years.
- The projected benefit obligation amounted to \$5,000,000 and the fair value of pension plan assets was \$3,000,000. The market-related asset value was also \$3,000,000. Unrecognized prior service cost was \$2,000,000.

On December 31, 2017, the projected benefit obligation and the accumulated benefit obligation were \$4,850,000 and \$4,025,000, respectively. The fair value of the pension plan assets amounted to \$4,100,000 at the end of the year. A 10% settlement rate and a 10% expected asset return rate were used in the actuarial present value computations in the pension plan. The present value of benefits attributed by the pension benefit formula to employee service in 2017 amounted to \$200,000. The employer's contribution to the plan assets amounted to \$775,000 in 2017. This problem assumes no payment of pension benefits.

Instructions

(Round all amounts to the nearest dollar.)

- Prepare a schedule, based on the average remaining life per employee, showing the prior service cost that would be amortized as a component of pension expense for 2017, 2018, and 2019.
- Compute pension expense for the year 2017.
- Compute the amount of the 2017 increase/decrease in net gains or losses and the amount to be amortized in 2017 and 2018.
- Prepare the journal entries required to report the accounting for the company's pension plan for 2017.

P20-7 (LO2,3,4) (Pension Worksheet) Hanson Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2017, the following balances related to this plan.

Plan assets (market-related value)	\$520,000
Projected benefit obligation	700,000
Pension asset/liability	180,000 Cr.
Prior service cost	81,000
Net gain or loss (debit)	91,000

As a result of the operation of the plan during 2017, the actuary provided the following additional data for 2017.

Service cost	\$108,000
Settlement rate, 9%; expected return rate, 10%	
Actual return on plan assets	48,000
Amortization of prior service cost	25,000
Contributions	133,000
Benefits paid retirees	85,000
Average remaining service life of active employees	10 years

1172 Chapter 20 Accounting for Pensions and Postretirement Benefits**Instructions**

Using the preceding data, compute pension expense for Hanson Corp. for the year 2017 by preparing a pension worksheet that shows the journal entry for pension expense. Use the market-related asset value to compute the expected return and for corridor amortization.

P20-8 (LO1,2,3,4,5) GROUPWORK (Comprehensive 2-Year Worksheet) Lemke Company sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the years 2017 and 2018.

	2017	2018
Projected benefit obligation, January 1	\$600,000	
Plan assets (fair value and market-related value), January 1	410,000	
Pension asset/liability, January 1	190,000 Cr.	
Prior service cost, January 1	160,000	
Service cost	40,000	\$ 59,000
Settlement rate	10%	10%
Expected rate of return	10%	10%
Actual return on plan assets	36,000	61,000
Amortization of prior service cost	70,000	50,000
Annual contributions	97,000	81,000
Benefits paid retirees	31,500	54,000
Increase in projected benefit obligation due to changes in actuarial assumptions	87,000	–0–
Accumulated benefit obligation at December 31	721,800	789,000
Average service life of all employees		20 years
Vested benefit obligation at December 31		464,000

Instructions

- Prepare a pension worksheet presenting both years 2017 and 2018 and accompanying computations and amortization of the loss (2018) using the corridor approach.
- Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- For 2018, indicate the pension amounts reported in the financial statements.

P20-9 (LO1,2,3,4,5) GROUPWORK (Comprehensive 2-Year Worksheet) Hobbs Co. has the following defined benefit pension plan balances on January 1, 2017.

Projected benefit obligation	\$4,600,000
Fair value of plan assets	4,600,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2018, the company amends its pension agreement so that prior service costs of \$600,000 are created. Other data related to the pension plan are:

	2017	2018
Service cost	\$150,000	\$170,000
Prior service cost amortization	–0–	90,000
Contributions (funding) to the plan	200,000	184,658
Benefits paid	220,000	280,000
Actual return on plan assets	252,000	350,000
Expected rate of return on assets	6%	8%

Instructions

- Prepare a pension worksheet for the pension plan in 2017.
- Prepare any journal entries related to the pension plan that would be needed at December 31, 2017.
- Prepare a pension worksheet for 2018 and any journal entries related to the pension plan as of December 31, 2018.
- Indicate the pension-related amounts reported in the 2018 financial statements.

P20-10 (LO1,2,3,4) (Pension Worksheet—Missing Amounts) Kramer Co. has prepared the following pension worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2017.

Pension Worksheet—Kramer Co.xls

18								

Instructions

- Determine the missing amounts in the 2017 pension worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2017 pension expense for Kramer Co.
- Determine the following for Kramer for 2017: (1) settlement rate used to measure the interest on the liability and (2) expected return on plan assets.

P20-11 (LO1,2,3,4,5) (Pension Worksheet) The following data relate to the operation of Kramer Co.'s pension plan in 2018. The pension worksheet for 2017 is provided in P20-10.

Service cost	\$59,000
Actual return on plan assets	32,000
Amortization of prior service cost	28,000
Annual contributions	51,000
Benefits paid retirees	27,000
Average service life of all employees	25 years

For 2018, Kramer will use the same assumptions as 2017 for the expected rate of returns on plan assets. The settlement rate for 2018 is 10%.

Instructions

- Prepare a pension worksheet for 2018 and accompanying computations and amortization of the loss, if any, in 2018 using the corridor approach.
- Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31.
- Indicate the pension amounts reported in the financial statements.

P20-12 (LO1,2,3,4,5) (Pension Worksheet) Larson Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2018, the following balances related to this plan.

Plan assets (market-related value)	\$270,000
Projected benefit obligation	340,000
Pension asset/liability	70,000 Cr.
Prior service cost	90,000
OCI—Loss	39,000

1174 Chapter 20 Accounting for Pensions and Postretirement Benefits

As a result of the operation of the plan during 2018, the actuary provided the following additional data for 2018.

Service cost	\$45,000
Actual return on plan assets	27,000
Amortization of prior service cost	12,000
Contributions	65,000
Benefits paid retirees	41,000
Settlement rate	7%
Expected return on plan assets	8%
Average remaining service life of active employees	10 years

Instructions

- Compute pension expense for Larson Corp. for the year 2018 by preparing a pension worksheet that shows the journal entry for pension expense.
- Indicate the pension amounts reported in the financial statements.

***P20-13 (LO6,7) GROUPWORK (Postretirement Benefit Worksheet)** Hollenbeck Foods Inc. sponsors a postretirement medical and dental benefit plan for its employees. The following balances relate to this plan on January 1, 2017.

Plan assets	\$200,000
Expected postretirement benefit obligation	820,000
Accumulated postretirement benefit obligation	200,000
No prior service costs or OCI balances exist.	

As a result of the plan's operation during 2017, the following additional data are provided by the actuary.

Service cost is \$70,000
Discount rate is 10%
Contributions to plan are \$65,000
Expected return on plan assets is \$10,000
Actual return on plan assets is \$15,000
Benefits paid to employees are \$44,000
Average remaining service to full eligibility: 20 years

Instructions

- Using the preceding data, compute the net periodic postretirement benefit cost for 2017 by preparing a worksheet that shows the journal entry for postretirement expense and the year-end balances in the related postretirement benefit memo accounts. (Assume that contributions and benefits are paid at the end of the year.)
- Prepare any journal entries related to the postretirement plan for 2017 and indicate the postretirement amounts reported in the financial statements for 2017.

***P20-14 (LO6,7) (Postretirement Benefit Worksheet—2 Years)** Elton Co. has the following postretirement benefit plan balances on January 1, 2017.

Accumulated postretirement benefit obligation	\$2,250,000
Fair value of plan assets	2,250,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2018, the company amends the plan so that prior service costs of \$175,000 are created. Other data related to the plan are:

	2017	2018
Service costs	\$ 75,000	\$ 85,000
Prior service costs amortization	—	12,000
Contributions (funding) to the plan	45,000	35,000
Benefits paid	40,000	45,000
Actual return on plan assets	140,000	120,000
Expected rate of return on assets	8%	6%

Instructions

- Prepare a worksheet for the postretirement plan in 2017.
- Prepare any journal entries related to the postretirement plan that would be needed at December 31, 2017.
- Prepare a worksheet for 2018 and any journal entries related to the postretirement plan as of December 31, 2018.
- Indicate the postretirement-benefit-related amounts reported in the 2018 financial statements.

CONCEPTS FOR ANALYSIS

CA20-1 (Pension Terminology and Theory) Many business organizations have been concerned with providing for the retirement of employees since the late 1800s. Increase in this concern resulted in the establishment of private pension plans in most large companies and in many medium- and small-sized ones.

The substantial growth of these plans, both in numbers of employees covered and in amounts of retirement benefits, has increased the significance of pension costs in relation to the financial position, results of operations, and cash flows of many companies. In examining the costs of pension plans, a CPA encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if generally accepted accounting principles are to be reflected in the financial statements of entities with pension plans.

Instructions

- (a) Define a private pension plan. How does a contributory pension plan differ from a noncontributory plan?
- (b) Differentiate between “accounting for the employer” and “accounting for the pension fund.”
- (c) Explain the terms “funded” and “pension liability” as they relate to:
 - (1) The pension fund.
 - (2) The employer.
- (d)
 - (1) Discuss the theoretical justification for accrual recognition of pension costs.
 - (2) Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.
- (e) Distinguish among the following as they relate to pension plans.
 - (1) Service cost.
 - (2) Prior service costs.
 - (3) Vested benefits.

CA20-2 WRITING (Pension Terminology) The following items appear on Brueggen Company’s financial statements.

1. Under the caption Assets:
Pension asset/liability.
2. Under the caption Liabilities:
Pension asset/liability.
3. Under the caption Stockholders’ Equity:
Prior service cost as a component of Accumulated Other Comprehensive Income.
4. On the income statement:
Pension expense.

Instructions

Explain the significance of each of the items above on corporate financial statements. (*Note:* All items set forth above are not necessarily to be found on the statements of a single company.)

CA20-3 (Basic Terminology) In examining the costs of pension plans, Helen Kaufman, CPA, encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if generally accepted accounting principles are to be reflected in the financial statements of entities with pension plans.

Instructions

- (a)
 - (1) Discuss the theoretical justification for accrual recognition of pension costs.
 - (2) Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.
- (b) Explain the following terms as they apply to accounting for pension plans.
 - (1) Market-related asset value.
 - (2) Projected benefit obligation.
 - (3) Corridor approach.
- (c) What information should be disclosed about a company’s pension plans in its financial statements and its notes?

(AICPA adapted)

CA20-4 WRITING (Major Pension Concepts) Davis Corporation is a medium-sized manufacturer of paperboard containers and boxes. The corporation sponsors a noncontributory, defined benefit pension plan that covers its 250 employees. Sid Cole has

1176 Chapter 20 Accounting for Pensions and Postretirement Benefits

recently been hired as president of Davis Corporation. While reviewing last year's financial statements with Carol Dilbeck, controller, Cole expressed confusion about several of the items in the footnote to the financial statements relating to the pension plan. In part, the footnote reads as follows.

Note J. The company has a defined benefit pension plan covering substantially all of its employees. The benefits are based on years of service and the employee's compensation during the last four years of employment. The company's funding policy is to contribute annually the maximum amount allowed under the federal tax code. Contributions are intended to provide for benefits expected to be earned in the future as well as those earned to date.

The net periodic pension expense on Davis Corporation's comparative income statement was \$72,000 in 2017 and \$57,680 in 2016.

The following are selected figures from the plan's funded status and amounts recognized in the Davis Corporation's Statement of Financial Position at December 31, 2017 (\$000 omitted).

Actuarial present value of benefit obligations:	
Accumulated benefit obligation (including vested benefits of \$636)	\$ (870)
Projected benefit obligation	\$(1,200)
Plan assets at fair value	<u>1,050</u>
Projected benefit obligation in excess of plan assets	<u>\$ (150)</u>

Given that Davis Corporation's work force has been stable for the last 6 years, Cole could not understand the increase in the net periodic pension expense. Dilbeck explained that the net periodic pension expense consists of several elements, some of which may increase or decrease the net expense.

Instructions

- The determination of the net periodic pension expense is a function of five elements. List and briefly describe each of the elements.
- Describe the major difference and the major similarity between the accumulated benefit obligation and the projected benefit obligation.
- Explain why pension gains and losses are not recognized on the income statement in the period in which they arise.
 - Briefly describe how pension gains and losses are recognized.

(AICPA adapted)

CA20-5 WRITING (Implications of GAAP Rules on Pensions) Jill Vogel and Pete Dell have to do a class presentation on GAAP rules for reporting pension information. In developing the class presentation, they decided to provide the class with a series of questions related to pensions and then discuss the answers in class. Given that the class has all read the rules related to pension accounting and reporting, they felt this approach would provide a lively discussion. Here are the questions:

- In an article in *Businessweek* prior to new rules related to pensions, it was reported that the discount rates used by the largest 200 companies for pension reporting ranged from 5% to 11%. How can such a situation exist, and does GAAP alleviate this problem?
- An article indicated that when new GAAP rules were issued related to pensions, it caused an increase in the liability for pensions for approximately 20% of companies. Why might this situation occur?
- A recent article noted that while "smoothing" is not necessarily an accounting virtue, pension accounting has long been recognized as an exception—an area of accounting in which at least some dampening of market swings is appropriate. This is because pension funds are managed so that their performance is insulated from the extremes of short-term market swings. A pension expense that reflects the volatility of market swings might, for that reason, convey information of little relevance. Are these statements true?
- Understanding the impact of the changes required in pension reporting requires detailed information about its pension plan(s) and an analysis of the relationship of many factors, particularly the:
 - Type of plan(s) and any significant amendments.
 - Plan participants.
 - Funding status.
 - Actuarial funding method and assumptions currently used.

What impact does each of these items have on financial statement presentation?

- An article noted "You also need to decide whether to amortize gains and losses using the corridor method, or to use some other systematic method. Under the corridor approach, only gains and losses in excess of 10% of the greater of the projected benefit obligation or the plan assets would have to be amortized." What is the corridor method and what is its purpose?

Instructions

What answers do you believe Jill and Pete gave to each of these questions?

CA20-6 WRITING (Gains and Losses, Corridor Amortization) Vickie Plato, accounting clerk in the personnel office of Streisand Corp., has begun to compute pension expense for 2019 but is not sure whether or not she should include the amortization of unrecognized gains/losses. She is currently working with the following beginning-of-the-year present values for the projected benefit obligation and market-related values for the pension plan:

	Projected Benefit Obligation	Plan Assets Value
2016	\$2,200,000	\$1,900,000
2017	2,400,000	2,500,000
2018	2,900,000	2,600,000
2019	3,900,000	3,000,000

The average remaining service life per employee in 2016 and 2017 is 10 years and in 2018 and 2019 is 12 years. The net gain or loss that occurred during each year is as follows.

2016	\$280,000 loss
2017	85,000 loss
2018	12,000 loss
2019	25,000 gain

(In working the solution, you must aggregate the unrecognized gains and losses to arrive at year-end balances.)

Instructions

You are the manager in charge of accounting. Write a memo to Vickie Plato, explaining why in some years she must amortize some of the net gains and losses and in other years she does not need to. In order to explain this situation fully, you must compute the amount of net gain or loss that is amortized and charged to pension expense in each of the 4 years listed above. Include an appropriate amortization schedule, referring to it whenever necessary.

CA20-7 ETHICS (Nonvested Employees—An Ethical Dilemma) Thinken Technology recently merged with College Electronix (CE), a computer graphics company. In performing a comprehensive audit of CE's accounting system, Gerald Ott, internal audit manager for Thinken Technology, discovered that the new subsidiary did not record pension assets and liabilities, subject to GAAP.

The net present value of CE's pension assets was \$15.5 million, the vested benefit obligation was \$12.9 million, and the projected benefit obligation was \$17.4 million. Ott reported this audit finding to Julie Habbe, the newly appointed controller of CE. A few days later, Habbe called Ott for his advice on what to do. Habbe started her conversation by asking, "Can't we eliminate the negative income effect of our pension dilemma simply by terminating the employment of nonvested employees before the end of our fiscal year?"

Instructions

How should Ott respond to Habbe's remark about firing nonvested employees?

USING YOUR JUDGMENT

Financial Reporting Problem**The Procter & Gamble Company (P&G)**

The financial statements of P&G are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- What kinds of pension plans does P&G provide its employees?
- What was P&G's pension expense for 2014, 2013, and 2012 related to its defined benefit plan?
- What is the impact of P&G's pension plans for 2014 on its financial statements?
- What information does P&G provide on the target allocation of its pension assets? (Compare the asset allocation for "Pensions and Other Retiree Benefits.") How do the allocations relate to the expected returns on these assets?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What kind of pension plans do Coca-Cola and PepsiCo provide their employees?
- What net periodic pension expense (cost) did Coca-Cola and PepsiCo report in 2014?
- What is the year-end 2014 funded status of Coca-Cola's and PepsiCo's plans (include international)?
- What relevant rates were used by Coca-Cola and PepsiCo in computing their pension amounts?
- Compare the expected benefit payments and contributions for Coca-Cola and PepsiCo.

*Financial Statement Analysis Case

General Electric

A *Wall Street Journal* article discussed a \$1.8 billion charge to income made by **General Electric** for postretirement benefit costs. It was attributed to previously unrecognized healthcare and life insurance cost. As financial vice president and controller for Peake, Inc., you found this article interesting because the president recently expressed interest in adopting a postemployment benefit program for Peake's employees, to complement the company's existing defined benefit plan. The president, Martha Beyerlein, wants to know how the expense on the new plan will be determined and what impact the accounting for the plan will have on Peake's financial statements.

Instructions

- As financial vice president and controller of Peake, Inc., explain the calculation of postemployment benefit expense under GAAP, and indicate how the accounting for the plan will affect Peake's financial statements.
- Discuss the similarities and differences in the accounting for the other postemployment benefit plan relative to the accounting for the defined benefit plan.

Accounting, Analysis, and Principles

PENCOMP's balance sheet at December 31, 2017, is as follows.

PENCOMP, INC. BALANCE SHEET AS OF DECEMBER 31, 2017			
<i>Assets</i>		<i>Liabilities</i>	
Cash	\$ 438	Notes payable	\$1,000
Inventory	<u>1,800</u>	Pension liability	<u>344</u>
Total current assets	<u>2,238</u>	Total liabilities	1,344
Plant and equipment	2,000	<i>Stockholders' equity</i>	
Accumulated depreciation	<u>(240)</u>	Common stock	2,000
	<u>1,760</u>	Retained earnings	896
Total assets	<u>\$3,998</u>	Accumulated other comprehensive income	<u>(242)</u>
		Total stockholders' equity	<u>2,654</u>
		Total liabilities and stockholders' equity	<u>\$3,998</u>
Additional information concerning PENCOMP's defined benefit pension plan is as follows.			
Projected benefit obligation at 12/31/17		\$ 820.5	
Plan assets (fair value) at 12/31/17		476.5	
Unamortized past service cost at 12/31/17		150.0	
Amortization of past service cost during 2018		15.0	
Service cost for 2018		42.0	
Discount rate		10%	
Expected rate of return on plan assets in 2018		12%	
Actual return on plan assets in 2018		10.4	
Contributions to pension fund in 2018		70.0	
Benefits paid during 2018		40.0	

Unamortized net loss due to changes in actuarial assumptions and deferred net losses on plan assets at 12/31/17	92.0
Expected remaining service life of employees	15.0
Average period to vesting of prior service costs	10.0
Other information about PENCOMP is as follows.	
Salary expense, all paid with cash during 2018	\$ 700.0
Sales, all for cash	3,000.0
Purchases, all for cash	2,000.0
Inventory at 12/31/18	1,800.0
Property originally cost \$2,000 and is depreciated on a straight-line basis over 25 years with no residual value.	
Interest on the note payable is 10% annually and is paid in cash on 12/31 of each year.	
Dividends declared and paid are \$200 in 2018.	

Accounting

Prepare an income statement for 2018 and a balance sheet as of December 31, 2018. Also, prepare the pension expense journal entry for the year ended December 31, 2018. Round to the nearest tenth (e.g., round 2.87 to 2.9).

Analysis

Compute return on equity for PENCOMP for 2018 (assume stockholders' equity is equal to year-end average stockholders' equity). Do you think an argument can be made for including some or even all of the change in accumulated other comprehensive income (due to pensions) in the numerator of return on equity? Illustrate that calculation.

Principles

Explain a rationale for why the FASB has (so far) decided to exclude from the current period income statement the effects of pension plan amendments and gains and losses due to changes in actuarial assumptions.

Codification Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE20-1 Access the glossary (“Master Glossary”) to answer the following.

- What is an accumulated benefit obligation?
- What is a defined benefit postretirement plan?
- What is the definition of “actuarial present value”?
- What is a prior service cost?

CE20-2 In general, how can an employer choose an appropriate discount rate for its pension plan? What information could an employer use in choosing a discount rate?

CE20-3 If an employer has a defined benefit pension plan, what components would make up its net periodic pension cost?

CE20-4 What information about its pension plan must a publicly traded company disclose in its interim financial statements?

Codification Research Case

Monat Company has grown rapidly since its founding in 2004. To instill loyalty in its employees, Monat is contemplating establishment of a defined benefit plan. Monat knows that lenders and potential investors will pay close attention to the impact of the pension plan on the company’s financial statements, particularly any gains or losses that develop in the plan. Monat has asked you to conduct some research on the accounting for gains and losses in a defined benefit plan.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- Briefly describe how pension gains and losses are accounted for.
- Explain the rationale behind the accounting method described in part (a).
- What is the related pension asset or liability that will show up on the balance sheet? When will each of these situations occur?

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting for pensions under GAAP and IFRS.

The accounting for various forms of compensation plans under IFRS is found in *IAS 19* (“Employee Benefits”) and *IFRS 2* (“Share-Based Payment”). *IAS 19* addresses the accounting for a wide range of compensation elements—wages, bonuses, postretirement benefits, and compensated absences. The underlying concepts for the accounting for postretirement benefits are similar between GAAP and IFRS—both GAAP and IFRS view pensions and other postretirement benefits as forms of deferred compensation. At present, there are significant differences in the specific accounting provisions as applied to these plans.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to pensions.

Similarities

- IFRS and GAAP separate pension plans into defined contribution plans and defined benefit plans. The accounting for defined contribution plans is similar.
- IFRS and GAAP recognize a pension asset or liability as the funded status of the plan (i.e., defined benefit obligation minus the fair value of plan assets). (Note that defined benefit obligation is referred to as the projected benefit obligation in GAAP.)
- IFRS and GAAP compute unrecognized past service cost (PSC) (referred to as prior service cost in GAAP) in the same manner. However, IFRS recognizes past service cost as a component of pension expense in income immediately. GAAP amortizes PSC over the remaining service lives of employees.

Differences

- IFRS and GAAP include interest expense on the liability in pension expense. Regarding asset returns, IFRS reduces pension expense by the amount of interest revenue (based on the discount rate times the beginning value of pension assets). GAAP includes an asset return component based on the expected return on plan assets.
- Under IFRS, companies recognize both liability and asset gains and losses (referred to as remeasurements) in other comprehensive income. These gains and losses are not “recycled” into income in subsequent periods. GAAP recognizes liability and asset gains and losses in “Accumulated other comprehensive income” and amortizes these amounts to income over remaining service lives, using the “corridor approach.”
- The accounting for pensions and other postretirement benefit plans is the same under IFRS. GAAP has separate standards for these types of benefits, and significant differences exist in the accounting.

ABOUT THE NUMBERS

Accounting for Pensions

Net Defined Benefit Obligation (Asset)

As in GAAP, under IFRS the **net defined benefit liability** (asset) is the deficit or surplus related to a defined benefit pension plan. The deficit or surplus is measured as follows.

Defined Benefit Obligation – Fair Value of Plan Assets (if any)
--

The deficit or surplus is often referred to as the **funded status** of the plan.

If the defined benefit obligation is greater than the plan assets, the pension plan has a deficit. Conversely, if the defined pension obligation is less than the plan assets, the pension plan has a surplus. Illustration IFRS20-1 shows these relationships.

Deficit		Surplus	
Defined benefit obligation	\$1,000,000	Defined benefit obligation	\$150,000
Plan assets	<u>900,000</u>	Plan assets	<u>200,000</u>
Net defined benefit obligation	<u>\$ 100,000</u>	Net defined benefit asset	<u>\$ 50,000</u>

ILLUSTRATION IFRS20-1

Presentation of Funded Status

The net defined benefit obligation (asset) is often referred to simply as the pension liability or the pension asset on the statement of financial position.

As indicated, companies should report either a pension asset or pension liability related to a pension plan on the statement of financial position (often referred to as the **net approach**). To illustrate, assume that at year-end Acer Company has a defined pension obligation of \$4,000,000 and plan assets of \$3,700,000. In this case, Acer reports \$300,000 (\$4,000,000 – \$3,700,000) as a pension liability on its statement of financial position.

Some believe that companies should report separately both the defined benefit obligation and the plan assets on the statement of financial position. This approach (often referred to as the **gross approach**) would report Acer’s defined benefit obligation of \$4,000,000 and its plan assets of \$3,700,000 on the statement of financial position. The IASB disagrees, indicating that

offsetting these amounts is consistent with its standard on when assets and liabilities should be netted.²⁹

Reporting Changes in the Defined Benefit Obligation (Asset)

The IASB requires that all changes in the defined benefit obligation and plan assets in the current period be recognized in comprehensive income. The Board believes that immediate recognition of the effects of these changes in the statement of comprehensive income provides the most understandable and useful information to financial statement users. The IASB requires that companies report changes arising from different elements of pension liabilities and assets in different sections of the statement of comprehensive income, depending on their nature.

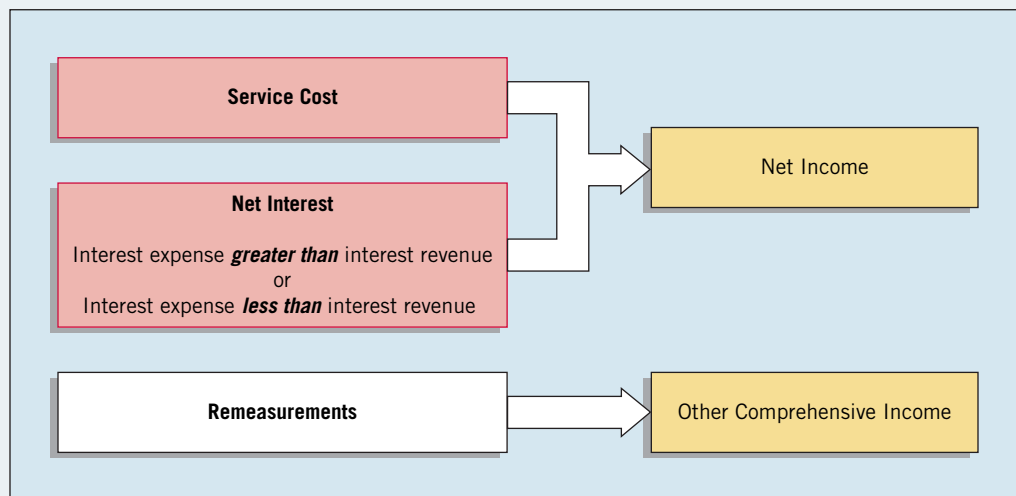

In the past, companies often reported only a single pension expense number in the comprehensive income statement. Providing additional segmentation of the **components of pension cost** provides additional transparency about the nature of these costs. The three components are as follows.

- **Service cost.** Service cost is either current service cost or past service cost. Current service cost is the increase in the present value of the defined benefit obligation from employee service in the current period. Past service cost is the change in the present value of the defined benefit obligation for employee service for prior periods—generally resulting from a plan amendment (e.g., changes to the plan). This component is reported in the statement of comprehensive income in the operating section of the statement and affects net income.
- **Net interest.** Net interest is computed by multiplying the discount rate by the funded status of the plan (defined benefit obligation minus plan assets). If the plan has a net defined benefit obligation, the company reports interest expense. Conversely, if it has a net defined benefit asset, it reports interest revenue. This approach is justified on the basis of its simplicity and that any financing costs should be based on the funded status of the plan. This amount is often shown below the operating section of the income statement in the financing section and affects net income.
- **Remeasurements.** Remeasurements are gains and losses related to the defined benefit obligation (changes in discount rate or other actuarial assumptions) and gains or losses on the fair value of the plan assets (actual rate of return less interest revenue included in the finance component). This component is reported in other comprehensive income, net of tax. **These remeasurement gains or losses therefore affect comprehensive income but not net income.**

Illustration IFRS20-2 shows the components of changes in the pension liability (asset) and their placement on the statement of comprehensive income.

ILLUSTRATION IFRS20-2

Reporting Changes in the
Pension Obligation (Assets)

As indicated in Illustration IFRS20-2, service cost and net interest are reported in net income. We discuss determination of each of these components in the following section. Remeasurements, which are reported in other comprehensive income, are discussed in a later section.

Service Cost. To determine current service cost and the related increase in the defined benefit obligation, companies must:

²⁹IAS 32 states that a financial asset and a financial liability should be offset and the net amount reported in the statement of financial position when a company (a) has a legally enforceable right to set off the recognized amounts and (b) intends either to settle on a net basis, or to realize the asset and settle it simultaneously.

1. Apply an actuarial valuation method.
2. Assign benefits to period of service.
3. Make actuarial assumptions.³⁰

In applying an actuarial valuation method, the IASB concluded that **companies must consider future compensation levels in measuring the present obligation and periodic pension expense if the plan benefit formula incorporates them.** In other words, the present obligation resulting from a promise to pay a benefit of 1 percent of an employee's **final pay** differs from the promise to pay 1 percent of **current pay**. To overlook this fact is to ignore an important aspect of pension expense. Thus, the Board adopts the *projected unit credit method (often referred to as the benefits/years-of-service method)*, which determines pension expense based on future salary levels.

Some object to this determination, arguing that a company should have more freedom to select an expense recognition pattern. Others believe that incorporating future salary increases into current pension expense is accounting for events that have not yet happened. They argue that if a company terminates the plan today, it pays only liabilities for accumulated benefits. **Nevertheless, the IASB indicates that the defined benefit obligation provides a more realistic measure of the employer's obligation under the plan on a going concern basis and, therefore, companies should use it as the basis for determining service cost.**

The assignment of benefits to periods of service is based on the actuarial valuation method. The actuary then allocates the cost of the pension benefits over the expected service life of the company's employees. In determining the proper service cost for a period, the actuary makes actuarial assumptions related to such factors as mortality; rates of employee turnover, disability, and early retirement; discount rate; benefit levels; and future salary levels. While *IAS 19* does not require use of an actuary, given the complexity of these estimates, just about all companies rely on an actuary to determine service cost and related other defined benefit measures.

Net Interest. In computing net interest, companies assume that the discount rate, the net defined benefit obligation, and the pension asset are determined at the beginning of the year.³¹ The **discount rate** is based on the yields of high-quality bonds with terms consistent with the company's pension obligation. Net interest is then computed as indicated in the following equation.

$$\text{Net Interest} = (\text{Defined Benefit Obligation} \times \text{Discount Rate}) - (\text{Plan Assets} \times \text{Discount Rate})$$

That is, net interest is determined by multiplying the net defined pension obligation (asset) by the discount rate.

Because payment of the pension obligation is deferred, companies record the pension liability on a discounted basis. As a result, the liability accrues interest over the service life of the employee (passage of time), which is essentially interest expense (**interest on the liability**). Similarly, companies earn a return on their plan assets. That is, a company assumes that it earns interest based on multiplying the discount rate by the plan assets. While the IASB recognizes that the actual return on plan assets may differ from the assumed interest revenue computed, it believes that the change in plan assets can be divided into an amount that arises from the passage of time and amounts that arise from other changes. As we discuss in the next section, changes not related to the passage of time are reported in other comprehensive income as remeasurements. Thus, the growth in the plan assets should mirror the growth in the defined benefit obligation. In other words, the assumed interest revenue on the plan assets based on the passage of time offsets the interest expense on the defined benefit obligation.

In summary, pension expense is comprised of two components: (1) service cost and (2) net interest. Companies report each of these components in the statement of comprehensive income. In some cases, companies may choose to report these components in one section of the statement of comprehensive income and report total pension expense. Other companies may choose to report the service cost component in operating income and the net interest in a separate section related to financing.³²

³⁰As indicated earlier, service cost is comprised of current and past service cost. Determination of past service cost is based on the same actuarial valuation model as that used for current service cost. We discuss recognition of past service cost in a later section.

³¹The IASB indicates that if the beginning of the year amount changes materially (due to contributions to or payments out of the plan), an adjustment to the beginning balances should be made. *For homework purposes, unless information indicates that balances have changed materially, use the beginning of the year balances.*

³²The IASB does not provide guidance on which of these two approaches is preferred. *For homework purposes, report pension expense as a single total in income from operations in the statement of comprehensive income.*

Plan Assets and Actual Return

Pension **plan assets** are usually investments in shares, bonds, other securities, and real estate that a company holds to earn a reasonable rate of return. Plan assets are reported at fair value. Companies generally hold these assets in a separate legal entity (a pension fund) that exists only to administer the employee benefit plan. These assets held by the pension fund are therefore not available to the company's own creditors (even in bankruptcy). Employer contributions and the actual return on plan assets increase pension plan assets. **Actual return on plan assets** is the increase in the pension fund assets arising from interest, dividends, and realized and unrealized changes in the fair value of the plan. Benefits paid to retired employees decrease plan assets.

To illustrate, assume that Hasbro Company has pension plan assets of \$4,200,000 on January 1, 2017. During 2017, Hasbro contributed \$300,000 to the plan and paid out retirement benefits of \$250,000. Its actual return on plan assets was \$210,000 for the year. Hasbro's plan assets at December 31, 2017, are \$4,460,000, computed as shown in Illustration IFRS20-3.

ILLUSTRATION IFRS20-3

Determination of Pension Assets

Plan assets, January 1, 2017	\$4,200,000
Contributions by Hasbro to plan	300,000
Actual return	210,000
Benefits paid to employees	(250,000)
Plan assets, December 31, 2017	<u>\$4,460,000</u>

In some cases, companies compute the actual return by adjusting the change in plan assets for the effect of contributions during the year and benefits paid during the year. The equation in Illustration IFRS20-4, or a variation thereof, can be used to compute the actual return.

ILLUSTRATION IFRS20-4

Equation for Computing Actual Return

$$\text{Actual Return} = \left(\begin{array}{c} \text{Plan} \\ \text{Assets} \\ \text{Ending} \\ \text{Balance} \end{array} - \begin{array}{c} \text{Plan} \\ \text{Assets} \\ \text{Beginning} \\ \text{Balance} \end{array} \right) - (\text{Contributions} - \text{Benefits Paid})$$

Stated another way, the actual return on plan assets is the difference between the fair value of the plan assets at the beginning of the period and at the end of the period, adjusted for contributions and benefit payments. Illustration IFRS20-5 uses the equation above to compute actual return, using the information provided in Illustration IFRS20-3.

ILLUSTRATION IFRS20-5

Computation of Actual Return on Plan Assets

Plan assets, December 31, 2017		\$4,460,000
Plan assets, January 1, 2017		<u>(4,200,000)</u>
Increase in fair value of plan assets		260,000
Deduct: Contributions to plan	\$300,000	
Add: Benefit payments to employees	<u>250,000</u>	<u>(50,000)</u>
Actual return		<u>\$ 210,000</u>

In this case, Hasbro has a positive actual return on plan assets. Recently, some pension plans have experienced negative actual returns due to the increased volatility in global securities markets.

Using a Pension Worksheet

We will now illustrate the basic computation of pension expense using the first two components: (1) service cost and (2) net interest. We discuss rerevaluations in later sections.

Companies often use a worksheet to record pension-related information. As its name suggests, the worksheet is a working tool. A worksheet is **not** a permanent accounting record: It is neither a journal nor part of the general ledger. The worksheet is merely a device to make it easier to prepare entries and the financial statements.³³ Illustration IFRS20-6 shows the format of the **pension worksheet**.

The "General Journal Entries" columns of the worksheet (near the middle) determine the entries to record in the formal general ledger accounts. The "Memo Record" columns (on the right

³³The use of a pension entry worksheet is recommended and illustrated by Paul B. W. Miller, "The New Pension Accounting (Part 2)," *Journal of Accountancy* (February 1987), pp. 86–94.

10						

side) maintain balances in the defined benefit obligation and the plan assets. The difference between the defined benefit obligation and the fair value of the plan assets is the **pension asset/liability**, which is shown in the statement of financial position. If the defined benefit obligation is greater than the plan assets, a pension liability occurs. If the defined benefit obligation is less than the plan assets, a pension asset occurs.

On the first line of the worksheet, a company enters the beginning balances (if any). It then records subsequent transactions and events related to the pension plan using debits and credits, using both sets of columns as if they were one. For each transaction or event, the debits must equal the credits. **The ending balance in the Pension Asset/Liability column should equal the net balance in the memo record.**

2017 Entries and Worksheet

To illustrate the use of a worksheet and how it helps in accounting for a pension plan, assume that on January 1, 2017, Zarle Company provides the following information related to its pension plan for the year 2017.

- Plan assets, January 1, 2017, are \$100,000.
- Defined benefit obligation, January 1, 2017, is \$100,000.
- Annual service cost is \$9,000.
- Discount rate is 10 percent.
- Funding contributions are \$8,000.
- Benefits paid to retirees during the year are \$7,000.

Using the data presented above, the worksheet in Illustration IFRS20-7 (page 1186) presents the beginning balances and all of the pension entries recorded by Zarle in 2017. Zarle records the beginning balances for the defined benefit obligation and the pension plan assets on the first line of the worksheet in the memo record. Because the defined benefit obligation and the plan assets are the same at January 1, 2017, the Pension Asset/Liability account has a zero balance at January 1, 2017.

Entry (a) in Illustration IFRS20-7 records the service cost component, which increases pension expense by \$9,000 and increases the liability (defined benefit obligation) by \$9,000. Entry (b) accrues the interest expense component, which increases both the liability and the pension expense by \$10,000 (the beginning defined benefit obligation multiplied by the discount rate of 10 percent). Entry (c) records the interest revenue component, which increases plan assets and decreases pension expense by \$10,000. This is computed by multiplying the beginning plan assets by the discount rate of 10 percent. As a result, net interest expense (income) is zero in 2017. Entry (d) records Zarle's contribution (funding) of assets to the pension fund, thereby decreasing cash by \$8,000 and increasing plan assets by \$8,000. Entry (e) records the benefit payments made to retirees, which results in equal \$7,000 decreases to the plan assets and the defined benefit obligation.

Zarle makes the "formal journal entry" on December 31, which records the pension expense in 2017, as follows.

2017		
Pension Expense	9,000	
Cash		8,000
Pension Asset/Liability		1,000

6	Balance, Jan. 1, 2017			—	100,000 Cr.	100,000 Dr.
7	(a) Service cost	9,000 Dr.			9,000 Cr.	
8	(b) Interest expense	10,000 Dr.			10,000 Cr.	
9	(c) Interest revenue	10,000 Cr.				10,000 Dr.
10	(d) Contributions		8,000 Cr.			8,000 Dr.
11	(e) Benefits				7,000 Dr.	7,000 Cr.
12						
13	Journal entry for 2017	9,000 Dr.	8,000 Cr.	1,000 Cr.*		
14	Balance, Dec. 31, 2017			1,000 Cr.**	112,000 Cr.	111,000 Dr.
15						
16	*\$9,000 – \$8,000 = \$1,000					
17	**\$112,000 – \$111,000 = \$1,000					

The credit to Pension Asset/Liability for \$1,000 represents the difference between the 2017 pension expense of \$9,000 and the amount funded of \$8,000. Pension Asset/Liability (credit) is a liability because Zarle underfunds the plan by \$1,000. The Pension Asset/Liability account balance of \$1,000 also equals the net of the balances in the memo accounts. Illustration IFRS20-8 shows that the defined benefit obligation exceeds the plan assets by \$1,000, which reconciles to the pension liability reported in the statement of financial position.

**ILLUSTRATION
IFRS20-8**Pension Reconciliation
Schedule—December 31,
2017

Defined benefit obligation (Credit)	\$(112,000)
Plan assets at fair value (Debit)	111,000
Pension asset/liability (Credit)	\$ (1,000)

If the net of the memo record balances is a credit, the reconciling amount in the Pension Asset/Liability column will be a credit equal in amount. If the net of the memo record balances is a debit, the Pension Asset/Liability amount will be a debit equal in amount. The worksheet is designed to produce this reconciling feature, which is useful later in the preparation of the financial statements and required note disclosure related to pensions.

In this illustration (for 2017), the debit to Pension Expense exceeds the credit to Cash, resulting in a credit to Pension Asset/Liability—the recognition of a liability. If the credit to Cash exceeded the debit to Pension Expense, Zarle would debit Pension Asset/Liability—the recognition of an asset.³⁴

Past Service Cost

Past service cost is the change in the present value of the defined benefit obligation resulting from a plan amendment or a curtailment.³⁵ For example, a plan amendment arises when a company decides to provide additional benefits to existing employees for past service. Conversely, the company may decide that it is necessary to reduce its benefit package retroactively for existing employees, thereby reducing their pension benefit. A **curtailment** occurs when the company has

³⁴The IASB in *IAS 19* limits the amount of a pension asset that is recognized, based on a recoverability test. This test, which has been further clarified in *IFRIC 14*, limits the amount of the pension asset to the sum of unrecognized actuarial gains and losses (discussed later) and amounts that will be received by the company in the form of refunds or reduction of future contributions. *For purposes of homework, assume that a pension asset, if present, meets the criteria for full recognition.*

³⁵The IASB also indicates that gains and losses on non-routine settlements are considered past service costs. A **settlement** is a payment of benefits that is not set out in the terms of the plan.

a significant reduction in the number of employees covered by the plan. Because a curtailment has the same effect as a reduction in benefits due to an amendment to the plan, these situations are accounted for in the same way. Illustration IFRS20-9 summarizes the nature of past service costs.

PAST SERVICE COSTS (EXPENSE IN CURRENT PERIOD)	
<u>Plan Amendments</u> <ul style="list-style-type: none"> • Introduction of a plan. • Withdrawal of a plan. • Changes to a plan. 	<u>Curtailments</u> <ul style="list-style-type: none"> • Significant reduction in the number of employees covered by the plan.

ILLUSTRATION IFRS20-9

Types of Past Service Costs

The accounting for past service cost is straightforward—expense past service cost in the period of the amendment or curtailment. As a result, a substantial increase (decrease) in pension expense and the defined benefit obligation often results when a plan amendment or curtailment occurs. Because current and past service costs relate directly to employment, they are reported in the operating section of the statement of comprehensive income.

Some disagree with the IASB position of expensing these costs in the year a plan is amended or curtailed. They argue that a company would not provide these additional benefits for past years of service unless it expects to receive benefits in the future. According to this reasoning, a company should not recognize the full past service cost in the year of the amendment. Instead, the past service cost should be spread out over the remaining service life of employees who are expected to benefit from the changes in the plan. Others believe that if they are truly past service costs, they should be treated retroactively as an adjustment made to prior periods.

However, the IASB decided that any changes in the defined benefit obligation or plan assets should be recognized in the current period. To do otherwise is not informative and leads to delayed recognition of costs or reduced benefits which are neither assets nor liabilities.

It is also possible to decrease past service costs by decreasing the defined benefit obligation (referred to as negative past service cost). Negative past service cost arises when an entity changes the benefits attributable to past service cost so that the present value of the defined benefit obligation decreases. In that case, pension expense is decreased. Both positive (increased pension expense) and negative (decreased pension expense) past service cost adjustments are handled in the same manner; that is, adjust pension expense immediately.

2018 Entries and Worksheet

Continuing the Zarle Company illustration into 2018, we note that the company amends the pension plan on January 1, 2018, to grant employees past service benefits with a present value of \$81,600. The following additional facts apply to the pension plan for the year 2018.

- Annual service cost is \$9,500.
- Discount rate is 10 percent.
- Annual funding contributions are \$20,000.
- Benefits paid to retirees during the year are \$8,000.

Illustration IFRS20-10 (on page 1188) presents a worksheet of all the pension entries and information recorded by Zarle in 2018.

The first line of the worksheet shows the beginning balances of the Pension Asset/Liability account and the memo accounts. Entry (f) records Zarle's granting of past service cost, by adding \$81,600 to the defined benefit obligation and to Pension Expense. Entry (g) records the current service cost; entry (h) records interest expense for the period. Because the past service cost occurred at the beginning of the year, interest is computed on the January 1, 2018, balance of the defined benefit obligation, adjusted for the past service cost. Interest expense is therefore \$19,360 ($\$193,600 \times 10\%$). Entry (i) records interest revenue for the period of \$11,100 ($\$111,000 \times 10\%$). Entries (j) and (k) are similar to the corresponding entries in 2017.

Zarle makes the following journal entry on December 31 to formally record the 2018 pension expense—the sum of the annual pension expense column.

2018	
Pension Expense	99,360
Cash	20,000
Pension Asset/Liability	79,360

ILLUSTRATION IFRS20-10

14						
15						
16						

Because the expense exceeds the funding, Zarle credits the Pension Asset/Liability account for the \$79,360 difference. That account is a liability. In 2018, as in 2017, the balance of the Pension Asset/Liability account (\$80,360) is equal to the net of the balances in the memo accounts, as shown in Illustration IFRS20-11.

ILLUSTRATION IFRS20-11

Pension Reconciliation Schedule—December 31, 2018

Defined benefit obligation (Credit)	\$ (214,460)
Plan assets at fair value (Debit)	134,100
Pension asset/liability (Credit)	\$ (80,360)

The **reconciliation** is the formula that makes the worksheet work. It relates the components of pension accounting, recorded and unrecorded, to one another.

Remeasurements

Of great concern to companies that have pension plans are the uncontrollable and unexpected swings that can result from (1) sudden and large changes in the fair value of plan assets and (2) changes in actuarial assumptions that affect the amount of the defined benefit obligation. How should these changes (referred to as **remeasurements**) affect the financial statements, most notably pension expense? The IASB believes that the most informative way is to recognize the remeasurement in other comprehensive income. The rationale for this reporting is that the predictive nature of remeasurements is much different than the other two components of pension benefit cost—service cost and net interest.

Remeasurements are generally of two types:

1. Gains and losses on plan assets.
2. Gains and losses on the defined benefit obligation.

Asset Gains and Losses. The gains and losses on plan assets (referred to as **asset gains and losses**) is the difference between the actual return and the interest revenue computed in determining net interest. Asset gains occur when actual returns exceed the interest revenue. Asset losses occur when the actual returns are less than interest revenue. To illustrate, assume that Shopbob Company has plan assets at January 1, 2017, of \$100,000. The discount rate for the year is 6 percent, and the actual return on the plan assets for 2017 is \$8,000. In 2017, Shopbob should record an asset gain of \$2,000, computed as follows.

Actual return	\$8,000
Less: Interest revenue (\$100,000 × 6%)	<u>6,000</u>
Asset gain	<u>\$2,000</u>

**ILLUSTRATION
IFRS20-12**

Computation of Asset Gain

Shopbob therefore debits plan assets for the asset gain of \$2,000 and credits Other Comprehensive Income (G/L) for the same amount. If interest revenue exceeds the actual return, Shopbob debits Other Comprehensive Income (G/L) for the asset loss and credits plan assets.

Liability Gains and Losses. In estimating the defined benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the defined benefit obligation. Seldom does actual experience coincide exactly with actuarial predictions. These gains or losses from changes in the defined benefit obligation are called **liability gains and losses**.

Companies report liability gains (resulting from unexpected decreases in the liability balance) and liability losses (resulting from unexpected increases in the liability balance) in Other Comprehensive Income (G/L). Companies combine the liability gains and losses in the same Other Comprehensive Income (G/L) account used for asset gains and losses. They accumulate the asset and liability gains and losses from year to year in Accumulated Other Comprehensive Income.³⁶ This amount is reported on the statement of financial position in the equity section.

2019 Entries and Worksheet

Continuing the Zarle Company illustration, the following facts apply to the pension plan for 2019.

- Annual service cost is \$13,000.
- Discount rate is 10 percent.
- Actual return on plan assets is \$12,000.
- Annual funding contributions are \$24,000.
- Benefits paid to retirees during the year are \$10,500.
- Changes in actuarial assumptions establish the end-of-year defined benefit obligation at \$265,000.

The worksheet in Illustration IFRS20-13 (on page 1190) presents all of Zarle's 2019 pension entries and related information. The first line of the worksheet records the beginning balances that relate to the pension plan. In this case, Zarle's beginning balances are the ending balances from its 2018 pension worksheet in Illustration IFRS20-10.

Entries (l), (m), (n), (o), and (p) are similar to the corresponding entries in 2017 or 2018. Entries (m) and (n) are related. Entry (m) records the interest expense of \$21,446 ($\$214,460 \times 10\%$). Entry (n) records interest revenue of \$13,410 ($\$134,100 \times 10\%$). Therefore, net interest expense is \$8,036 ($\$21,446 - \$13,410$). Entries (o) and (p) are recorded similarly in 2019 as those in 2017 and 2018.

Entries (q) and (r) need additional explanation. As indicated, the actual return on plan assets for 2019 was \$12,000. However, as indicated in entry (n), pension expense was decreased \$13,410 as a result of multiplying the beginning plan assets by the discount rate to arrive at an assumed interest revenue of \$13,410. As a result, Zarle has an asset loss of \$1,410 ($\$13,410 - \$12,000$) because the assumed interest revenue is greater than the actual return. This asset loss is debited to Other Comprehensive Income (G/L) and credited to plan assets. Pension plan assets are then properly stated at their fair value.

Entry (r) records the change in the defined benefit obligation resulting from the changes in the actuarial assumptions related to this obligation. As indicated in the facts above, the actuary has determined that the ending balance in the defined benefit obligation should be \$265,000 at December 31, 2019. However, the balance at December 31, 2019, before any adjustment for

³⁶The IASB is silent as to whether the account "Accumulated Other Comprehensive Income" should be used instead of another equity account, like Retained Earnings. For homework purposes, use an Accumulated Other Comprehensive Income account. The IASB also permits the transfer of the balance in the Accumulated Other Comprehensive Income account to other equity accounts at a later date.

Pension Worksheet—2019

actuarial gains and losses related to the defined benefit obligation is \$238,406, as shown in Illustration IFRS20-14.

ILLUSTRATION IFRS20-14

Defined Benefit
Obligation Balance
(Unadjusted)

December 31, 2018, DBO balance	\$214,460
Service cost [entry (l)]	13,000
Interest expense [entry (m)]	21,446
Benefits paid [entry (p)]	<u>(10,500)</u>
December 31, 2019, DBO balance (before liability increases)	<u>\$238,406</u>

The difference between the ending balance of \$265,000 as determined by the actuary and the present balance of \$238,406 is \$26,594 (a liability loss on the defined benefit liability). This liability loss is debited to Other Comprehensive Income (G/L) and credited to the defined benefit obligation. After this worksheet adjustment, the defined benefit obligation is stated at its actuarial value of \$265,000. The journal entry to record the information related to the pension plan at December 31, 2019, based on the pension worksheet in Illustration IFRS20-13, is as follows.

Pension Expense	21,036
Other Comprehensive Income (G/L)	28,004
Cash	24,000
Pension Asset/Liability	25,040

As the 2019 worksheet indicates, the \$105,400 balance in the Pension Asset/Liability account at December 31, 2019, is equal to the net of the balances in the memo accounts. Illustration IFRS20-15 shows this computation.

ILLUSTRATION IFRS20-15

Pension Reconciliation
Schedule—December 31,
2019

Defined benefit obligation (Credit)	\$(265,000)
Plan assets at fair value (Debit)	<u>159,600</u>
Pension asset/liability	<u>\$(105,400)</u>

Zarle carries the 2019 ending balances for Pension Asset/Liability and Accumulated Other Comprehensive Income forward as the beginning balances for pension plan accounting in 2020. These balances will be adjusted by changes in the defined benefit obligation and plan assets as shown in the prior examples. For example, assume that Zarle's pension plan had the following activity in 2020:

Service cost	\$10,072	Contributions	\$32,000
Pension expense	17,450	Benefits	11,000
Asset gain	13,150	Decrease in Pension Asset/Liability	27,700
Discount rate	7%		

The ending balances for the defined benefit obligation and plan assets are \$282,622 and \$204,922, respectively. These elements are summarized in the partial 2020 pension worksheet shown in Illustration IFRS20-16.

Partial Pension Worksheet—2020.xls							
Home Insert Page Layout Formulas Data Review View							
P18 fx							
	A	B	C	D	E	F	G
1	General Journal Entries					Memo Record	
2							
3		Annual Pension Expense	Cash	OCI— Gain/Loss	Pension Asset/ Liability	Defined Benefit Obligation	Plan Assets
4	Items						
5							
6	Balance, Jan. 1, 2020			28,004 Dr.	105,400 Cr.	265,000 Cr.	159,600 Dr.
7							
8							
9	Journal entry for 2020	17,450 Dr.	32,000 Cr.	13,150 Cr.	27,700 Dr.		
10							
11	Accumulated OCI, Jan. 1, 2020			28,004 Dr.			
12	Balance, Dec. 31, 2020			14,854 Dr.	77,700 Cr.	282,622 Cr.	204,922 Dr.
13							

Focusing on the “Journal Entry” row, in 2020 Zarle records pension expense of \$17,450 and a decrease in Pension Asset/Liability of \$27,700. The reduction in Pension Asset/Liability is due in part to the asset gain of \$13,150 recorded in 2020. As a result, Zarle’s 2020 ending balances (which become the 2021 beginning balances) are \$77,700 for Pension Asset/Liability and Accumulated Other Comprehensive Income \$14,854 (beginning Accumulated OCI of \$28,004 – gain of \$13,150).

Partial Pension
Worksheet—2020

ON THE HORIZON

The IASB and the FASB have been working collaboratively on a postretirement benefit project. The recent amendments issued by the IASB moves IFRS closer to GAAP with respect to recognition of the funded status on the statement of financial position. However, as illustrated in the *About the Numbers* section above, significant differences remain in the components of pension expense. The FASB is expected to begin work on a project that will reexamine expense measurement of postretirement benefit plans. The FASB likely will consider the recent IASB amendments in this area, which could lead to a converged standard.

IFRS SELF-TEST QUESTIONS

1. At the end of the current period, Oxford Ltd. has a defined benefit obligation of \$195,000 and pension plan assets with a fair value of \$110,000. The amount of the vested benefits for the plan is \$105,000. What amount related to its pension plan will be reported on the company’s statement of financial position?

- (a) \$5,000. (c) \$85,000.
(b) \$90,000. (d) \$20,000.

2. At the end of the current year, Kennedy Co. has a defined benefit obligation of \$335,000 and pension plan assets with a fair value of \$245,000. The amount of the vested benefits for the plan is \$225,000. Kennedy has an actuarial gain of \$8,300. What account and amount(s) related to its pension plan will be reported on the company’s statement of financial position?

- (a) Pension Liability and \$74,300.
(b) Pension Liability and \$90,000.
(c) Pension Asset and \$233,300.
(d) Pension Asset and \$110,000.

3. For 2017, Carson Majors Inc. had pension expense of \$77 million and contributed \$55 million to the pension fund. Which of the following is the journal entry that Carson Majors would make to record pension expense and funding?

- (a) Pension Expense 77,000,000
Pension Asset/Liability 22,000,000
Cash 55,000,000
- (b) Pension Expense 77,000,000
Pension Asset/Liability 22,000,000
Cash 99,000,000

1192 Chapter 20 Accounting for Pensions and Postretirement Benefits

(c) Pension Expense	55,000,000	
Pension Asset/Liability	22,000,000	
Cash		77,000,000
(d) Pension Expense	22,000,000	
Pension Asset/Liability	55,000,000	
Cash		77,000,000

4. At January 1, 2017, Wembley Company had plan assets of \$250,000 and a defined benefit obligation of the same amount. During 2017, service cost was \$27,500, the discount rate was 10%, actual return on plan assets was \$25,000, contributions were \$20,000, and benefits paid were \$17,500. Based on this information, what would be the defined benefit obligation for Wembley Company at December 31, 2017?

- (a) \$277,500. (c) \$27,500.
 (b) \$285,000. (d) \$302,500.

5. Towson Company has experienced tough competition for its talented workforce, leading it to enhance the pension benefits provided to employees. As a result, Towson amended its pension plan on January 1, 2017, and granted past service costs of \$250,000. Current service cost for 2017 is \$52,000. Interest expense is \$18,000, and interest revenue is \$5,000. Actual return on assets in 2017 is \$3,000. What is Towson's pension expense for 2017?

- (a) \$65,000. (c) \$317,000.
 (b) \$302,000. (d) \$315,000.

IFRS CONCEPTS AND APPLICATION

IFRS20-1 What is net interest? Identify the elements of net interest and explain how they are computed.

IFRS20-2 What is service cost, and what is the basis of its measurement?

IFRS20-3 What is meant by "past service cost"? When is past service cost recognized as pension expense?

IFRS20-4 Bill Haley is learning about pension accounting. He is convinced that in years when companies record liability gains and losses, total comprehensive income will not be affected. Is Bill correct? Explain.

IFRS20-5 At the end of the current year, Joshua Co. has a defined benefit obligation of \$335,000 and pension plan assets with a fair value of \$345,000. The amount of the vested benefits for the plan is \$225,000. Joshua has a liability gain of \$8,300 (beginning accumulated OCI is zero). What amount and account(s) related to its pension plan will be reported on the company's statement of financial position?

IFRS20-6 Villa Company has experienced tough competition, leading it to seek concessions from its employees in the company's pension plan. In exchange for promises to avoid layoffs and wage cuts, the employees agreed to receive lower pension benefits in the future. As a result, Villa amended its pension plan on January 1, 2017, and recorded negative past service cost of \$125,000. Current service cost for 2017 is \$26,000. Interest expense is \$9,000, and interest revenue is \$2,500. Actual return on assets in 2017 is \$1,500. Compute Villa's pension expense in 2017.

IFRS20-7 Tevez Company experienced an actuarial loss of \$750 in its defined benefit plan in 2017. For 2017, Tevez's revenues are \$125,000, and expenses (excluding pension expense of \$14,000, which does not include the actuarial loss) are \$85,000. Prepare Tevez's statement of comprehensive income for 2017.

IFRS20-8 The following defined pension data of Doreen Corp. apply to the year 2017.

Defined benefit obligation, 1/1/17 (before amendment)	\$560,000
Plan assets, 1/1/17	546,200
Pension asset/liability	13,800 Cr.
On January 1, 2017, Doreen Corp., through plan amendment, grants past service benefits having a present value of	120,000
Discount rate	9%
Service cost	58,000
Contributions (funding)	65,000
Actual return on plan assets	49,158
Benefits paid to retirees	40,000

Instructions

For 2017, prepare a pension worksheet for Doreen Corp. that shows the journal entry for pension expense and the year-end balances in the related pension accounts.

IFRS20-9 Buhl Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2017, the following balances relate to this plan.

Plan assets	\$480,000
Defined benefit obligation	600,000
Pension asset/liability	120,000

As a result of the operation of the plan during 2017, the following additional data are provided by the actuary.

Service cost for 2017	\$90,000
Discount rate, 6%	
Actual return on plan assets in 2017	55,000
Unexpected loss from change in defined benefit obligation, due to change in actuarial predictions	76,000
Contributions in 2017	99,000
Benefits paid retirees in 2017	85,000

Instructions

- Using the data above, compute pension expense for Buhl Corp. for the year 2017 by preparing a pension worksheet.
- Prepare the journal entry for pension expense for 2017.

IFRS20-10 Linda Berstler Company sponsors a defined benefit pension plan. The corporation's actuary provides the following information about the plan.

	January 1, 2017	December 31, 2017
Defined benefit obligation	\$2,500	\$3,300
Plan assets (fair value)	1,700	2,620
Discount rate		10%
Pension asset/liability	800	?
Service cost for the year 2017		400
Contributions (funding in 2017)		700
Benefits paid in 2017		200

Instructions

- Compute the actual return on the plan assets in 2017.
- Compute the amount of other comprehensive income (G/L) as of December 31, 2017. (Assume the January 1, 2017, balance was zero.)

Professional Research

IFRS20-11 Jack Kelly Company has grown rapidly since its founding in 2007. To instill loyalty in its employees, Kelly is contemplating establishment of a defined benefit plan. Kelly knows that lenders and potential investors will pay close attention to the impact of the pension plan on the company's financial statements, particularly any gains or losses that develop in the plan. Kelly has asked you to conduct some research on the accounting for gains and losses in a defined benefit plan.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- Briefly describe how pension gains and losses are accounted for.
- Explain the rationale behind the accounting method described in part (a).
- What is the related pension asset or liability that may show up on the statement of financial position? When will each of these situations occur?

International Financial Reporting Problem**Marks and Spencer plc (M&S)**

IFRS20-12 The financial statements of **M&S** are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What kind of pension plan does M&S provide its employees?
- What was M&S's pension expense for 2015 and 2014?
- What is the impact of M&S's pension plans for 2015 on its financial statements?
- What information does M&S provide on the target allocation of its pension assets? How do the allocations relate to the expected returns on these assets?

ANSWERS TO IFRS SELF-TEST QUESTIONS

Accounting for Leases

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1** Explain the nature, economic substance, and advantages of lease transactions.
- 2** Describe the accounting for leases by lessees.
- 3** Describe the accounting for leases by lessors.
- 4** Describe the accounting and reporting for special features of lease arrangements.

GAAP IN MOTION

This chapter covers the current GAAP requirements related to leasing as of February 1, 2016. A new standard on leasing is likely by early spring of 2016 and, if issued, a revised chapter related to leasing covering the new standard will be available online in summer 2016. Note that companies will not be required to adopt the new standard on leasing until fiscal years beginning in 2019.

MORE COMPANIES ASK, “WHY BUY?”

Leasing has grown tremendously in popularity. Today, it is the fastest growing form of capital investment. Instead of borrowing money to buy an airplane, computer, nuclear core, or satellite, a company makes periodic payments to lease these assets. Even gambling casinos lease their slot machines. Of the 500 companies surveyed by the AICPA, more than half disclosed lease data.*

A classic example is the airline industry. Many travelers on airlines such as **United**, **Delta**, and **Southwest** believe these airlines own the planes on which they are flying. Often, this is not the case. Airlines lease many of their airplanes due to the favorable accounting treatment they receive if they lease rather than purchase. Presented below are the lease percentages for the major U.S. airlines.

What about other companies? They are also exploiting the existing lease accounting rules to keep assets and liabilities off the books. For example, **Krispy Kreme**, a chain of over 1,000 doughnut shops around the world,

**Accounting Trends and Techniques* indicates that 277 out of 500 surveyed companies reported leased assets. Companies that lease tend to be smaller, are high growth, and are in technology-oriented industries (see www.techlease.com).

had been showing good growth and profitability using a relatively small bit of capital. That's an impressive feat if you care about return on capital. But there's a hole in this doughnut. The company explained that it was building a \$30 million new mixing plant and warehouse in Effingham, Illinois. Yet the financial statements failed to disclose the investments and obligations associated with that \$30 million. By financing through a synthetic lease, Krispy Kreme kept the investment and obligation off the books.

In a synthetic lease, a financial institution like **Bank of America** sets up a special-purpose entity (SPE) that borrows money to build the plant and then leases it to Krispy Kreme. For accounting purposes, Krispy Kreme reports only rent expense. For tax purposes, however, Krispy Kreme can be considered the owner of the asset and gets depreciation tax deductions. This is a pretty good deal for Krispy Kreme. But for investors? Not so good. This is because the Krispy Kreme financial statements failed to disclose the investments and obligations associated with that \$30 million.

Another example is struggling drug store chain **Rite Aid**. Its balance sheet was in shambles. As indicated in a recent annual report, while its current assets exceeded current liabilities, that was the end of any good news in the balance sheet. Total assets were \$7,364 million, while total liabilities were \$9,951 million, thereby yielding a shareholders' deficit of \$(2,587) million. Things were even worse once you consider Rite Aid's large off-balance-sheet lease obligations. Using the data in note 10 of the financial statements, analysts estimated the company's lease liabilities to be \$5,939 million. This adjustment increased total liabilities to \$15,890 million, causing the stockholders' deficit to worsen to \$(8,526) million.

As you will learn in this chapter, due to lease accounting rules, users of financial statements must make an educated guess on the real-but-hidden leverage of leasing only by using the information disclosed in the notes and by applying a rule-of-thumb multiple. As the chairperson for the IASB noted, "It seems odd to expect an analyst to guess the liabilities associated with leases when management already has this information at its fingertips." This concern explains why the FASB and IASB have worked on a new standard on leasing, so that assets and liabilities avoid on-balance-sheet treatment simply by calling a loan a "lease."

Ketz, "Still Searching for the 'Rite' Stuff," *Grumpy Old Accountants* (April 30, 2012), <http://blogs.smeal.psu.edu/grumpyoldaccountants/archives/643>; and Hans Hoogervorst, "Harmonisation and Global Economic Consequences," Public lecture at the London School of Economics (November 6, 2012).

PREVIEW OF CHAPTER 21 Our opening story indicates the increased significance and prevalence of lease arrangements. As a result, the need for uniform accounting and informative reporting of these transactions has intensified. In this chapter, we look at the accounting issues related to leasing. The content and organization of this chapter are as follows.

This chapter also includes numerous **conceptual and international discussions** that are integral to the topics presented here.

ACCOUNTING FOR LEASES

THE LEASING ENVIRONMENT

- Who are the players?
- Advantages of leasing
- Conceptual nature of a lease

ACCOUNTING BY THE LESSEE

- Capitalization criteria
- Accounting differences
- Capital lease method
- Operating method
- Comparison of capital and operating leases

ACCOUNTING BY THE LESSOR

- Economics of leasing
- Classification
- Direct-financing method
- Operating method

SPECIAL LEASE ACCOUNTING PROBLEMS

- Residual values
- Sales-type leases
- Bargain-purchase option
- Initial direct costs
- Current versus noncurrent
- Disclosure
- Unresolved problems

REVIEW AND PRACTICE

Go to the REVIEW AND PRACTICE section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

LEARNING OBJECTIVE 1

Explain the nature, economic substance, and advantages of lease transactions.

THE LEASING ENVIRONMENT

Aristotle once said, “Wealth does not lie in ownership but in the use of things”! Clearly, many U.S. companies have decided that Aristotle is right, as they have become heavily involved in leasing assets rather than owning them. For example, according to the Equipment Leasing Association (ELA), the global equipment-leasing market is a \$900 billion business, with the United States accounting for about one-third of the global market. The ELA estimates that of the \$1.5 trillion in total fixed investment expected from domestic businesses in 2014, \$946 billion (63 percent) will be financed through leasing. Remember that these statistics are just for equipment leasing. Add in real estate leasing, which is probably larger, and we are talking about a very large and growing business, one that is at least in part driven by the accounting.

What types of assets are being leased? As the opening story indicated, any type of equipment can be leased, such as railcars, helicopters, bulldozers, barges, CT scanners, computers, and so on.

Illustration 21-1 summarizes, in their own words, what several major companies are leasing.

ILLUSTRATION 21-1

What Do Companies Lease?

Company (Ticker)	Description
Gap (GPS)	“We lease most of our store premises and some of our headquarters facilities and distribution centers.”
ExxonMobil Corp. (XOM)	“Minimum commitments for operating leases, shown on an undiscounted basis, cover drilling equipment, tankers, service stations, and other properties.”
JPMorgan Chase (JPM)	“JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes.”
Maytag Corp. (MYG)	“The Company leases real estate, machinery, equipment, and automobiles under operating leases, some of which have renewal options.”
McDonald’s Corp. (MCD)	“The Company was the lessee at 15,235 restaurant locations through ground leases (the Company leases the land and the Company or franchisee owns the building) and through improved leases (the Company leases land and buildings).”
Starbucks Corp. (SBUX)	“Starbucks leases retail stores, roasting and distribution facilities, and office space under operating leases.”
TXU Corp. (TXU)	“TXU Energy Holdings and TXU Electric Delivery have entered into operating leases covering various facilities and properties including generation plant facilities, combustion turbines, transportation equipment, mining equipment, data processing equipment, and office space.”
Viacom Inc. (VIA.B)	“The Company has long-term non-cancelable operating lease commitments for office space and equipment, transponders, studio facilities, and vehicles. The Company also enters into capital leases for satellite transponders.”

Source: Company 10-K filings.

The largest group of leased equipment involves information technology equipment, followed by assets in the transportation area (trucks, aircraft, rail), and then construction and agriculture.

Who Are the Players?

A **lease** is a contractual agreement between a lessor and a lessee. This arrangement gives the **lessee** the right to use specific property, owned by the **lessor**, for a specified period of time. In return for the use of the property, the lessee makes rental payments over the lease term to the lessor.

Who are the lessors that own this property? They generally fall into one of three categories:

1. Banks.
2. Captive leasing companies.
3. Independents.

Banks

Banks are the largest players in the leasing business. They have low-cost funds, which give them the advantage of being able to purchase assets at less cost than their competitors. Banks also have been more aggressive in the leasing markets. Deciding that there is money to be made in leasing, banks have expanded their product lines in this area. Finally, leasing transactions are now more standardized, which gives banks an advantage because they do not have to be as innovative in structuring lease arrangements. Thus, banks like **Wells Fargo**, **Chase**, **Citigroup**, and **PNC** have substantial leasing subsidiaries.

Captive Leasing Companies

Captive leasing companies are subsidiaries whose primary business is to perform leasing operations for the parent company. Companies like **Caterpillar Financial Services Corp.** (for Caterpillar), **Ford Motor Credit** (for Ford), and **IBM Global Financing** (for IBM) facilitate the sale of products to consumers. For example, suppose that **Sterling Construction Co.** wants to acquire a number of earthmovers from Caterpillar. In this case, Caterpillar Financial Services Corp. will offer to structure the transaction as a lease rather than as a purchase. Thus, Caterpillar Financial provides the financing rather than an outside financial institution.

Captive leasing companies have the point-of-sale advantage in finding leasing customers. That is, as soon as Caterpillar receives a possible equipment order, its leasing subsidiary can quickly develop a lease-financing arrangement. Furthermore, the captive lessor has product knowledge that gives it an advantage when financing the parent's product.

The current trend is for captives to focus primarily on their companies' products rather than do general lease financing. For example, **Boeing Capital** and **UPS Capital** are two captives that have left the general finance business to focus exclusively on their parent companies' products.

Independents

Independents are the final category of lessors. Independents have not done well over the last few years. Their market share has dropped fairly dramatically as banks and captive leasing companies have become more aggressive in the lease-financing area. Independents do not have point-of-sale access, nor do they have a low cost of funds advantage. What they are often good at is developing innovative contracts for lessees. In addition, they are starting to act as captive finance companies for some companies that do not have leasing subsidiaries. For example, **International Lease Finance Corp.** is one of the world's largest independent lessors.

According to recent data from the *Equipment Leasing and Finance Foundation 2015 Annual Report* on new business volume by lessor type, banks hold about 55 percent of the market, followed by captives at 31 percent. Independents had the remaining 14 percent of new business. Data on changes in market share show that both banks and independents have increased business at the expense of the captives. That is, from 2013 to 2014 banks' and independents' market shares had grown by 7.4 percent and 17.6 percent, respectively, while the captives' market share increased by only 1.3 percent.

Advantages of Leasing

The growth in leasing indicates that it often has some genuine advantages over owning property, such as:

1. **100% financing at fixed rates.** Leases are often signed without requiring any money down from the lessee. This helps the lessee conserve scarce cash—an especially desirable feature for new and developing companies. In addition, lease payments often remain fixed, which protects the lessee against inflation and increases in the cost of money. The following comment explains why companies choose a lease instead of a conventional loan: “Our local bank finally came up to 80 percent of the purchase price but wouldn’t go any higher, and they wanted a floating interest rate. We just couldn’t afford the down payment, and we needed to lock in a final payment rate we knew we could live with.”
2. **Protection against obsolescence.** Leasing equipment reduces risk of obsolescence to the lessee and in many cases passes the risk of residual value to the lessor. For example, **Merck** (a pharmaceutical maker) leases computers. Under the lease agreement, Merck may turn in an old computer for a new model at any time, canceling the old lease and writing a new one. The lessor adds the cost of the new lease to the balance due on the old lease, less the old computer’s trade-in value. As one treasurer remarked, “Our instinct is to purchase.” But if a new computer is likely to come along in a short time, “then leasing is just a heck of a lot more convenient than purchasing.” Naturally, the lessor also protects itself by requiring the lessee to pay higher rental payments or provide additional payments if the lessee does not maintain the asset.
3. **Flexibility.** Lease agreements may contain less restrictive provisions than other debt agreements. Innovative lessors can tailor a lease agreement to the lessee’s special needs. For instance, the duration of the lease—the **lease term**—may be anything from a short period of time to the entire expected economic life of the asset. The rental payments may be level from year to year, or they may increase or decrease in amount. The payment amount may be predetermined or may vary with sales, the prime interest rate, the Consumer Price Index, or some other factor. In most cases, the rent is set to enable the lessor to recover the cost of the asset plus a fair return over the life of the lease.
4. **Less costly financing.** Some companies find leasing cheaper than other forms of financing. For example, start-up companies in depressed industries or companies in low tax brackets may lease to claim tax benefits that they might otherwise lose. Depreciation deductions offer no benefit to companies that have little if any taxable income. Through leasing, the leasing companies or financial institutions use these tax benefits. They can then pass some of these tax benefits back to the user of the asset in the form of lower rental payments.
5. **Tax advantages.** In some cases, companies can “have their cake and eat it too” with tax advantages that leases offer. That is, for financial reporting purposes, companies do not report an asset or a liability for the lease arrangement. For tax purposes, however, companies can capitalize and depreciate the leased asset. As a result, a company takes deductions earlier rather than later and also reduces its taxes. A common vehicle for this type of transaction is a “synthetic lease” arrangement, such as that described in the opening story for **Krispy Kreme**.
6. **Off-balance-sheet financing.** Certain leases do not add debt on a balance sheet or affect financial ratios. In fact, they may add to borrowing capacity.¹ Such **off-balance-sheet financing** is critical to some companies.

INTERNATIONAL PERSPECTIVE

Some companies “double dip” on the international level too. The leasing rules of the lessor’s and lessee’s countries may differ, permitting both parties to own the asset. Thus, both lessor and lessee receive the tax benefits related to depreciation.

¹As demonstrated later in this chapter, certain types of lease arrangements are not capitalized on the balance sheet. The liabilities section is thereby relieved of large future lease commitments that, if recorded, would adversely affect the debt to equity ratio. The reluctance to record lease obligations as liabilities is one of the primary reasons some companies resist capitalized lease accounting.

WHAT DO THE NUMBERS MEAN?

OFF-BALANCE-SHEET FINANCING

As shown in our opening story, airlines use lease arrangements extensively. This results in a great deal of off-balance-sheet

financing. The following chart indicates that many airlines that lease aircraft understate debt levels by a substantial amount.

Airlines are not the only ones playing the off-balance-sheet game. A recent study estimates that for S&P 500 companies, off-balance-sheet lease obligations total more than one-half trillion dollars, or roughly three percent of market value. Thus, analysts must adjust reported debt levels for the

effects of non-capitalized leases. A methodology for making this adjustment is discussed in Eugene A. Imhoff, Jr., Robert C. Lipe, and David W. Wright, "Operating Leases: Impact of Constructive Capitalization," *Accounting Horizons* (March 1991).

Source: D. Zion and A. Varshney, "Leases Landing on Balance Sheets," *Credit Suisse Equity Research* (August 17, 2010).

Conceptual Nature of a Lease

If **Delta** borrows \$47 million on a 10-year note from **Bank of America** to purchase a Boeing 737 jet plane, Delta should clearly report an asset and related liability at that amount on its balance sheet. Similarly, if Delta purchases the 737 for \$47 million directly from Boeing through an installment purchase over 10 years, it should obviously report an asset and related liability (i.e., it should "capitalize" the installment transaction).

However, what if Delta **leases** the Boeing 737 for 10 years from **International Lease Finance Corp. (ILFC)**—the world's largest lessor of airplanes—through a noncancelable lease transaction with payments of the same amount as the installment purchase transaction? In that case, opinion differs over how to report this transaction. The various views on **capitalization of leases** are as follows.

1. **Do not capitalize any leased assets.** This view considers capitalization inappropriate because Delta does not own the property. Furthermore, a lease is an "executory" contract requiring continuing performance by both parties. Because companies do not currently capitalize other executory contracts (such as purchase commitments and employment contracts), they should not capitalize leases either.
2. **Capitalize leases that are similar to installment purchases.** This view holds that companies should report transactions in accordance with their economic substance. Therefore, if companies capitalize installment purchases, they should also capitalize leases that have similar characteristics. For example, Delta makes the same payments over a 10-year period for either a lease or an installment purchase. Lessees make rental payments, whereas owners make mortgage payments.

UNDERLYING CONCEPTS

The issue of how to report leases is the classic case of substance versus form. Although legal title does not technically pass in lease transactions, the benefits from the use of the property do transfer.

Why should the financial statements not report these transactions in the same manner?

3. **Capitalize all long-term leases.** This approach requires only the long-term right to use the property in order to capitalize. This property-rights approach capitalizes all long-term leases.²
4. **Capitalize firm leases where the penalty for nonperformance is substantial.** A final approach advocates capitalizing only “firm” (noncancelable) contractual rights and obligations. “Firm” means that it is unlikely to avoid performance under the lease without a severe penalty.

In short, the various viewpoints range from no capitalization to capitalization of all leases. The FASB apparently agrees with the capitalization approach when the lease is similar to an installment purchase. It notes that Delta **should capitalize a lease that transfers substantially all of the benefits and risks of property ownership, provided the lease is noncancelable.** **Noncancelable** means that Delta can cancel the lease contract only upon the outcome of some remote contingency, or that the cancellation provisions and penalties of the contract are so costly to Delta that cancellation probably will not occur.

This viewpoint leads to three basic conclusions. (1) Companies must identify the characteristics that indicate the transfer of substantially all of the benefits and risks of ownership. (2) The same characteristics should apply consistently to the lessee and the lessor. (3) Those leases that do **not** transfer substantially all the benefits and risks of ownership are operating leases. Companies should not capitalize operating leases. Instead, companies should account for them as rental payments and receipts.

LEARNING OBJECTIVE 2

Describe the accounting for leases by lessees.

ACCOUNTING BY THE LESSEE

If Delta Airlines (the lessee) **capitalizes** a lease, it records an asset and a liability generally equal to the present value of the rental payments. ILFC (the lessor), having transferred substantially all the benefits and risks of ownership, recognizes a sale by removing the asset from the balance sheet and replacing it with a receivable. The typical journal entries for Delta and ILFC, assuming leased and capitalized equipment, appear as shown in Illustration 21-2.

ILLUSTRATION 21-2

Journal Entries for Capitalized Lease

Delta (Lessee)		ILFC (Lessor)	
Leased Equipment	XXX	Lease Receivable	XXX
Lease Liability	XXX	Equipment	XXX

Having capitalized the asset, Delta records depreciation on the leased asset. Both ILFC and Delta treat the lease rental payments as consisting of interest and principal.

If Delta does not capitalize the lease, it does not record an asset, nor does ILFC remove one from its books. When Delta makes a lease payment, it records rental expense; ILFC recognizes rental revenue.

²Capitalization of most leases (based on either a right of use or on noncancelable rights and obligations) has the support of financial analysts. See Peter H. Knutson, “Financial Reporting in the 1990s and Beyond,” Position Paper (Charlottesville, Va.: AIMR, 1993); and Warren McGregor, “Accounting for Leases: A New Approach,” Special Report (Norwalk, Conn.: FASB, 1996). The joint FASB/IASB project on lease accounting is based on a right-of-use model, which will require expanded capitalization of lease assets and liabilities. See <http://www.fasb.org> (click on the “Projects” tab).

In order to record a lease as a **capital lease**, the lease must be noncancelable. Further, it must meet one or more of the four criteria listed in Illustration 21-3.

ILLUSTRATION 21-3
Capitalization Criteria for Lessee

See the FASB
Codification
References
(page 1254).

Delta classifies and accounts for leases that **do not meet any of the four criteria** as **operating leases**. Illustration 21-4 shows that a lease meeting any one of the four criteria results in the lessee having a capital lease.

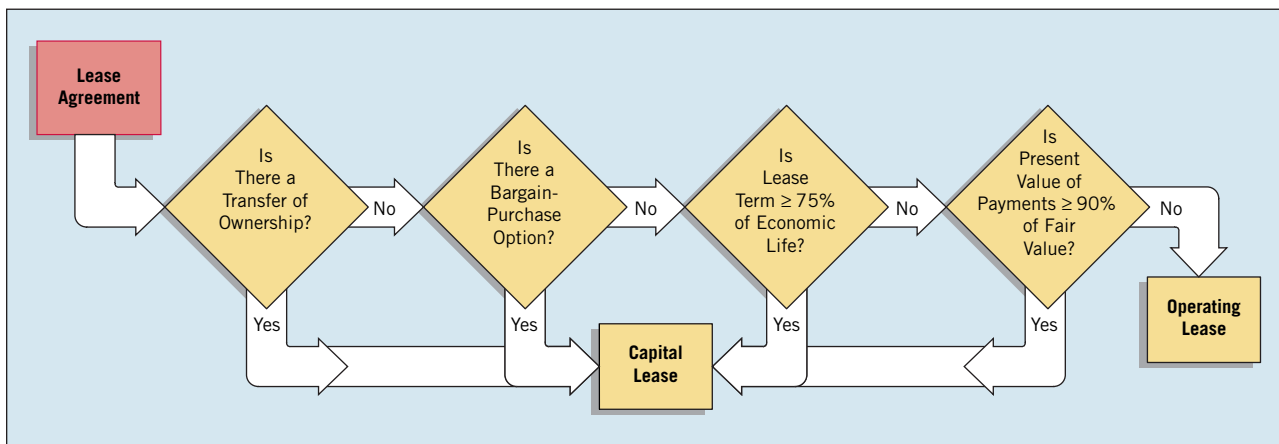

ILLUSTRATION 21-4
Diagram of Lessee's Criteria for Lease Classification

In keeping with the FASB's reasoning that a company consumes a significant portion of the value of the asset in the first 75 percent of its life, the lessee applies neither the third nor the fourth criterion when the inception of the lease occurs during the last 25 percent of the asset's life.

Capitalization Criteria

Three of the four **capitalization criteria** that apply to lessees are controversial and can be difficult to apply in practice. We discuss each of the criteria in detail on the following pages.

Transfer of Ownership Test

If the lease transfers ownership of the asset to the lessee, it is a capital lease. This criterion is not controversial and easily implemented in practice.

Bargain-Purchase Option Test

A **bargain-purchase option** allows the lessee to purchase the leased property for a price that is **significantly lower** than the property's expected fair value at the date the option becomes exercisable. At the inception of the lease, the difference between the option price and the expected fair value must be large enough to make exercise of the option reasonably assured.

³We define a bargain-purchase option in the next section.

For example, assume that Brett's Delivery Service was to lease a Honda Accord for \$599 per month for 40 months, with an option to purchase for \$100 at the end of the 40-month period. If the estimated fair value of the Honda Accord is \$3,000 at the end of the 40 months, the \$100 option to purchase is clearly a bargain. Therefore, Brett must capitalize the lease. In other cases, the criterion may not be as easy to apply, and determining *now* that a certain *future* price is a bargain can be difficult.

Economic Life Test (75% Test)

If the lease period equals or exceeds 75 percent of the asset's economic life, the lessor transfers most of the risks and rewards of ownership to the lessee. Capitalization is therefore appropriate. However, determining the lease term and the economic life of the asset can be troublesome.

The **lease term** is generally considered to be the fixed, noncancelable term of the lease. However, a bargain-renewal option, if provided in the lease agreement, can extend this period. A **bargain-renewal option** allows the lessee to renew the lease for a rental that is lower than the expected fair rental at the date the option becomes exercisable. At the inception of the lease, the difference between the renewal rental and the expected fair rental must be great enough to make exercise of the option to renew reasonably assured.

For example, assume that **Home Depot** leases **Dell** PCs for two years at a rental of \$100 per month per computer and subsequently can lease them for \$10 per month per computer for another two years. The lease clearly offers a bargain-renewal option; the lease term is considered to be four years. However, with bargain-renewal options, as with bargain-purchase options, it is sometimes difficult to determine what is a bargain.⁴

Determining estimated economic life can also pose problems, especially if the leased item is a specialized item or has been used for a significant period of time. For example, determining the economic life of a nuclear core is extremely difficult. It is subject to much more than normal "wear and tear." As indicated earlier, the FASB takes the position that if the lease starts during the last 25 percent of the life of the asset, companies cannot use the economic life test to classify a lease as a capital lease.

INTERNATIONAL PERSPECTIVE

IFRS does not specify an exact percentage, such as 90%. Instead, it uses the term "substantially all." This difference illustrates the distinction between rules-based and principles-based standards.

Recovery of Investment Test (90% Test)

If the present value of the minimum lease payments equals or exceeds 90 percent of the fair value of the asset, then a lessee like Delta should capitalize the leased asset. Why? If the present value of the minimum lease payments is reasonably close to the fair value of the aircraft, Delta is effectively purchasing the asset.

Determining the present value of the minimum lease payments involves three important concepts: (1) minimum lease payments, (2) executory costs, and (3) discount rate.

Minimum Lease Payments. Delta is obligated to make, or expected to make, **minimum lease payments** in connection with the leased property. These payments include the following.

1. **Minimum rental payments.** Minimum rental payments are those that Delta must make to ILFC under the lease agreement. In some cases, the minimum rental payments may equal the minimum lease payments. However, the minimum lease payments may also include a guaranteed residual value (if any), penalty for failure to renew, or a bargain-purchase option (if any), as we note on the next page.

⁴The original lease term is also extended for leases having the following: substantial penalties for nonrenewal, periods for which the lessor has the option to renew or extend the lease, renewal periods preceding the date a bargain-purchase option becomes exercisable, and renewal periods in which any lessee guarantees of the lessor's debt are expected to be in effect or in which there will be a loan outstanding from the lessee to the lessor. The lease term, however, can never extend beyond the time a bargain-purchase option becomes exercisable. [2]

2. **Guaranteed residual value.** The residual value is the estimated fair value of the leased property at the end of the lease term. ILFC may transfer the risk of loss to Delta or to a third party by obtaining a guarantee of the estimated residual value. The **guaranteed residual value** is either (1) the certain or determinable amount that Delta will pay ILFC at the end of the lease to purchase the aircraft at the end of the lease, or (2) the amount Delta or the third party guarantees that ILFC will realize if the aircraft is returned. (**Third-party guarantors** are, in essence, insurers who for a fee assume the risk of deficiencies in leased asset residual value.) If not guaranteed in full, the **unguaranteed residual value** is the estimated residual value exclusive of any portion guaranteed.⁵
3. **Penalty for failure to renew or extend the lease.** The amount Delta must pay if the agreement specifies that it must extend or renew the lease, and it fails to do so.
4. **Bargain-purchase option.** As we indicated earlier (in item 1), an option given to Delta to purchase the aircraft at the end of the lease term at a price that is fixed sufficiently below the expected fair value, so that, at the inception of the lease, purchase is reasonably assured.

Delta excludes executory costs (defined below) from its computation of the present value of the minimum lease payments.

Executory Costs. Like most assets, leased tangible assets incur insurance, maintenance, and tax expenses—called **executory costs**—during their economic life. If ILFC retains responsibility for the payment of these “ownership-type costs,” **it should exclude**, in computing the present value of the minimum lease payments, a portion of each lease payment that represents executory costs. Executory costs do not represent payment on or reduction of the obligation.

Many lease agreements specify that the lessee directly pays executory costs to the appropriate third parties. In these cases, the lessor can use the rental payment **without adjustment** in the present value computation.

Discount Rate. A lessee like Delta generally computes the present value of the minimum lease payments using its **incremental borrowing rate**. This rate is defined as: “The rate that, at the inception of the lease, the lessee would have incurred to borrow the funds necessary to buy the leased asset on a secured loan with repayment terms similar to the payment schedule called for in the lease.” **[4]**

To determine whether the present value of these payments is less than 90 percent of the fair value of the property, Delta discounts the payments using its incremental borrowing rate. Determining the incremental borrowing rate often requires judgment because the lessee bases it on a hypothetical purchase of the property.

However, there is one exception to this rule. If (1) Delta knows the **implicit interest rate computed by ILFC** and (2) it is less than Delta’s incremental borrowing rate, then Delta **must use ILFC’s implicit rate**. What is the **interest rate implicit in the lease**? It is the discount rate that, when applied to the minimum lease payments and any unguaranteed residual value accruing to the lessor, causes the aggregate present value to equal the fair value of the leased property to the lessor. **[5]**

The purpose of this exception is twofold. First, **the implicit rate of ILFC is generally a more realistic rate** to use in determining the amount (if any) to report as the asset and related liability for Delta. Second, the guideline ensures that Delta **does not use an artificially high incremental borrowing rate** that would cause the present value of the minimum lease payments to be less than 90 percent of the fair value of the aircraft. Use of such a rate would thus make it possible to avoid capitalization of the asset and related liability.

⁵A lease provision requiring the lessee to make up a residual value deficiency that is attributable to damage, extraordinary wear and tear, or excessive usage is not included in the minimum lease payments. Lessees recognize such costs as period costs when incurred. **[3]**

Delta may argue that it cannot determine the implicit rate of the lessor and therefore should use the higher rate. However, in most cases, Delta can approximate the implicit rate used by ILFC. The determination of whether or not a reasonable estimate could be made will require judgment, particularly where the result from using the incremental borrowing rate comes close to meeting the 90 percent test. Because Delta **may not capitalize the leased property at more than its fair value** (as we discuss later), it cannot use an excessively low discount rate.

Asset and Liability Accounted for Differently

In a capital lease transaction, Delta uses the lease as a source of financing. ILFC finances the transaction (provides the investment capital) through the leased asset. Delta makes rent payments, which actually are installment payments. Therefore, over the life of the aircraft rented, **the rental payments to ILFC constitute a payment of principal plus interest.**

Asset and Liability Recorded

Under the capital lease method, Delta treats the lease transaction as if it purchases the aircraft in a financing transaction. That is, Delta acquires the aircraft and creates an obligation. Therefore, it records a capital lease as an asset and a liability at the lower of (1) the present value of the minimum lease payments (excluding executory costs) or (2) the fair value of the leased asset at the inception of the lease. The rationale for this approach is that companies should not record a leased asset for more than its fair value.

Depreciation Period

One troublesome aspect of accounting for the depreciation of the capitalized leased asset relates to the period of depreciation. If the lease agreement transfers ownership of the asset to Delta (criterion 1) or contains a bargain-purchase option (criterion 2), Delta depreciates the aircraft consistent with its normal depreciation policy for other aircraft, **using the economic life of the asset.**

On the other hand, if the lease does not transfer ownership or does not contain a bargain-purchase option, then Delta depreciates it over the **term of the lease.** In this case, the aircraft reverts to ILFC after a certain period of time.

Effective-Interest Method

Throughout the term of the lease, Delta uses the **effective-interest method** to allocate each lease payment between principal and interest. This method produces a periodic interest expense equal to a constant percentage of the carrying value of the lease obligation. When applying the effective-interest method to capital leases, Delta must use the same discount rate that determines the present value of the minimum lease payments.

Depreciation Concept

Although Delta computes the amounts initially capitalized as an asset and recorded as an obligation at the same present value, the **depreciation of the aircraft and the discharge of the obligation are independent accounting processes** during the term of the lease. It should depreciate the leased asset by applying conventional depreciation methods: straight-line, sum-of-the-years'-digits, declining-balance, units of production, etc. The FASB uses the term "amortization" more frequently than "depreciation" to recognize intangible leased property rights. We prefer "depreciation" to describe the write-off of a tangible asset's expired services.

Capital Lease Method (Lessee)

To illustrate a capital lease, assume that **Caterpillar Financial Services Corp.** (a subsidiary of Caterpillar) and **Sterling Construction Corp.** sign a lease agreement dated

January 1, 2017, that calls for Caterpillar to lease a front-end loader to Sterling beginning January 1, 2017. The terms and provisions of the lease agreement, and other pertinent data, are as follows.

- The term of the lease is five years. The lease agreement is noncancelable, requiring equal rental payments of \$25,981.62 at the beginning of each year (annuity-due basis).
- The loader has a fair value at the inception of the lease of \$100,000, an estimated economic life of five years, and no residual value.
- Sterling pays all of the executory costs directly to third parties except for the property taxes of \$2,000 per year, which is included as part of its annual payments to Caterpillar.
- The lease contains no renewal options. The loader reverts to Caterpillar at the termination of the lease.
- Sterling's incremental borrowing rate is 11 percent per year.
- Sterling depreciates, on a straight-line basis, similar equipment that it owns.
- Caterpillar sets the annual rental to earn a rate of return on its investment of 10 percent per year; Sterling knows this fact.

The lease meets the criteria for classification as a capital lease for the following reasons.

1. The lease term of five years, being equal to the equipment's estimated economic life of five years, satisfies the 75 percent test.
2. The present value of the minimum lease payments (\$100,000 as computed below) exceeds 90 percent of the fair value of the loader (\$100,000).

The minimum lease payments are \$119,908.10 ($\$23,981.62 \times 5$). Sterling computes the amount capitalized as leased assets as the present value of the minimum lease payments (excluding executory costs—property taxes of \$2,000) as shown in Illustration 21-5.

$$\begin{aligned} \text{Capitalized amount} &= (\$25,981.62 - \$2,000) \times \text{Present value of an annuity due of 1 for} \\ &\quad \text{5 periods at 10\% (Table 6-5)} \\ &= \$23,981.62 \times 4.16986 \\ &= \mathbf{\$100,000} \end{aligned}$$

ILLUSTRATION 21-5

Computation of Capitalized Lease Payments

Sterling uses Caterpillar's implicit interest rate of 10 percent instead of its incremental borrowing rate of 11 percent because (1) it is lower and (2) it knows about it.⁶

Sterling records the capital lease on its books on January 1, 2017, as:

Leased Equipment (under capital leases)	100,000
Lease Liability	100,000

Note that the entry records the obligation at the net amount of \$100,000 (the present value of the future rental payments) rather than at the gross amount of \$119,908.10 ($\$23,981.62 \times 5$).

Sterling records the **first lease payment on January 1, 2017**, as follows.

Property Tax Expense	2,000.00
Lease Liability	23,981.62
Cash	25,981.62

⁶If Sterling has an incremental borrowing rate of, say, 9 percent (lower than the 10 percent rate used by Caterpillar) and it did not know the rate used by Caterpillar, the present value computation would yield a capitalized amount of \$101,675.35 ($\$23,981.62 \times 4.23972$). And, because this amount exceeds the \$100,000 fair value of the equipment, Sterling should capitalize the \$100,000 and use 10 percent as its effective rate for amortization of the lease obligation.

 **Calculator Solution for Lease Payment**

	Inputs	Answer
 N	5	
 I	10	
 PV	?	100,000
 PMT	-23,981.59*	
 FV	0	

*Set payments at beginning of period.

Each lease payment of \$25,981.62 consists of three elements: (1) a reduction in the lease liability, (2) a financing cost (interest expense), and (3) executory costs (property taxes). The total financing cost (interest expense) over the term of the lease is \$19,908.10. This amount is the difference between the present value of the lease payments (\$100,000) and the actual cash disbursed, net of executory costs (\$119,908.10). Therefore, the annual interest expense, applying the effective-interest method, is a function of the outstanding liability, as Illustration 21-6 shows.

ILLUSTRATION 21-6

Lease Amortization
Schedule for Lessee—
Annuity-Due Basis

STERLING CONSTRUCTION LEASE AMORTIZATION SCHEDULE ANNUITY-DUE BASIS					
Date	Annual Lease Payment (a)	Executory Costs (b)	Interest (10%) on Liability (c)	Reduction of Lease Liability (d)	Lease Liability (e)
1/1/17					\$100,000.00
1/1/17	\$ 25,981.62	\$ 2,000	\$ —	\$ 23,981.62	76,018.38
1/1/18	25,981.62	2,000	7,601.84	16,379.78	59,638.60
1/1/19	25,981.62	2,000	5,963.86	18,017.76	41,620.84
1/1/20	25,981.62	2,000	4,162.08	19,819.54	21,801.30
1/1/21	25,981.62	2,000	2,180.32*	21,801.30	—
	<u>\$129,908.10</u>	<u>\$10,000</u>	<u>\$19,908.10</u>	<u>\$100,000.00</u>	

(a) Lease payment as required by lease.
 (b) Executory costs included in rental payment.
 (c) Ten percent of the preceding balance of (e) except for 1/1/17; since this is an annuity due, no time has elapsed at the date of the first payment and no interest has accrued.
 (d) (a) minus (b) and (c).
 (e) Preceding balance minus (d).
 *Rounded by 19 cents.

At the end of its fiscal year, December 31, 2017, Sterling records **accrued interest** as follows.

Interest Expense	7,601.84
Interest Payable	7,601.84

Depreciation of the leased equipment over its five-year lease term, applying Sterling's normal depreciation policy (straight-line method), results in the following entry on December 31, 2017.

Depreciation Expense (capital leases)	20,000
Accumulated Depreciation—Capital Leases (\$100,000 ÷ 5 years)	20,000

At December 31, 2017, Sterling separately identifies the assets recorded under capital leases on its balance sheet. Similarly, it separately identifies the related obligations. Sterling classifies the portion due within one year or the operating cycle, whichever is longer, with current liabilities, and the rest with noncurrent liabilities. For example, the current portion of the December 31, 2017, total obligation of \$76,018.38 in Sterling's amortization schedule is the amount of the reduction in the obligation in 2018, or \$16,379.78. Illustration 21-7 shows the liabilities section as it relates to lease transactions at December 31, 2017.

ILLUSTRATION 21-7

Reporting Current and
Noncurrent Lease Liabilities

<u>Current liabilities</u>	
Interest payable	\$ 7,601.84
Lease liability	16,379.78
<u>Noncurrent liabilities</u>	
Lease liability	59,638.60

Sterling records the lease payment of January 1, 2018, as follows.

Property Tax Expense	2,000.00	
Interest Payable	7,601.84	
Lease Liability	16,379.78	
Cash		25,981.62

Entries through 2021 follow the pattern above. Sterling records its other executory costs (insurance and maintenance) in a manner similar to how it records any other operating costs incurred on assets it owns.

Upon expiration of the lease, Sterling has fully amortized the amount capitalized as leased equipment. It also has fully discharged its lease obligation. If Sterling does not purchase the loader, it returns the equipment to Caterpillar. Sterling then removes the leased equipment and related accumulated depreciation accounts from its books.⁷

If Sterling purchases the equipment at termination of the lease, at a price of \$5,000, and the estimated life of the equipment changes from five to seven years, it makes the following entry.

Equipment (\$100,000 + \$5,000)	105,000	
Accumulated Depreciation—Capital Leases	100,000	
Leased Equipment (under capital leases)		100,000
Accumulated Depreciation—Equipment		100,000
Cash		5,000

Operating Method (Lessee)

Under the **operating method**, rent expense (and the associated liability) accrues day by day to the lessee as it uses the property. **The lessee assigns rent to the periods benefiting from the use of the asset and ignores, in the accounting, any commitments to make future payments.** The lessee makes appropriate accruals or deferrals if the accounting period ends between cash payment dates.

For example, assume that the capital lease illustrated in the previous section did not qualify as a capital lease. Sterling therefore accounts for it as an operating lease. The first-year charge to operations is now \$25,981.62, the amount of the rental payment. Sterling records this payment on January 1, 2017, as follows.

Rent Expense	25,981.62	
Cash		25,981.62

Sterling does not report the loader, as well as any long-term liability for future rental payments, on the balance sheet. Sterling reports rent expense on the income statement. And, as discussed later in the chapter, **Sterling must disclose all operating leases that have noncancelable lease terms in excess of one year.**

WHAT DO THE NUMBERS MEAN?

Accounting for operating leases would appear routine, so it is unusual for a bevy of companies in a single industry—restaurants—to get caught up in the accounting rules for operating leases. Getting the accounting right is particularly important for restaurant chains because they make extensive use of leases for their restaurants and equipment.

The problem stems from the way most property (and equipment) leases cover a specific number of years (the so-called *primary lease term*) as well as renewal periods

RESTATEMENTS ON THE MENU

(sometimes referred to as the *option term*). In some cases, companies were calculating their lease expense for the primary term but depreciating lease-related assets over both the primary and option terms. This practice resulted in understating the total cost of the lease and thus boosted earnings.

For example, the CFO at **CKE Restaurants Inc.**, owner of the Hardee's and Carl's Jr. chains, noted that CKE ran into trouble because it was not consistent in calculating the lease and depreciation expense. Correcting the error at CKE reduced

⁷If Sterling purchases the front-end loader during the term of a "capital lease," it accounts for it like a renewal or extension of a capital lease. "Any difference between the purchase price and the carrying amount of the lease obligation shall be recorded as an adjustment of the carrying amount of the asset." [6]

earnings by nine cents a share in fiscal 2002, nine cents a share in fiscal 2003, and 10 cents a share in fiscal 2004. The company now uses the shorter, primary lease terms for calculating both lease expense and depreciation. The change increases depreciation annually, which in turn decreases total assets.

CKE was not alone in improper operating lease accounting. Notable restaurateurs who ran afoul of the lease rules included **Brinker International Inc.**, operator of Chili's;

Darden Restaurants Inc., which operates Red Lobster and Olive Garden; and **Jack in the Box**. To correct their operating lease accounting, these restaurants reported restatements that resulted in lower earnings and assets.

These lease restatements spurred a renewed focus on restatements—both their causes and their consequences—and have led the SEC to modify its review practices to root out accounting errors that lead to restatements.

Sources: Steven D. Jones and Richard Gibson, *Wall Street Journal* (January 26, 2005), p. C3; and O. Usvyatsky, "Restatements: Where They Come From," <http://www.auditanalytics.com/blog/> (August 2, 2013).

Comparison of Capital Lease with Operating Lease

As we indicated, if accounting for the lease as an operating lease, the first-year charge to operations is \$25,981.62, the amount of the rental payment. Treating the transaction as a capital lease, however, results in a first-year charge of \$29,601.84: depreciation of \$20,000 (assuming straight-line), interest expense of \$7,601.84 (per Illustration 21-6), and executory costs of \$2,000. Illustration 21-8 shows that **while the total charges to operations are the same over the lease term whether accounting for the lease as a capital lease or as an operating lease, under the capital lease treatment the charges are higher in the earlier years and lower in the later years.**⁸

ILLUSTRATION 21-8

Comparison of Charges to Operations—Capital vs. Operating Leases

STERLING CONSTRUCTION SCHEDULE OF CHARGES TO OPERATIONS CAPITAL LEASE VERSUS OPERATING LEASE						
Year	Capital Lease			Total Charge	Operating Lease Charge	Difference
	Depreciation	Executory Costs	Interest			
2017	\$ 20,000	\$ 2,000	\$ 7,601.84	\$ 29,601.84	\$ 25,981.62	\$3,620.22
2018	20,000	2,000	5,963.86	27,963.86	25,981.62	1,982.24
2019	20,000	2,000	4,162.08	26,162.08	25,981.62	180.46
2020	20,000	2,000	2,180.32	24,180.32	25,981.62	(1,801.30)
2021	20,000	2,000	—	22,000.00	25,981.62	(3,981.62)
	<u>\$100,000</u>	<u>\$10,000</u>	<u>\$19,908.10</u>	<u>\$129,908.10</u>	<u>\$129,908.10</u>	<u>\$ -0-</u>

If using an accelerated method of depreciation, the differences between the amounts charged to operations under the two methods would be even larger in the earlier and later years.

In addition, using the capital lease approach results in an asset and related liability of \$100,000 initially reported on the balance sheet. The lessee would not report any asset or liability under the operating method. Therefore, the following differences occur if using a capital lease instead of an operating lease.

1. An increase in the amount of reported debt (both short-term and long-term).
2. An increase in the amount of total assets (specifically long-lived assets).
3. A lower income early in the life of the lease and, therefore, lower retained earnings.

⁸The higher charges in the early years is one reason lessees are reluctant to adopt the capital lease accounting method. Lessees (especially those of real estate) claim that it is really no more costly to operate the leased asset in the early years than in the later years. Thus, they advocate an even charge similar to that provided by the operating method.

Thus, many companies believe that capital leases negatively impact their financial position: Their debt to total equity ratio increases, and their rate of return on total assets decreases. As a result, the business community resists capitalizing leases.

Whether this resistance is well founded is debatable. From a cash flow point of view, the company is in the same position whether accounting for the lease as an operating or a capital lease. Managers often argue against capitalization for several reasons. First, capitalization can more easily lead to **violation of loan covenants**. It also can affect the **amount of compensation received by owners** (for example, a stock compensation plan tied to earnings). Finally, capitalization can **lower rates of return** and **increase debt to equity relationships**, making the company less attractive to present and potential investors.⁹

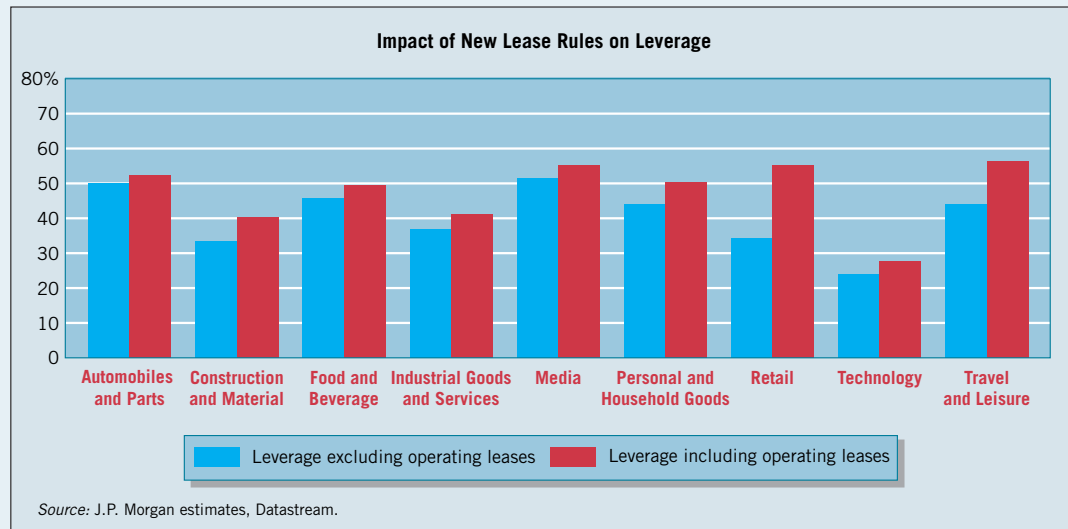

EVOLVING ISSUE

ARE YOU LIABLE?

Under current accounting rules, companies can keep the obligations associated with operating leases off the balance sheet. (For example, see the “What Do the Numbers Mean?” box on page 1199 for the effects of this approach for airlines.) This approach may change depending on the FASB’s new lease accounting rule. The current plans for a new rule in this area should result in many more operating leases on balance sheets. Analysts have estimated the expected impact of a new rule. As shown in the table to the right, if the FASB (and IASB) issue a new rule on operating leases, a company like **Walgreen** could see its liabilities jump a whopping 216 percent.

Retailer	Estimated Off-Balance-Sheet Lease Liabilities	Jump in Liabilities If They Were on the Balance Sheet
McDonald's	\$ 7.996 billion	149%
Walgreen	23.212	216
Home Depot	5.846	27
Starbucks	3.685	146
CVS	26.913	104

And it is not just retailers who would be impacted. A J.P. Morgan study estimates the following impacts for several industries.

As indicated, the expected effects are significant, with all industries expecting an increase in their debt levels and some (retail and travel and leisure) seeing a more than 10 percent increase in leverage ratios.

This is not a pretty picture, but investors need to see it if they are to fully understand a company’s lease obligations.

Sources: Nanette Byrnes, “You May Be Liable for That Lease,” *BusinessWeek* (June 5, 2006), p. 76; J. E. Ketz, “Operating Lease Obligations to Be Capitalized,” *Smartpros* (August 2010), <http://accounting.smartpros.com/x70304.xml>; and P. Elwin and S. C. Fernandes, “Leases on B/S from 2017? Retailers and Transport Will Be Hit Hard in Leverage Terms,” *Global Equity Research*, J.P. Morgan Securities (May 17, 2013).

⁹One study indicates that management’s behavior did change as a result of the leasing rules. For example, many companies restructure their leases to avoid capitalization. Others increase their purchases of assets instead of leasing. Still others, faced with capitalization, postpone their debt offerings or issue stock instead. However, note that the study found no significant effect on stock or bond prices as a result of capitalization of leases. See A. Rashad Abdel-khalik, “The Economic Effects on Lessees of FASB Statement No. 13, Accounting for Leases,” Research Report (Stamford, Conn.: FASB, 1981).

LEARNING OBJECTIVE 3

Describe the accounting for leases by lessors.

ACCOUNTING BY THE LESSOR

Earlier in this chapter, we discussed leasing's advantages to the lessee. Three important benefits are available to the lessor:

- 1. Interest revenue.** Leasing is a form of financing. Banks, captives, and independent leasing companies find leasing attractive because it provides competitive interest margins.
- 2. Tax incentives.** In many cases, companies that lease cannot use the tax benefit of the asset, but leasing allows them to transfer such tax benefits to another party (the lessor) in return for a lower rental rate on the leased asset. To illustrate, **Boeing Aircraft** might sell one of its 737 jet planes to a wealthy investor who needed only the tax benefit. The investor then leased the plane to a foreign airline, for whom the tax benefit was of no use. Everyone gained. Boeing sold its airplane, the investor received the tax benefit, and the foreign airline cheaply acquired a 737.¹⁰
- 3. High residual value.** Another advantage to the lessor is the return of the property at the end of the lease term. Residual values can produce very large profits. **Citigroup** at one time estimated that the commercial aircraft it was leasing to the airline industry would have a residual value of 5 percent of their purchase price. It turned out that they were worth 150 percent of their cost—a handsome profit. At the same time, if residual values decline, lessors can suffer losses when less-valuable leased assets are returned at the conclusion of the lease. At one time, automaker **Ford** took a \$2.1 billion write-down on its lease portfolio, when rising gas prices spurred dramatic declines in the resale values of leased trucks and SUVs. Such residual value losses led **Chrysler** to get out of the leasing business altogether.

Economics of Leasing

A lessor, such as Caterpillar Financial in our earlier example, determines the amount of the rental, basing it on the rate of return—the implicit rate—needed to justify leasing the front-end loader. In establishing the rate of return, Caterpillar considers the credit standing of Sterling Construction, the length of the lease, and the status of the residual value (guaranteed versus unguaranteed).

In the Caterpillar/Sterling example on pages 1204–1206 Caterpillar's implicit rate was 10 percent, the cost of the equipment to Caterpillar was \$100,000 (also fair value), and the estimated residual value was zero. Caterpillar determines the amount of the lease payment as follows.

ILLUSTRATION 21-9

Computation of Lease Payments

Fair value of leased equipment	\$100,000.00
Less: Present value of the residual value	—0—
Amount to be recovered by lessor through lease payments	<u>\$100,000.00</u>
Five beginning-of-the-year lease payments to yield a 10% return (\$100,000 ÷ 4.16986 ^a)	<u><u>\$ 23,981.62</u></u>
^a PV of an annuity due of 1 for 5 years at 10% (Table 6-5).	

If a residual value is involved (whether guaranteed or not), Caterpillar would not have to recover as much from the lease payments. Therefore, the lease payments would be less. (Illustration 21-16, on page 1217, shows this situation.)

¹⁰Some would argue that there is a loser—the U.S. government. The tax benefits enable the profitable investor to reduce or eliminate taxable income.

Classification of Leases by the Lessor

For accounting purposes, the lessor may classify leases as one of the following:

1. Operating leases.
2. Direct-financing leases.
3. Sales-type leases.

Illustration 21-10 presents two groups of capitalization criteria for the lessor. If at the date of inception the lessor agrees to a lease that meets **one or more** of the Group I criteria (1, 2, 3, and 4) and **both** of the Group II criteria (1 and 2), the lessor shall classify and account for the arrangement as a direct-financing lease or as a sales-type lease. [7] Note that the Group I criteria are identical to the criteria that must be met in order for a lessee to classify a lease as a capital lease, as shown in Illustration 21-3 (on page 1201).

Capitalization Criteria (Lessor)

Group I

- The lease transfers ownership of the property to the lessee.
- The lease contains a bargain-purchase option.
- The lease term is equal to 75 percent or more of the estimated economic life of the leased property.
- The present value of the minimum lease payments (excluding executory costs) equals or exceeds 90 percent of the fair value of the leased property.

Group II

- Collectibility of the payments required from the lessee is reasonably predictable.
- No important uncertainties surround the amount of unreimbursable costs yet to be incurred by the lessor under the lease (lessor's performance is substantially complete or future costs are reasonably predictable).

ILLUSTRATION 21-10

Capitalization Criteria
for Lessor

Why the Group II requirements? The profession wants to ensure that the lessor has really transferred control. If collectibility of payments is not predictable or if performance by the lessor is incomplete, then the criteria for revenue recognition have not been met. The lessor should therefore account for the lease as an operating lease.

For example, computer leasing companies at one time used to buy **IBM** equipment, lease the equipment, and remove the leased assets from their balance sheets. In leasing the assets, the computer lessors stated that they would substitute new IBM equipment if obsolescence occurred. However, when IBM introduced a new computer line, IBM refused to sell it to the computer leasing companies. As a result, a number of the lessors could not meet their contracts with their customers and had to take back the old equipment. The computer leasing companies therefore had to reinstate the assets they had taken off the books. Such a case demonstrates one reason for the Group II requirements.

The distinction for the lessor between a direct-financing lease and a sales-type lease is the presence or absence of a manufacturer's or dealer's profit (or loss). A sales-type lease involves a manufacturer's or dealer's profit, and a direct-financing lease does not. The profit (or loss) to the lessor is evidenced by the difference between the fair value of the leased property at the inception of the lease and the lessor's cost or carrying amount (book value).

Normally, sales-type leases arise when manufacturers or dealers use leasing as a means of marketing their products. For example, a computer manufacturer will lease its computer equipment (possibly through a captive) to businesses and institutions. Direct-financing leases generally result from arrangements with lessors that are primarily engaged in financing operations (e.g., banks). However, a lessor need not be a manufacturer or dealer to recognize a profit (or loss) at the inception of a lease that requires application of sales-type lease accounting.

INTERNATIONAL PERSPECTIVE

GAAP is consistent with *International Accounting Standard No. 17* (Accounting for Leases). However, the international standard is a relatively simple statement of basic principles, whereas the U.S. rules on leases are more prescriptive and detailed.

Lessors classify and account for all leases that do not qualify as direct-financing or sales-type leases as operating leases. Illustration 21-11 shows the circumstances under which a lessor classifies a lease as operating, direct-financing, or sales-type.

ILLUSTRATION 21-11

Diagram of Lessor's Criteria for Lease Classification

As a consequence of the additional Group II criteria for lessors, a lessor may classify a lease as an **operating** lease but the lessee may classify the same lease as a **capital** lease. In such an event, both the lessor and lessee will carry the asset on their books, and both will depreciate the capitalized asset.

For purposes of comparison with the lessee's accounting, we will illustrate only the operating and direct-financing leases in the following section. We will discuss the more complex sales-type lease later in the chapter.

Direct-Financing Method (Lessor)

Direct-financing leases are in substance the financing of an asset purchase by the lessee. In this type of lease, the lessor records a **lease receivable** instead of a leased asset. The lease receivable is the present value of the minimum lease payments. Remember that "minimum lease payments" include:

1. Rental payments (excluding executory costs).
2. Bargain-purchase option (if any).
3. Guaranteed residual value (if any).
4. Penalty for failure to renew (if any).

However, the lessor records the residual value, whether guaranteed or not. Also, recall that if the lessor pays any executory costs, then it should reduce the rental payment by that amount in computing minimum lease payments.

The following presentation, using the data from the preceding Caterpillar/Sterling example on page 1205, illustrates the accounting treatment for a direct-financing lease. We repeat here the information relevant to Caterpillar in accounting for this lease transaction.

1. The term of the lease is five years beginning January 1, 2017, noncancelable, and requires equal rental payments of \$25,981.62 at the beginning of each year. Payments include \$2,000 of executory costs (property taxes).

2. The equipment (front-end loader) has a cost of \$100,000 to Caterpillar, a fair value at the inception of the lease of \$100,000, an estimated economic life of five years, and no residual value.
3. Caterpillar incurred no initial direct costs in negotiating and closing the lease transaction.
4. The lease contains no renewal options. The equipment reverts to Caterpillar at the termination of the lease.
5. Collectibility is reasonably assured and Caterpillar incurs no additional costs (with the exception of the property taxes being collected from Sterling).
6. Caterpillar sets the annual lease payments to ensure a rate of return of 10 percent (implicit rate) on its investment as shown in Illustration 21-12.

Fair value of leased equipment	\$100,000.00
Less: Present value of residual value	-0-
Amount to be recovered by lessor through lease payments	<u>\$100,000.00</u>

^aPV of an annuity due of 1 for 5 years at 10% (Table 6-5).

ILLUSTRATION 21-12

Computation of Lease Payments

The lease meets the criteria for classification as a direct-financing lease for several reasons. (1) The lease term exceeds 75 percent of the equipment's estimated economic life. (2) The present value of the minimum lease payments exceeds 90 percent of the equipment's fair value. (3) Collectibility of the payments is reasonably assured. (4) Caterpillar incurs no further costs. It is not a sales-type lease because there is no difference between the fair value (\$100,000) of the loader and Caterpillar's cost (\$100,000).

The Lease Receivable is the present value of the minimum lease payments (excluding executory costs which are property taxes of \$2,000). Caterpillar computes it as follows.

Lease receivable = (\$25,981.62 – \$2,000) × Present value of an annuity due of 1 for 5 periods at 10% (Table 6-5)
= \$23,981.62 × 4.16986
= \$100,000

ILLUSTRATION 21-13

Computation of Lease Receivable

Caterpillar records the lease of the asset and the resulting receivable on January 1, 2017 (the inception of the lease), as follows.

Lease Receivable	100,000	
Equipment		100,000

Companies often **report** the lease receivable in the balance sheet as "Net investment in capital leases." Companies classify it either as current or noncurrent, depending on when they recover the net investment.¹¹

Caterpillar replaces its investment (the leased front-end loader, a cost of \$100,000), with a lease receivable. In a manner similar to Sterling's treatment of interest, Caterpillar applies the effective-interest method and recognizes interest revenue as a function of the lease receivable balance, as Illustration 21-14 (page 1214) shows.

¹¹In the notes to the financial statements (see Illustration 21-32, page 1228, for lessor disclosures by **Hewlett-Packard**), the lease receivable is reported at its gross amount (minimum lease payments plus the unguaranteed residual value). In addition, the lessor also reports total unearned interest related to the lease. As a result, some lessors record lease receivable on a gross basis and record the unearned interest in a separate account. We illustrate the net approach here because it is consistent with the accounting for the lessee.

Date	Annual Lease Payment	Executory Costs	Interest (10%) on Lease Receivable	Lease Receivable Recovery	Lease Receivable
	(a)	(b)	(c)	(d)	(e)
1/1/17					\$100,000.00
1/1/17	\$ 25,981.62	\$ 2,000.00	\$ –0–	\$ 23,981.62	76,018.38
1/1/18	25,981.62	2,000.00	7,601.84	16,379.78	59,638.60
1/1/19	25,981.62	2,000.00	5,963.86	18,017.76	41,620.84
1/1/20	25,981.62	2,000.00	4,162.08	19,819.54	21,801.30
1/1/21	25,981.62	2,000.00	2,180.32*	21,801.30	–0–
	<u>\$129,908.10</u>	<u>\$10,000.00</u>	<u>\$19,908.10</u>	<u>\$100,000.00</u>	

(a) Annual rental that provides a 10% return on net investment.
 (b) Executory costs included in rental payment.
 (c) Ten percent of the preceding balance of (e) except for 1/1/17.
 (d) (a) minus (b) and (c).
 (e) Preceding balance minus (d).
 *Rounded by 19 cents.

On January 1, 2017, Caterpillar records receipt of the first year's lease payment as follows.

Cash	25,981.62	
Lease Receivable		23,981.62
Property Tax Expense/Property Taxes Payable		2,000.00

On December 31, 2017, Caterpillar recognizes the interest revenue during the first year through the following entry.

Interest Receivable	7,601.84	
Interest Revenue (leases)		7,601.84

At December 31, 2017, Caterpillar reports the lease receivable in its balance sheet among current assets or noncurrent assets, or both. It classifies the portion due within one year or the operating cycle, whichever is longer, as a current asset, and the rest with noncurrent assets.

Illustration 21-15 shows the assets section as it relates to lease transactions at December 31, 2017.

ILLUSTRATION 21-15

Reporting Lease
Transactions by Lessor

<u>Current assets</u>	
Interest receivable	\$ 7,601.84
Lease receivable	16,379.78
<u>Noncurrent assets (investments)</u>	
Lease receivable	59,638.60

The following entries record receipt of the second year's lease payment and recognition of the interest.

January 1, 2018

Cash	25,981.62	
Lease Receivable		16,379.78
Interest Receivable		7,601.84
Property Tax Expense/Property Taxes Payable		2,000.00

December 31, 2018

Interest Receivable	5,963.86	
Interest Revenue (leases)		5,963.86

Journal entries through 2021 follow the same pattern except that Caterpillar records no entry in 2021 (the last year) for interest revenue. Because it fully collects the receivable by January 1, 2021, no balance (investment) is outstanding during 2021. Caterpillar **recorded no depreciation**. If Sterling buys the loader for \$5,000 upon expiration of the lease, Caterpillar recognizes disposition of the equipment as follows.

Cash	5,000	
Gain on Disposal of Equipment		5,000

Operating Method (Lessor)

Under the **operating method**, the lessor records each rental receipt as rental revenue. It **depreciates the leased asset similar to assets not leased**, with the depreciation expense of the period matched against the rental revenue. The amount of revenue recognized in each accounting period is a level amount (straight-line basis) regardless of the lease provisions, unless another systematic and rational basis better represents the time pattern in which the lessor derives benefit from the leased asset.

In addition to the depreciation charge, the lessor expenses maintenance costs and the cost of any other services performed under the provisions of the lease that pertain to the current accounting period. The lessor **amortizes over the life of the lease** any costs paid to independent third parties, such as appraisal fees, finder's fees, and costs of credit checks, usually on a straight-line basis.

To illustrate the operating method, assume that the direct-financing lease illustrated in the previous section does not qualify as a capital lease. Therefore, Caterpillar accounts for it as an operating lease. It records the cash rental receipt, assuming the \$2,000 was for property tax expense, as follows.

Cash	25,981.62	
Rent Revenue		25,981.62

Caterpillar records depreciation as follows (assuming a straight-line method, a cost basis of \$100,000, and a five-year life).

Depreciation Expense (leased equipment)	20,000	
Accumulated Depreciation—Equipment		20,000

If Caterpillar pays property taxes, insurance, maintenance, and other operating costs during the year, it records them as expenses chargeable against the gross rental revenues.

If Caterpillar owns plant assets that it uses in addition to those leased to others, the company **separately classifies the leased equipment and accompanying accumulated depreciation** as Equipment Leased to Others or Investment in Leased Property. If significant in amount or in terms of activity, Caterpillar separates the rental revenues and accompanying expenses in the income statement from sales revenue and cost of goods sold.

SPECIAL LEASE ACCOUNTING PROBLEMS

The features of lease arrangements that cause unique accounting problems are:

1. Residual values.
2. Sales-type leases (lessor).
3. Bargain-purchase options.

LEARNING OBJECTIVE 4

Describe the accounting and reporting for special features of lease arrangements.

4. Initial direct costs.
5. Current versus noncurrent classification.
6. Disclosure.

We discuss each of these features on the following pages.

Residual Values

Up to this point, in order to develop the basic accounting issues related to lessee and lessor accounting, we have generally ignored residual values. Accounting for residual values is complex and will probably provide you with the greatest challenge in understanding lease accounting.

Meaning of Residual Value

The **residual value** is the estimated fair value of the leased asset at the end of the lease term. Frequently, a significant residual value exists at the end of the lease term, especially when the economic life of the leased asset exceeds the lease term. If title does not pass automatically to the lessee (criterion 1) and if a bargain-purchase option does not exist (criterion 2), the lessee returns physical custody of the asset to the lessor at the end of the lease term.¹²

Guaranteed versus Unguaranteed

The residual value may be unguaranteed or guaranteed by the lessee. Sometimes the lessee agrees to make up any deficiency below a stated amount that the lessor realizes in residual value at the end of the lease term. In such a case, that stated amount is the **guaranteed residual value**.

The parties to a lease use guaranteed residual value in lease arrangements for two reasons. The first is a business reason: It protects the lessor against any loss in estimated residual value, thereby ensuring the lessor of the desired rate of return on investment. The second reason is an accounting benefit that you will learn from the discussion at the end of this chapter.

Lease Payments

A guaranteed residual value—by definition—has more assurance of realization than does an unguaranteed residual value. As a result, the lessor may adjust lease payments because of the increased certainty of recovery. After the lessor establishes this rate, it makes no difference from an accounting point of view whether the residual value is guaranteed or unguaranteed. The net investment that the lessor records (once the rate is set) will be the same.

Assume the same data as in the Caterpillar/Sterling illustrations except that Caterpillar estimates a residual value of \$5,000 at the end of the five-year lease term. In addition, Caterpillar assumes a 10 percent return on investment (ROI),¹³ whether the residual value is guaranteed or unguaranteed. Caterpillar would compute the amount of the lease payments as follows.

Contrast the foregoing lease payment amount to the lease payments of \$23,981.62 as computed in Illustration 21-9 (on page 1210), where no residual value existed. In the

¹²When the lease term and the economic life are not the same, the residual value and the salvage value of the asset will probably differ. For simplicity, we will assume that residual value and salvage value are the same, even when the economic life and lease term vary.

¹³Technically, the rate of return Caterpillar demands would differ depending upon whether the residual value was guaranteed or unguaranteed. To simplify the illustrations, we are ignoring this difference in subsequent sections.

CATERPILLAR'S COMPUTATION OF LEASE PAYMENTS (10% ROI)
GUARANTEED OR UNGUARANTEED RESIDUAL VALUE
 ANNUITY-DUE BASIS, INCLUDING RESIDUAL VALUE

Fair value of leased asset to lessor	\$100,000.00
Less: Present value of residual value (\$5,000 × .62092, Table 6-2)	3,104.60
Amount to be recovered by lessor through lease payments	<u>\$ 96,895.40</u>
Five periodic lease payments (\$96,895.40 ÷ 4.16986, Table 6-5)	<u><u>\$ 23,237.09</u></u>

ILLUSTRATION 21-16

Lessor's Computation of Lease Payments

second example, the payments are less, because the present value of the residual value reduces Caterpillar's total recoverable amount from \$100,000 to \$96,895.40.

Lessee Accounting for Residual Value

Whether the estimated residual value is guaranteed or unguaranteed has both economic and accounting consequence to the lessee. We saw the economic consequence—lower lease payments—in the preceding example. The accounting consequence is that the **minimum lease payments**, the basis for capitalization, include the guaranteed residual value but exclude the unguaranteed residual value.

Guaranteed Residual Value (Lessee Accounting). A guaranteed residual value affects the lessee's computation of minimum lease payments. Therefore, it also affects the amounts capitalized as a leased asset and a lease obligation. In effect, the guaranteed residual value **is an additional lease payment that the lessee will pay in property or cash, or both, at the end of the lease term.**

Using the rental payments as computed by the lessor in Illustration 21-16, the minimum lease payments are \$121,185.45 ($[\$23,237.09 \times 5] + \$5,000$). Illustration 21-17 shows the capitalized present value of the minimum lease payments (excluding executory costs) for Sterling Construction.

Lessee's capitalized amount	<u><u>\$100,000.00</u></u>

ILLUSTRATION 21-17

Computation of Lessee's Capitalized Amount—
Guaranteed Residual Value

Sterling prepares a schedule of interest expense and amortization of the \$100,000 lease liability. That schedule, shown in Illustration 21-18 (page 1218), is based on a \$5,000 final guaranteed residual value payment at the end of five years.

Sterling records the leased asset (front-end loader) and liability, depreciation, interest, property tax, and lease payments on the basis of a guaranteed residual value. (These journal entries are shown in Illustration 21-23, on page 1220.) The format of these entries is the same as illustrated earlier, although the amounts are different because of the guaranteed residual value. Sterling records the loader at \$100,000 and depreciates it over five years. To compute depreciation, it subtracts the guaranteed residual value from the cost of the loader. Assuming that Sterling uses the straight-line method, the depreciation expense each year is \$19,000 ($[\$100,000 - \$5,000] \div 5$ years).

12/31/21	5,000.00*		454.76**	4,545.24	–0–
	<u>\$131,185.45</u>	<u>\$10,000</u>	<u>\$21,185.45</u>	<u>\$100,000.00</u>	
(a) Annual lease payment as required by lease. (b) Executory costs included in rental payment. (c) Preceding balance of (e) × 10%, except 1/1/17. (d) (a) minus (b) and (c). (e) Preceding balance minus (d).			*Represents the guaranteed residual value. **Rounded by 24 cents.		

At the end of the lease term, before the lessee transfers the asset to Caterpillar, the lease asset and liability accounts have the following balances.

ILLUSTRATION 21-19

Account Balances on
Lessee's Books at End of
Lease Term—Guaranteed
Residual Value

Leased equipment (under capital leases)	\$100,000.00	Interest payable	\$ 454.76
Less: Accumulated depreciation— capital leases	95,000.00	Lease liability	4,545.24
	<u>\$ 5,000.00</u>		<u>\$5,000.00</u>

If at the end of the lease the fair value of the residual value is less than \$5,000, Sterling will have to record a loss. Assume that Sterling depreciated the leased asset down to its residual value of \$5,000 but that the fair value of the residual value at December 31, 2021, was \$3,000. In this case, Sterling would have to report a loss of \$2,000. Assuming that it pays cash to make up the residual value deficiency, Sterling would make the following journal entry.

Loss on Capital Lease	2,000.00	
Interest Expense (or Interest Payable)	454.76	
Lease Liability	4,545.24	
Accumulated Depreciation—Capital Leases	95,000.00	
Leased Equipment (under capital leases)		100,000.00
Cash		2,000.00

If the fair value *exceeds* \$5,000, a gain may be recognized. Caterpillar and Sterling may apportion gains on guaranteed residual values in whatever ratio the parties initially agree.

When there is a guaranteed residual value, the lessee must be careful not to depreciate the total cost of the asset. For example, if Sterling mistakenly depreciated the total cost of the loader (\$100,000), a misstatement would occur. That is, the carrying amount of the asset at the end of the lease term would be zero, but Sterling would show the liability under the capital lease at \$5,000. In that case, if the asset was worth \$5,000, Sterling would end up reporting a gain of \$5,000 when it transferred the asset back to Caterpillar. As a result, Sterling would overstate depreciation and would understate net income in 2017–2020; in the last year (2021) net income would be overstated.

Unguaranteed Residual Value (Lessee Accounting). From the lessee's viewpoint, an **unguaranteed residual value** is the same as no residual value in terms of its effect upon the lessee's method of computing the minimum lease payments and the capitalization of the leased asset and the lease liability.

Assume the same facts as those above except that the \$5,000 residual value is **unguaranteed** instead of guaranteed. The amount of the annual lease payments would be the same—\$23,237.09. Whether the residual value is guaranteed or unguaranteed, Caterpillar will recover the same amount through lease rentals—that is, \$96,895.40. The minimum lease payments are \$116,185.45 ($\$23,237.09 \times 5$). Sterling would capitalize the amount shown in Illustration 21-20.

STERLING'S CAPITALIZED AMOUNT (10% RATE)	
ANNUITY-DUE BASIS, INCLUDING UNGUARANTEED RESIDUAL VALUE	
Present value of 5 annual rental payments of \$23,237.09 \times 4.16986 (Table 6-5)	\$96,895.40
Unguaranteed residual value of \$5,000 (not capitalized by lessee)	-0-
Lessee's capitalized amount	<u>\$96,895.40</u>

ILLUSTRATION 21-20

Computation of Lessee's Capitalized Amount—Unguaranteed Residual Value

Illustration 21-21 shows Sterling's schedule of interest expense and amortization of the lease liability of \$96,895.40, assuming an unguaranteed residual value of \$5,000 at the end of five years.

STERLING CONSTRUCTION

 (b) Executory costs included in rental payment.
 (c) Preceding balance of (e) \times 10%.
 (d) (a) minus (b) and (c).
 (e) Preceding balance minus (d).
 *Rounded by 19 cents.

ILLUSTRATION 21-21

Lease Amortization Schedule for Lessee—Unguaranteed Residual Value

Sterling records the leased asset and liability, depreciation, interest, property tax, and lease payments on the basis of an unguaranteed residual value. (These journal entries are shown in Illustration 21-23 on page 1220.) The format of these capital lease entries is the same as illustrated earlier. Note that Sterling records the leased asset at \$96,895.40 and depreciates it over five years. Assuming that it uses the straight-line method, the depreciation expense each year is \$19,379.08 ($\$96,895.40 \div 5$ years). At the end of the lease term, before Sterling transfers the asset to Caterpillar, the lease asset and liability accounts have the following balances.

ILLUSTRATION 21-22

Account Balances on Lessee's Books at End of Lease Term—Unguaranteed Residual Value

Leased equipment (under capital leases)	\$96,895	Lease liability	<u>\$-0-</u>
Less: Accumulated depreciation—capital leases	<u>96,895</u>		
	<u>\$ -0-</u>		

Assuming that Sterling has fully depreciated the leased asset and has fully amortized the lease liability, no entry is required at the end of the lease term, except to remove the asset from the books.

If Sterling depreciated the asset down to its unguaranteed residual value, a misstatement would occur. That is, the carrying amount of the leased asset would be \$5,000 at the end of the lease, but the liability under the capital lease would be stated at zero before the transfer of the asset. Thus, Sterling would end up reporting a loss of \$5,000 when it transferred the asset back to Caterpillar. Sterling would understate depreciation and would overstate net income in 2017–2020; in the last year (2021), net income would be understated because of the recorded loss.

ILLUSTRATION 21-23

Comparative Entries for Guaranteed and Unguaranteed Residual Values, Lessee Company

Lessee Entries Involving Residual Values. Illustration 21-23 shows, in comparative form, Sterling's entries for both a guaranteed and an unguaranteed residual value.

<u>Guaranteed Residual Value</u>		<u>Unguaranteed Residual Value</u>	
Capitalization of lease (January 1, 2017):			
Leased Equipment (under capital leases)	100,000.00	Leased Equipment (under capital leases)	96,895.40

Interest Expense (or Interest Payable)	7,676.29	Interest Expense (or Interest Payable)	7,365.83
Cash	25,237.09	Cash	25,237.09

Lessor Accounting for Residual Value

As we indicated earlier, the lessor will recover the same net investment whether the residual value is guaranteed or unguaranteed. That is, the lessor works on the assumption that it will realize **the residual value at the end of the lease term whether guaranteed or unguaranteed**. The lease payments required in order for the company to earn a

certain return on investment are the same (e.g., \$23,237.09 in our example) whether the residual value is guaranteed or unguaranteed.

To illustrate, we again use the Caterpillar/Sterling data and assume classification of the lease as a direct-financing lease. With a residual value (either guaranteed or unguaranteed) of \$5,000, Caterpillar determines the payments as shown in Illustration 21-24.

Fair value of leased equipment	\$100,000.00
Less: Present value of residual value (\$5,000 × .62092, Table 6-2)	3,104.60
Amount to be recovered by lessor through lease payments	<u>\$ 96,895.40</u>
Five beginning-of-the-year lease payments to yield a 10% return (\$96,895.40 ÷ 4.16986, Table 6-5)	<u>\$ 23,237.09</u>

ILLUSTRATION 21-24
Computation of Direct-Financing Lease Payments

The amortization schedule is the same for guaranteed or unguaranteed residual value, as Illustration 21-25 shows.

ILLUSTRATION 21-25
Lease Amortization Schedule, for Lessor—Guaranteed or Unguaranteed Residual Value

Using the amounts computed above, Caterpillar would make the following entries for this direct-financing lease in the first year. Note the similarity to Sterling's entries in Illustration 21-23 for the guaranteed residual value situation.

Inception of lease (January 1, 2017):		
Lease Receivable	100,000.00	
Equipment		100,000.00
First payment received (January 1, 2017):		
Cash	25,237.09	
Lease Receivable		23,237.09
Property Tax Expense/Property Taxes Payable		2,000.00
Adjusting entry for accrued interest (December 31, 2017):		
Interest Receivable	7,676.29	
Interest Revenue		7,676.29

ILLUSTRATION 21-26
Entries for Either Guaranteed or Unguaranteed Residual Value, Lessor Company

WHAT DO THE NUMBERS MEAN?

RESIDUAL VALUE REGRET

As you have learned, residual value profits are an important driver for the popularity of leasing for lessors, especially for leases of equipment and vehicles. However, the profitability of equipment leasing hinges on the lessors' ability to accurately estimate the residual value of the leased asset at the end of the lease so as to resell the asset at a profit when returned by the lessee. However, **General Motors (GM)** has learned that residual value profits are not guaranteed. Here is what happened.

GM took advantage of a government subsidy for electric vehicles of \$7,500 to help drive down the cost of a lease for its electric car, the Chevy Volt. The taxpayer subsidies along with other GM incentives provided for low monthly lease payments, given the estimated residual value, and led to a full two-thirds of all Volt "sales" being attributed to leases. That's about three

times the lease rate for the overall industry. The problems for GM started when the Volts came back at the end of the lease. Unfortunately for GM and other electric car enthusiasts, demand for electric cars without the incentives (which expired) has not been sustained, and resale values for Volts have plummeted.

As a result, rather than reaping residual value profits, GM sustained losses for the Volt lease returns that sold for less than the original expected residual values. It's a double whammy for GM as the already low sales numbers for new Volts will be further hurt by the supply of low-priced Volts on the used car lot. Although it appears that GM made a bad bet on residual value profits on the Volt, there may be beneficiaries as those looking for a good deal on a Volt now have a supply of low-priced, used models to choose from.

Source: M. Modica, "Chevy Volt Resale Values Plunge as Lease Returns Hit Market," <http://nlpc.org/stories/2014/08/07/chevy-volt-resale-values-plunge-lease-returns-hit-market>.

Sales-Type Leases (Lessor)

As already indicated, the primary difference between a direct-financing lease and a **sales-type lease** is the manufacturer's or dealer's gross profit (or loss). The diagram in Illustration 21-27 presents the distinctions between direct-financing and sales-type leases.

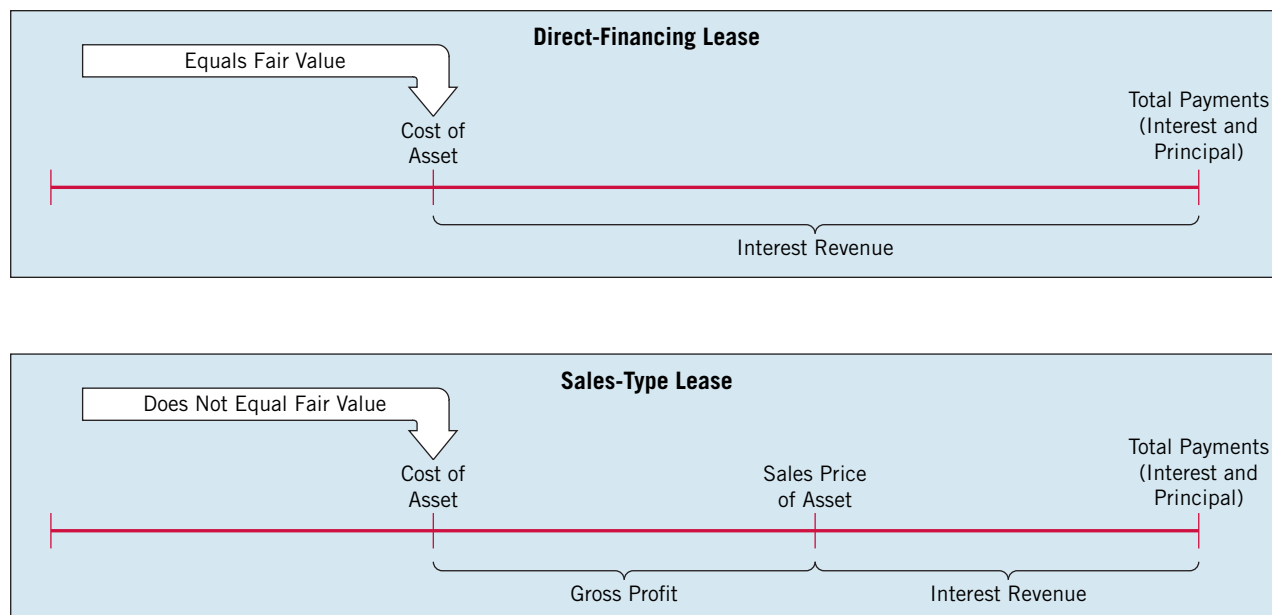

ILLUSTRATION 21-27

Direct-Financing versus Sales-Type Leases

In a sales-type lease, the lessor records the sales price of the asset, the cost of goods sold and related inventory reduction, and the lease receivable. The information necessary to record the sales-type lease is as follows.

SALES-TYPE LEASE TERMS

LEASE RECEIVABLE (also referred to as **NET INVESTMENT**). The present value of the minimum lease payments plus the present value of any unguaranteed residual value. The lease receivable therefore includes the present value of the residual value, whether guaranteed or not.

SALES PRICE OF THE ASSET. The present value of the minimum lease payments.

COST OF GOODS SOLD. The cost of the asset to the lessor, less the present value of any unguaranteed residual value.

When recording sales revenue and cost of goods sold, there is a difference in the accounting for guaranteed and unguaranteed residual values. The guaranteed residual value can be considered part of sales revenue because the lessor knows that the entire asset has been sold. But there is less certainty that the unguaranteed residual portion of the asset has been “sold” (i.e., will be realized). Therefore, the lessor recognizes sales and cost of goods sold only for the portion of the asset for which realization is assured. However, **the gross profit amount on the sale of the asset is the same whether a guaranteed or unguaranteed residual value is involved.**

To illustrate a sales-type lease with a guaranteed residual value and with an unguaranteed residual value, assume the same facts as in the preceding direct-financing lease situation (pages 1212–1215). The estimated residual value is \$5,000 (the present value of which is \$3,104.60), and the leased equipment has an \$85,000 cost to the dealer, Caterpillar. Assume that the fair value of the residual value is \$3,000 at the end of the lease term.

Illustration 21-28 shows computation of the amounts relevant to a sales-type lease.

	Sales-Type Lease	
	Guaranteed Residual Value	Unguaranteed Residual Value
Lease receivable	\$100,000 [\$23,237.09 × 4.16986 (Table 6-5) + \$5,000 × .62092 (Table 6-2)]	Same
Sales price of the asset	\$100,000	\$96,895.40 (\$100,000 – \$3,104.60)
Cost of goods sold	\$85,000	\$81,895.40 (\$85,000 – \$3,104.60)
Gross profit	\$15,000 (\$100,000 – \$85,000)	\$15,000 (\$96,895.40 – \$81,895.40)

ILLUSTRATION 21-28

Computation of Lease Amounts by Caterpillar Financial—Sales-Type Lease

Caterpillar records the same profit (\$15,000) at the point of sale whether the residual value is guaranteed or unguaranteed. The difference between the two is that **the sales revenue and cost of goods sold amounts are different.**

In making this computation, we deduct the present value of the unguaranteed residual value from sales revenue and cost of goods sold for two reasons. (1) The criteria for revenue recognition have not been met. (2) It is improper to record an expense against revenue not yet recognized. The revenue recognition criteria have not been met **because of the uncertainty surrounding the realization of the unguaranteed residual value.**

Caterpillar makes the following entries to record this transaction on January 1, 2017, and the receipt of the residual value at the end of the lease term.

<u>Guaranteed Residual Value</u>			<u>Unguaranteed Residual Value</u>		
To record sales-type lease at inception (January 1, 2017):					
Cost of Goods Sold	85,000.00		Cost of Goods Sold	81,895.40	
Lease Receivable	100,000.00		Lease Receivable	100,000.00	
Sales Revenue		100,000.00	Sales Revenue		96,895.40
Inventory		85,000.00	Inventory		85,000.00
To record receipt of the first lease payment (January 1, 2017):					
Cash	25,237.09		Cash	25,237.09	
Lease Receivable		23,237.09	Lease Receivable		23,237.09
Property Tax Exp./Pay.		2,000.00	Property Tax Exp./Pay.		2,000.00
To recognize interest revenue during the first year (December 31, 2017):					
Interest Receivable	7,676.29		Interest Receivable	7,676.29	
Interest Revenue		7,676.29	Interest Revenue		7,676.29
(see lease amortization schedule, Illustration 21-25 on page 1221)					
To record receipt of the second lease payment (January 1, 2018):					
Cash	25,237.09		Cash	25,237.09	
Interest Receivable		7,676.29	Interest Receivable		7,676.29
Lease Receivable		15,560.80	Lease Receivable		15,560.80
Property Tax Exp./Pay.		2,000.00	Property Tax Exp./Pay.		2,000.00
To recognize interest revenue during the second year (December 31, 2018):					
Interest Receivable	6,120.21		Interest Receivable	6,120.21	
Interest Revenue		6,120.21	Interest Revenue		6,120.21
To record receipt of residual value at end of lease term (December 31, 2021):					
Inventory	3,000		Inventory	3,000	
Cash	2,000		Loss on Capital Lease	2,000	
Lease Receivable		5,000	Lease Receivable		5,000

ILLUSTRATION 21-29

Entries for Guaranteed and Unguaranteed Residual Values, Lessor Company—Sales-Type Lease

Companies must periodically review the **estimated unguaranteed residual value in a sales-type lease**. If the estimate of the unguaranteed residual value declines, the company must revise the accounting for the transaction using the changed estimate. The decline represents a reduction in the lessor's lease receivable (net investment). The lessor recognizes the decline as a loss in the period in which it reduces the residual estimate. Companies do not recognize upward adjustments in estimated residual value.

WHAT DO THE NUMBERS MEAN?**XEROX TAKES ON THE SEC**

Xerox derives much of its income from leasing equipment. Reporting such leases as sales leases, Xerox records a lease contract as a sale, thereby recognizing income immediately. One problem is that each lease receipt consists of payments for items such as supplies, services, financing, and equipment.

The SEC *accused* Xerox of inappropriately allocating lease receipts, which affects the timing of income that it reports. If Xerox applied SEC guidelines, it would report income in different time periods. Xerox contended that its methods were correct. It also noted that when the lease term is up, the bottom

line is the same using either the SEC's recommended allocation method or its current method.

Although Xerox can refuse to change its method, the SEC has the right to prevent a company from selling stock or bonds to the public if the agency rejects financial filings of the company.

Apparently, being able to access public markets is very valuable to Xerox. The company agreed to change its accounting according to SEC wishes, and Xerox paid \$670 million to settle a shareholder lawsuit related to its lease transactions. Its former auditor, **KPMG LLP**, paid \$80 million.

Sources: Adapted from "Xerox Takes on the SEC," *Accounting Web* (January 9, 2002), www.accountingweb.com; and K. Shwiff and M. Maremont, "Xerox, KPMG Settle Shareholder Lawsuit," *Wall Street Journal Online* (March 28, 2008), p. B3.

Bargain-Purchase Option (Lessee)

As stated earlier, a bargain-purchase option allows the lessee to purchase the leased property for a future price that is substantially lower than the property's expected future fair value. The price is so favorable at the lease's inception that the future exercise of the option appears to be reasonably assured. If a bargain-purchase option exists, **the lessee must increase the present value of the minimum lease payments by the present value of the option price.**

For example, assume that Sterling Construction (see Illustration 21-18 on page 1218) had an option to buy the leased equipment for \$5,000 at the end of the five-year lease term. At that point, Sterling and Caterpillar expect the fair value to be \$18,000. The significant difference between the option price and the fair value creates a bargain-purchase option, and the exercise of that option is reasonably assured.

A bargain-purchase option affects the accounting for leases in essentially the same way as a guaranteed residual value. In other words, with a guaranteed residual value, the lessee must pay the residual value at the end of the lease. Similarly, a purchase option that is a bargain will almost certainly be paid by the lessee. Therefore, the computations, amortization schedule, and entries that would be prepared for this \$5,000 bargain-purchase option are identical to those shown for the \$5,000 guaranteed residual value (see Illustrations 21-16, 21-17, and 21-18 on pages 1217 and 1218).

The only difference between the accounting treatment for a bargain-purchase option and a guaranteed residual value of identical amounts and circumstances is in the **computation of the annual depreciation**. In the case of a guaranteed residual value, Sterling depreciates the asset over the lease term. In the case of a bargain-purchase option, it uses the **economic life** of the asset.

Initial Direct Costs (Lessor)

Initial direct costs are of two types: incremental and internal. **[8] Incremental direct costs** are paid to independent third parties for originating a lease arrangement. Examples include the cost of independent appraisal of collateral used to secure a lease, the cost of an outside credit check of the lessee, or a broker's fee for finding the lessee.

Internal direct costs are directly related to specified activities performed **by the lessor** on a given lease. Examples are evaluating the prospective lessee's financial condition; evaluating and recording guarantees, collateral, and other security arrangements; negotiating lease terms and preparing and processing lease documents; and closing the transaction. The costs directly related to an employee's time spent on a specific lease transaction are also considered initial direct costs.

However, initial direct costs should **not** include **internal indirect costs**. Such costs are related to activities the lessor performs for advertising, servicing existing leases, and establishing and monitoring credit policies. Nor should the lessor include the costs for supervision and administration or for expenses such as rent and depreciation.

The accounting for initial direct costs depends on the type of lease:

- For **operating leases**, the lessor should defer initial direct costs and **allocate them over the lease term** in proportion to the recognition of rental revenue.
- For **sales-type leases**, the lessor expenses the initial direct costs **in the period** in which it recognizes the profit on the sale.
- For a **direct-financing lease**, the lessor adds initial direct costs to the net investment in the lease and **amortizes them over the life of the lease as a yield adjustment**.

In a direct-financing lease, the lessor must disclose the unamortized deferred initial direct costs that are part of its investment in the direct-financing lease. For example, if the carrying value of the asset in the lease is \$4,000,000 and the lessor incurs initial direct costs of \$35,000, then the lease receivable (net investment in the lease) would be \$4,035,000. The yield would be lower than the initial rate of return, and the lessor would adjust the yield to ensure proper amortization of the amount over the life of the lease.

Current versus Noncurrent

Earlier in the chapter, we presented the classification of the lease liability/receivable in an annuity-due situation. Illustration 21-7 (on page 1206) indicated that Sterling's current liability is the payment of \$23,981.62 (excluding \$2,000 of executory costs) to be made on January 1 of the next year. Similarly, as shown in Illustration 21-15 (on page 1214), Caterpillar's current asset is the \$23,981.62 (excluding \$2,000 of executory costs) it will collect on January 1 of the next year. In these annuity-due instances, the balance sheet date is December 31 and the due date of the lease payment is January 1 (less than one year), so the present value (\$23,981.62) of the payment due the following January 1 is the same as the rental payment (\$23,981.62).

What happens if the situation is an ordinary annuity rather than an annuity due? For example, assume that the rent is due at the **end of the year** (December 31) rather than at the beginning (January 1). GAAP does not indicate how to measure the current and noncurrent amounts. It requires that for the lessee the "obligations shall be separately identified on the balance sheet as obligations under capital leases and shall be subject to the same considerations as other obligations in classifying them with current and noncurrent liabilities in classified balance sheets." **[9] The most common method of measuring the current liability portion in ordinary annuity leases is the change-in-the-present-value method.**¹⁴

To illustrate the change-in-the-present-value method, assume an ordinary-annuity situation with the same facts as the Caterpillar/Sterling case, excluding the \$2,000 of executory costs. Because Sterling pays the rents at the end of the period instead of at the beginning, Caterpillar sets the five rents at \$26,379.73, to have an effective-interest rate of 10 percent. Illustration 21-30 shows the ordinary-annuity amortization schedule.

ILLUSTRATION 21-30

Lease Amortization
Schedule—Ordinary-
Annuity Basis

STERLING/CATERPILLAR LEASE AMORTIZATION SCHEDULE ORDINARY-ANNUITY BASIS				
Date	Annual Lease Payment	Interest 10%	Reduction of Lease Liability/Receivable	Balance of Lease Liability/Receivable
1/1/17				\$100,000.00
12/31/17	\$ 26,379.73	\$10,000.00	\$ 16,379.73	83,620.27
12/31/18	26,379.73	8,362.03	18,017.70	65,602.57
12/31/19	26,379.73	6,560.26	19,819.47	45,783.10
12/31/20	26,379.73	4,578.31	21,801.42	23,981.68
12/31/21	26,379.73	2,398.05*	23,981.68	-0-
	<u>\$131,898.65</u>	<u>\$31,898.65</u>	<u>\$100,000.00</u>	

*Rounded by 12 cents.

The current portion of the lease liability/receivable under the **change-in-the-present-value method** as of December 31, 2017, would be \$18,017.70 (\$83,620.27 - \$65,602.57). At December 31, 2017, Caterpillar classifies \$65,602.57 of the receivable as noncurrent. As of December 31, 2018, the current portion would be \$19,819.47 (\$65,602.57 - \$45,783.10).

Thus, both the annuity-due and the ordinary-annuity situations report the reduction of principal for the next period as a current liability/current asset. In the annuity-due situation, Caterpillar accrues interest during the year but is not paid until the next period. As a result, **a current asset arises for the receivable reduction and for the interest** that was recognized in the preceding period.

In the ordinary-annuity situation, the interest accrued during the period is also paid in the same period. Consequently, the lessor shows as a current asset only the principal reduction.

¹⁴For additional discussion on this approach and possible alternatives, see R. J. Swieringa, "When Current Is Noncurrent and Vice Versa!" *The Accounting Review* (January 1984), pp. 123-30; and A. W. Richardson, "The Measurement of the Current Portion of the Long-Term Lease Obligations—Some Evidence from Practice," *The Accounting Review* (October 1985), pp. 744-52.

Disclosing Lease Data

The FASB requires **lessees** and **lessors** to disclose certain information about leases in their financial statements or in the notes. These requirements vary based upon the type of lease (capital or operating) and whether the issuer is the lessor or lessee. These disclosure requirements provide investors with the following information.

- General description of the nature of leasing arrangements.
- The nature, timing, and amount of cash inflows and outflows associated with leases, including payments to be paid or received for each of the five succeeding years.
- The amount of lease revenues and expenses reported in the income statement each period.
- Description and amounts of leased assets by major balance sheet classification and related liabilities.
- Amounts receivable and unearned revenues under lease agreements. [10]

Illustration 21-31 presents financial statement excerpts from the annual report of **Wal-Mart Stores, Inc.** dated January 31, 2015. These excerpts represent the statement and note disclosures typical of a lessee having both capital leases and operating leases.

Jan. 31, 2014

Current Liabilities

Obligations under capital leases
due within one year

\$ 287

\$ 309

Noncurrent Liabilities

Long-term obligations under capital leases

\$2,606

\$2,788

Note 12: Commitments

The Company has long-term leases for stores and equipment. Rentals (including amounts applicable to taxes, insurance, maintenance, other operating expenses and contingent rentals) under operating leases and other short-term rental arrangements were \$2.8 billion in both fiscal 2015 and 2014. Aggregate minimum annual rentals at January 31, 2015, under non-cancelable leases are as follows (dollar amounts in millions):

	Operating Leases	Capital Leases
2016	\$1,759	\$ 504
2017	1,615	476
2018	1,482	444
2019	1,354	408
2020	1,236	370
Thereafter	10,464	3,252
Total minimum rentals	17,910	\$5,454
Less estimated executory costs		49
Net minimum lease payments		\$5,405
Less imputed interest		2,512
Present value of minimum lease payments		\$2,893

Certain of the Company's leases provide for the payment of contingent rentals based on a percentage of sales. Such contingent rentals were immaterial for fiscal 2015 and 2014. Substantially all of the Company's store leases have renewal options, some of which may trigger an escalation in rentals. The Company has future lease commitments for land and buildings for approximately 282 future locations. These lease commitments have lease terms ranging from 1 to 30 years and provide for certain minimum rentals. If executed, payments under operating leases would increase by \$58 million for fiscal 2016, based on current cost estimates.

**Hewlett-Packard Company****Notes to Financial Statements**

(in millions)

Note 11: Financing Receivables and Operating Leases

Financing receivables represent sales-type and direct-financing leases resulting from the marketing of HP's and third-party products. These receivables typically have terms from two to five years and are usually collateralized by a security interest in the underlying assets. Financing receivables also include billed receivables from operating leases. The components of net financing receivables, which are included in financing receivables and long-term financing receivables and other assets, were as follows for the following fiscal years ended October 31:

	2014	2013
Minimum lease payments receivable	\$6,982	\$7,505
Allowance for doubtful accounts	(111)	(131)
Unguaranteed residual value	235	252
Unearned income	(547)	(604)
Financing receivables, net	6,559	7,022
Less current portion	(2,946)	(3,144)
Amounts due after one year, net	<u>\$3,613</u>	<u>\$3,878</u>

As of October 31, 2014, scheduled maturities of HP's minimum lease payments receivable were as follows for the following fiscal years ended October 31:

	2015	2016	2017	2018	2019	Thereafter	Total
Scheduled maturities of minimum lease payments receivable	\$3,220	\$1,959	\$1,112	\$483	\$174	\$34	\$6,982

Equipment leased to customers under operating leases was \$4.0 billion at October 31, 2014 and \$3.8 billion at October 31, 2013 and is included in machinery and equipment. Accumulated depreciation on equipment under lease was \$1.4 billion at October 31, 2014 and \$1.5 billion at October 31, 2013. As of October 31, 2014, minimum future rentals on non-cancelable operating leases related to leased equipment were as follows for the following fiscal years ended October 31:

	2015	2016	2017	2018	2019	Thereafter	Total
Minimum future rentals on non-cancelable operating leases	\$1,487	\$958	\$467	\$156	\$50	\$6	\$3,124

Unresolved Lease Accounting Problems

As we indicated at the beginning of this chapter, lease accounting is subject to abuse. Companies make strenuous efforts to circumvent GAAP in this area. In practice, the strong desires of lessees to resist capitalization have rendered the accounting rules for capitalizing leases partially ineffective. Leasing generally involves large dollar amounts that, when capitalized, materially increase reported liabilities and adversely affect the debt to equity ratio. Lessees also resist lease capitalization because charges to expense made in the early years of the lease term are higher under the capital lease method than under the operating method, frequently without tax benefit. As a consequence, "let's beat the lease standard" is one of the most popular games in town.¹⁵

To avoid leased asset capitalization, companies design, write, and interpret lease agreements to prevent satisfying any of the four capitalized lease criteria. Companies

¹⁵Richard Dieter, "Is Lessee Accounting Working?" *CPA Journal* (August 1979), pp. 13–19. This article provides interesting examples of abuses of GAAP in this area, discusses the circumstances that led to the current situation, and proposes a solution.

can easily devise lease agreements in such a way, by meeting the following specifications.

1. Ensure that the lease does not specify the transfer of title of the property to the lessee.
2. Do not write in a bargain-purchase option.
3. Set the lease term at something less than 75 percent of the estimated economic life of the leased property.
4. Arrange for the present value of the minimum lease payments to be less than 90 percent of the fair value of the leased property.

The real challenge lies in disqualifying the lease as a capital lease to the lessee, while having the same lease qualify as a capital (sales or financing) lease to the lessor. Unlike lessees, lessors try to avoid having lease arrangements classified as operating leases.¹⁶

Avoiding the first three criteria is relatively simple, but it takes a little ingenuity to avoid the “90 percent recovery test” for the lessee while satisfying it for the lessor. Two of the factors involved in this effort are (1) the use of the incremental borrowing rate by the lessee when it is higher than the implicit interest rate of the lessor, by making information about the implicit rate unavailable to the lessee, and (2) residual value guarantees.

The lessee’s use of the higher interest rate is probably the more popular subterfuge. Lessees are knowledgeable about the fair value of the leased property and, of course, the rental payments. However, they generally are unaware of the estimated residual value used by the lessor. Therefore, the lessee who does not know exactly the lessor’s implicit interest rate might use a different (higher) incremental borrowing rate.

The residual value guarantee is the other unique, yet popular, device used by lessees and lessors. In fact, a whole new industry has emerged to circumvent symmetry between the lessee and the lessor in accounting for leases. The residual value guarantee has spawned numerous companies whose principal, or even sole, function is to guarantee the residual value of leased assets.

Because the minimum lease payments include the guaranteed residual value for the lessor, this satisfies the 90 percent recovery of the fair value test. The lease is a nonoperating lease to the lessor. **But because a third-party guarantees the residual value, the minimum lease payments of the lessee exclude the guarantee.** Thus, by merely transferring some of the risk to a third party, lessees can alter substantially the accounting treatment by converting what would otherwise be capital leases to operating leases.¹⁷

The nature of the criteria encourages much of this circumvention, stemming from weaknesses in the basic objective of the lease accounting guidelines. Accounting rule-makers continue to have poor experience with arbitrary break points or other size and percentage criteria—such as rules like “90 percent of” and “75 percent of.” Some believe that a more workable solution is to require capitalization of all leases that have noncancelable payment terms in excess of one year. Under this approach, the lessee acquires an asset (a property right) and a corresponding liability, rather than on the basis that the lease transfers substantially all the risks and rewards of ownership.

¹⁶The reason is that most lessors are banks, which are not permitted to hold these assets on their balance sheets except for relatively short periods of time. Furthermore, the capital lease transaction from the lessor’s standpoint provides higher income flows in the earlier periods of the lease life.

¹⁷As an aside, third-party guarantors have experienced some difficulty. **Lloyd’s of London**, at one time, insured the fast-growing U.S. computer leasing industry in the amount of \$2 billion against revenue losses, and losses in residual value, for canceled leases. Because of “overnight” technological improvements and the successive introductions of more efficient and less expensive computers, lessees in abundance canceled their leases. As the market for secondhand computers became flooded, residual values plummeted, and third-party guarantor Lloyd’s of London projected a loss of \$400 million. The lessees’ and lessors’ desire to circumvent GAAP stimulated much of the third-party guarantee business.

YOU WILL WANT TO READ THE IFRS INSIGHTS ON PAGES 1256–1265

For discussion of IFRS related to lease accounting.

EVOLVING ISSUE

LEASE ACCOUNTING—IF IT QUACKS LIKE A DUCK

As you have learned in this chapter, existing lease accounting rules are criticized for failing to meet the needs of financial statement users because relevant information about rights and obligations that meet the definitions of assets and liabilities are omitted from the balance sheet. In response to these criticisms of lease accounting, the FASB and IASB have worked to develop a new approach to lease accounting. The FASB plans to issue a new standard on lease accounting in 2016. Here are the main elements of the new rules.

New Lease Accounting Rules

Under the new rules, all leases with terms longer than one year will result in assets and liabilities being recognized on the balance sheet. Once recognized, lessees will use a dual approach, with lease classification determined in accordance with the principle in existing GAAP. That is, a lessee must determine whether a lease is effectively an installment purchase—a “Type A” lease—which is similar to existing capital/finance leases. “Type B” leases are those for which transfer of ownership of the asset is not conveyed through the lease (generally analogous to existing operating leases). For both types of leases, **lessees will recognize a liability to make lease payments and a right-of-use (ROU) asset, both measured at the present value of the lease payments.**

Subsequent accounting for Type A leases requires amortization of the ROU asset separately from interest on the lease liability (similar to the current GAAP for capital leases). For Type B leases, the income effects will reflect a straight-line expense pattern, reported as a single total lease expense. This is similar to the current accounting for operating lease expense.

For lessors, the Board decided that a lessor should determine lease classification (Type A versus Type B) on the basis of whether the lease is effectively a financing or a sale, rather than an operating lease. This approach is the same as the concept underlying existing GAAP (and IFRS). Lessors are precluded from recognizing selling profit and revenue at lease commencement for any Type A lease that does not transfer control of the underlying asset to the lessee. As a result, the lessor accounting for sales-type leases aligns with the requirements in the Boards’ recent converged standards on revenue, in which revenue is recognized from the customer’s perspective, based on transfer of control. Thus, lessor accounting for sales-type and direct-financing leases will be based on an approach substantially equivalent to existing GAAP.

Implications

The proposed “right-of-use” model shows promise to result in reporting more relevant and representationally faithful

information about leasing arrangements. As summarized in the following table (and in the Evolving Issue box on page 1209), an analysis at the time of the original exposure draft of the potential impact of the proposed leasing rules indicated significant effects.

A quick look at the current leasing market and some possible effects of the proposed rules:

- **\$600 billion.** Annual volume of leased equipment.
- **70%.** Volume of real estate leases as a percentage of all leases held by U.S. public companies.
- **\$1.3 trillion.** Amount of operating lease payments that U.S. public companies will bring back on-balance-sheet as capital leases under the proposed rule.
- **7%.** Potential first-year average increase in lease expense for a 3-year lease.
- **21%.** Potential first-year average increase in lease expense for a 10-year lease.

Sources: Equipment Leasing and Finance Association, 2009; PricewaterhouseCoopers and Rotterdam School of Management, 2009.

As indicated, over \$1.3 trillion of operating leases will come on-balance-sheet if the rules are adopted (more recent estimates indicate an increase of \$2 trillion). In addition, there was expected to be a significant negative impact on lessee income statements in the early years of leases. However, the FASB responded to constituent concerns about the front-loading of lease expense for Type B leases and revised the model to allow different expense recognition for operating (Type B) leases. Compared to earlier estimated income declines of 7–10 percent, analysis of the revised model indicates just a 4 percent decline in income.

At the same time, an analysis of the new rules and how they might impact the advantages of leasing presented in the table on the next page suggests that many of the advantages of leases will remain after implementation of the new rules.

Accounting standard-setters have resolved to address lease accounting deficiencies. As the chairperson of the IASB remarked, “. . . a financing, in the form of a loan to purchase an asset, then it would be recorded. Call it a lease and miraculously it does not show up in your books. In my book, if it looks like a duck, swims like a duck, and quacks like a duck, then it probably is a duck. So is the case with debt—leasing or otherwise.” We hope that the new accounting rules will be implemented so that financial statements provide relevant and representationally faithful information about leasing arrangements.

Reason for Leasing	Details	Status After Proposed New Rules Implemented
Funding source	Additional capital source, 100% financing, fixed rate, level payments, longer terms.	Still a major benefit versus a purchase—money loan financing, fixed rate, level payments—especially for smaller companies with limited sources of capital.
Low-cost capital	Low payments/rate due to tax benefits, residual and lessor's comparatively low cost of funds.	Still a benefit versus a loan.
Tax benefits	Lessee cannot use tax benefits and lease versus buy shows lease option offers lowest after tax cost.	Still a benefit.
Manage need for assets/ residual risk transfer	Lessee has flexibility to return asset.	Still a benefit.
Convenience	Quick and convenient financing process often available at point-of-sale.	Still a benefit.
Regulatory	Can help in meeting capital requirements.	Still a partial benefit if the capitalized amount is less than the cost of the asset as it is in many leases due to residuals assumed and tax benefits.
Accounting	Asset and liability off-balance-sheet.	Still a partial benefit if the capitalized amount is less than the cost of the asset as it is in many leases due to residuals assumed and tax benefits.

APPENDIX 21A

SALE-LEASEBACKS

The term **sale-leaseback** describes a transaction in which the owner of the property (seller-lessee) sells the property to another and simultaneously leases it back from the new owner. The use of the property is generally continued without interruption.

Sale-leasebacks are common. Financial institutions (e.g., **Bank of America** and **First Chicago**) have used this technique for their administrative offices, public utilities (**Ohio Edison** and **Pinnacle West Corporation**) for their generating plants, and airlines (**Continental** and **Alaska Airlines**) for their aircraft. The advantages of a sale-leaseback from the seller's viewpoint usually involve two primary considerations:

- 1. Financing.** If the purchase of equipment has already been financed, a sale-leaseback can allow the seller to refinance at lower rates, assuming rates have dropped. In addition, a sale-leaseback can provide another source of working capital, particularly when liquidity is tight.
- 2. Taxes.** At the time a company purchased equipment, it may not have known that it would be subject to an alternative minimum tax and that ownership might increase its minimum tax liability. By selling the property, the seller-lessee may deduct the entire lease payment, which is not subject to alternative minimum tax considerations.

LEARNING OBJECTIVE *5

Describe the lessee's accounting for sale-leaseback transactions.

DETERMINING ASSET USE

To the extent the **seller-lessee continues to use** the asset after the sale, the sale-leaseback is really a form of financing. Therefore, the lessor **should not recognize a gain or loss** on the transaction. In short, the seller-lessee is simply borrowing funds.

UNDERLYING CONCEPTS

A sale-leaseback is similar in substance to the parking of inventories (discussed in Chapter 8). The ultimate economic benefits remain under the control of the “seller,” thus satisfying the definition of an asset.

On the other hand, if the **seller-lessee gives up the right to the use** of the asset, the transaction is in substance a sale. In that case, **gain or loss recognition** is appropriate. Trying to ascertain when the lessee has given up the use of the asset is difficult, however, and the FASB has formulated complex rules to identify this situation.¹⁸ To understand the profession’s position in this area, we discuss the basic accounting for the lessee and lessor below.

Lessee

If the lease meets one of the four criteria for treatment as a capital lease (see Illustration 21-3 on page 1201), the **seller-lessee accounts for the transaction as a sale and the lease as a capital lease**. The seller-lessee should defer any profit or loss it experiences from the sale of the assets that are leased back under a capital lease; it should **amortize that profit over the lease term** (or the economic life if either criterion 1 or 2 is satisfied) in proportion to the amortization of the leased assets.

For example, assume **Scott Paper** sells equipment having a book value of \$580,000 and a fair value of \$623,110 to **General Electric Credit** for \$623,110 and leases the equipment back for \$50,000 a year for 20 years. Scott should amortize the profit of \$43,110 over the 20-year period at the same rate that it depreciates the \$623,110. **[12]** It credits the \$43,110 ($\$623,110 - \$580,000$) to **Unearned Profit on Sale-Leaseback**.

If none of the capital lease criteria are satisfied, the **seller-lessee accounts for the transaction as a sale and the lease as an operating lease**. Under an operating lease, the lessee defers such profit or loss and amortizes it in proportion to the rental payments over the period when it expects to use the assets.

There are exceptions to these two general rules. They are:

1. **Losses recognized.** When the fair value of the asset is **less than the book value** (carrying amount), the lessee must recognize a loss immediately, up to the amount of the difference between the book value and fair value. For example, if Lessee, Inc. sells equipment having a book value of \$650,000 and a fair value of \$623,110, it should charge the difference of \$26,890 to a loss account.¹⁹
2. **Minor leaseback.** Leasebacks in which the present value of the rental payments are 10 percent or less of the fair value of the asset are **minor leasebacks**. In this case, the seller-lessee gives up most of the rights to the use of the asset sold. Therefore, the transaction is a sale, and full gain or loss recognition is appropriate. It is not a financing transaction because the risks of ownership have been transferred.²⁰

Lessor

If the lease meets one of the criteria in Group I and both of the criteria in Group II (see Illustration 21-10 on page 1211), the **purchaser-lessor** records the transaction as a purchase and a direct-financing lease. If the lease does not meet the criteria, the purchaser-lessor records the transaction as a purchase and an operating lease.

SALE-LEASEBACK EXAMPLE

To illustrate the accounting treatment accorded a sale-leaseback transaction, assume that **American Airlines** on January 1, 2017, sells a used Boeing 757 having a carrying

¹⁸Sales and leasebacks of real estate are often accounted for differently. A discussion of the issues related to these transactions is beyond the scope of this textbook. **[11]**

¹⁹There can be two types of losses in sale-leaseback arrangements. One is a real economic loss that results when the carrying amount of the asset is higher than the fair value of the asset. In this case, the loss should be recognized. An artificial loss results when the sales price is below the carrying amount of the asset but the fair value is above the carrying amount. In this case, the loss is more in the form of prepaid rent, and the lessee should defer the loss and amortize it in the future.

²⁰In some cases, the seller-lessee retains more than a minor part but less than substantially all. The computations to arrive at these values are complex and beyond the scope of this textbook.

amount on its books of \$75,500,000 to **CitiCapital** for \$80,000,000. American immediately leases the aircraft back under the following conditions:

1. The term of the lease is 15 years, noncancelable, and requires equal rental payments of \$10,487,443 at the beginning of each year.
2. The aircraft has a fair value of \$80,000,000 on January 1, 2017, and an estimated economic life of 15 years.
3. American pays all executory costs.
4. American depreciates similar aircraft that it owns on a straight-line basis over 15 years.
5. The annual payments assure the lessor a 12 percent return.
6. American's incremental borrowing rate is 12 percent.

This lease is a capital lease to American because the lease term exceeds 75 percent of the estimated life of the aircraft and because the present value of the lease payments exceeds 90 percent of the fair value of the aircraft to CitiCapital. Assuming that collectibility of the lease payments is reasonably predictable and that no important uncertainties exist in relation to unreimbursable costs yet to be incurred by CitiCapital, it should classify this lease as a direct-financing lease.

Illustration 21A-1 presents the typical journal entries to record the sale-leaseback transactions for American and CitiCapital for the first year.

ILLUSTRATION 21A-1
Comparative Entries for
Sale-Leaseback for Lessee
and Lessor

American Airlines (Lessee)			CitiCapital (Lessor)		
Sale of aircraft by American to CitiCapital (January 1, 2017):					
Cash	80,000,000		Aircraft	80,000,000	
Aircraft		75,500,000	Cash		80,000,000
Unearned Profit on Sale-Leaseback		4,500,000			
Leased Aircraft (under capital leases)	80,000,000		Lease Receivable	80,000,000	
Lease Liability		80,000,000	Aircraft		80,000,000
First lease payment (January 1, 2017):					
Lease Liability	10,487,443		Cash	10,487,443	
Cash		10,487,443	Lease Receivable		10,487,443
Incurrence and payment of executory costs by American throughout 2017:					
Insurance, Maintenance, Taxes, etc.	XXX				(No entry)
Cash or Accounts Payable		XXX			
Depreciation expense on the aircraft (December 31, 2017):					
Depreciation Expense	5,333,333				(No entry)
Accumulated Depr.—Capital Leases (\$80,000,000 ÷ 15)		5,333,333			
Amortization of profit on sale-leaseback by American (December 31, 2017):					
Unearned Profit on Sale-Leaseback	300,000				(No entry)
Depreciation Expense (\$4,500,000 ÷ 15)		300,000			
<i>(Note: A case might be made for crediting Sales Revenue instead of Depreciation Expense.)</i>					
Interest for 2017 (December 31, 2017):					
Interest Expense	8,341,507 ^a		Interest Receivable	8,341,507	
Interest Payable		8,341,507	Interest Revenue		8,341,507 ^a
^a Partial Lease Amortization Schedule:					
	Date	Annual Rental Payment	Interest 12%	Reduction of Balance	Balance
	1/1/17				\$80,000,000
	1/1/17	\$10,487,443	\$ —	\$10,487,443	69,512,557
	1/1/18	10,487,443	8,341,507	2,145,936	67,366,621

LEARNING OBJECTIVES REVIEW

1 Explain the nature, economic substance, and advantages of lease transactions. A lease is a contractual agreement between a lessor and a lessee that conveys to the lessee the right to use specific property (real or personal), owned by the lessor, for a specified period of time. In return, the lessee periodically pays cash (rent) to the lessor. The advantages of lease transactions are (1) 100 percent financing, (2) protection against obsolescence, (3) flexibility, (4) less costly financing, (5) possible tax advantages, and (6) off-balance-sheet financing.

2 Describe the accounting for leases by lessees. A lease is a capital lease if it meets one or more of the following criteria. (1) The lease transfers ownership of the property to the lessee. (2) The lease contains a bargain-purchase option. (3) The lease term is equal to 75 percent or more of the estimated economic life of the leased property. (4) The present value of the minimum lease payments (excluding executory costs) equals or exceeds 90 percent of the fair value of the leased property. For a capital lease, the lessee records an asset and a liability at the lower of (1) the present value of the minimum lease payments, or (2) the fair value of the leased asset at the inception of the lease.

Distinction between the operating and capitalization methods of recording leases. The total charges to operations are the same over the lease term whether accounting for the lease as a capital lease or as an operating lease. Under the capital lease treatment, the charges are higher in the earlier years and lower in the later years. If using an accelerated method of depreciation, the differences between the amounts charged to operations under the two methods would be even larger in the earlier and later years. If using a capital lease instead of an operating lease, the following occurs: (1) an increase in the amount of reported debt (both short-term and long-term), (2) an increase in the amount of total assets (specifically long-lived assets), and (3) lower income early in the life of the lease and, therefore, lower retained earnings.

3 Describe the accounting for leases by lessors. Three important benefits available to the lessor are (1) interest revenue, (2) tax incentives, and (3) residual value profits. Lessors are essentially renting or selling assets, and in many cases are providing financing for the purchase of the asset. The lessor determines the amount of the rental, basing it on the rate of return—the implicit rate—needed to justify leasing the asset, taking into account the credit standing of the lessee, the length of the lease, and the status of the residual value (guaranteed versus unguaranteed).

Classifications of leases for the lessor. A lessor may classify leases for accounting purposes as follows: (1) operating leases, (2) direct-financing leases, and (3) sales-type leases. The lessor should classify and account for an arrangement as a direct-financing lease or a sales-type lease if, at the date of the lease agreement, the lease meets one or more of the Group I criteria (as shown in Learning Objective 2 for lessees) and *both* of the following Group II criteria: (1) collectibility of the payments required from the lessee is reasonably predictable, and (2) no important uncertainties surround the amount of unreimbursable costs yet to be incurred by the lessor under the lease. The lessor classifies and accounts for all leases that fail to meet the criteria as operating leases.

Lessor's accounting for direct-financing leases. Leases that are in substance the financing of an asset purchase by a lessee require the lessor to substitute a "lease receivable" for the leased asset. "Lease receivable" is the present value of the

minimum lease payments plus the present value of the unguaranteed residual value. Therefore, lessors include the residual value, whether guaranteed or unguaranteed, as part of the lease receivable.

4 Describe the accounting and reporting for special features of lease arrangements. The features of lease arrangements that cause unique accounting problems are (1) residual values, (2) sales-type leases (lessor), (3) bargain-purchase options, (4) initial direct costs, (5) current versus noncurrent, and (6) disclosures.

The effect of residual values, guaranteed and unguaranteed, on lease accounting. Whether the estimated residual value is guaranteed or unguaranteed is of both economic and accounting consequence to the lessee. The accounting consequence is that the minimum lease payments, the basis for capitalization, include the guaranteed residual value but exclude the unguaranteed residual value. A guaranteed residual value affects the lessee's computation of minimum lease payments and the amounts capitalized as a leased asset and a lease obligation. In effect, the guaranteed residual value is an additional lease payment that the lessee will pay in property or cash, or both, at the end of the lease term. An unguaranteed residual value from the lessee's viewpoint is the same as no residual value in terms of its effect upon the lessee's method of computing the minimum lease payments and the capitalization of the leased asset and the lease liability.

Lessor's accounting for sales-type leases. A sales-type lease recognizes interest revenue like a direct-financing lease. It also recognizes a manufacturer's or dealer's profit. In a sales-type lease, the lessor records at the inception of the lease the sales price of the asset, the cost of goods sold and related inventory reduction, and the lease receivable. Sales-type leases differ from direct-financing leases in terms of the cost and fair value of the leased asset, which results in gross profit. The lease receivable and interest revenue are the same whether a guaranteed or an unguaranteed residual value is involved. The accounting for guaranteed and for unguaranteed residual values requires recording sales revenue and cost of goods sold differently. The guaranteed residual value can be considered part of sales revenue because the lessor knows that the entire asset has been sold. There is less certainty that the unguaranteed residual portion of the asset has been "sold." Therefore, lessors recognize sales and cost of goods sold only for the portion of the asset for which realization is assured. However, the gross profit amount on the sale of the asset is the same whether a guaranteed or unguaranteed residual value is involved.

Disclosure requirements for leases. The disclosure requirements for the lessees and lessors vary based upon the type of lease (capital or operating) and whether the issuer is the lessor or lessee. These disclosure requirements provide investors with the following information: (1) general description of the nature of leasing arrangements; (2) the nature, timing, and amount of cash inflows and outflows associated with leases, including payments to be paid or received for each of the five succeeding years; (3) the amount of lease revenues and expenses reported in the income statement each period; (4) description and amounts of leased assets by major balance sheet classification and related liabilities; and (5) amounts receivable and unearned revenues under lease agreements.

***5 Describe the lessee's accounting for sale-leaseback transactions.** If the lease meets one of the four criteria for treatment as a capital lease, the seller-lessee accounts for the transaction as a sale and the lease as a capital lease. The seller-lessee defers any profit it experiences from the sale of the assets that are leased back under a capital lease. The seller-lessee amortizes any profit over the lease term (or the economic life if either criterion 1 or 2 is satisfied) in proportion to the amortization of the leased assets. If the lease satisfies none of the capital lease criteria, the seller-lessee accounts for the transaction as a sale and the lease as an operating lease. Under an operating lease, the lessee defers such profit and amortizes it in proportion to the rental payments over the period of time that it expects to use the assets.

ENHANCED REVIEW AND PRACTICE

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

PRACTICE PROBLEM

Morgan Bakeries is involved in four different lease situations. Each of these leases is noncancelable, and in no case does Morgan receive title to the properties leased during or at the end of the lease term. All leases start on January 1, 2017, with the first rental due at the beginning of the year. Additional information is shown in the table on the next page.

1236 Chapter 21 Accounting for Leases

	(a) <u>Harmon, Inc.</u>	(b) <u>Arden's Oven Co.</u>	(c) <u>Mendota Truck Co.</u>	(d) <u>Appleland Computer</u>
Type of property	Cabinets	Oven	Truck	Computer
Yearly rental	\$6,000	\$15,000	\$5,582.62	\$3,557.25
Lease term	20 years	10 years	3 years	3 years
Estimated economic life	30 years	25 years	7 years	5 years
Purchase option	None	\$75,000 at end of 10 years \$4,000 at end of 15 years	None	\$3,000 at end of 3 years, which approximates fair value
Renewal option	None	5-year renewal option at \$15,000 per year	None	1 year at \$1,500; no penalty for nonrenewal; standard renewal clause
Fair value at inception of lease	\$60,000	\$120,000	\$20,000	\$10,000
Cost of asset to lessor	\$60,000	\$120,000	\$15,000	\$10,000
Residual value				
Guaranteed	–0–	–0–	\$7,000	–0–
Unguaranteed	\$5,000	–0–	–0–	\$3,000
Incremental borrowing rate of lessee	12%	12%	12%	12%
Executory costs paid by	<i>Lessee</i> \$300 per year	<i>Lessee</i> \$1,000 per year	<i>Lessee</i> \$500 per year	<i>Lessor</i> Estimated to be \$500 per year, included in lease payment
Present value of minimum lease payments				
Using incremental borrowing rate of lessee	\$50,194.68	\$115,153.35	\$20,000	\$8,224.16
Using implicit rate of lessor	Not known	Not known	Not known	Known by lessee, \$8,027.48
Estimated fair value at end of lease	\$5,000	\$80,000 at end of 10 years \$60,000 at end of 15 years	Not available	\$3,000

Instructions

For each lease arrangement, determine the correct classification of the lease and prepare the journal entry at its inception.

SOLUTION

(a) Analysis of the Harmon, Inc. lease:

- Transfer of title?** No.
- Bargain-purchase option?** No.
- Economic life test (75% test).** The lease term is 20 years and the estimated economic life is 30 years. Thus, it **does not** meet the 75 percent test.
- Recovery of investment test (90% test):**

Fair value	\$60,000	Rental payments	\$ 6,000
Rate	× 90%	PV of annuity due for	
90% of fair value	<u>\$54,000</u>	20 years at 12%	× 8.36578
		PV of rental payments	<u>\$50,194.68</u>

Because the present value of the minimum lease payments is less than 90 percent of the fair value, the lease does not meet the 90 percent test.

Both Morgan and Harmon should account for this lease as an operating lease, as indicated by the following January 1, 2017, entries.

Morgan Bakeries (Lessee)		Harmon, Inc. (Lessor)	
Rent Expense	6,000	Cash	6,000
Cash	6,000	Rent Revenue	6,000

(b) Analysis of the Arden's Oven Co. lease:

- Transfer of title?** No.
- Bargain-purchase option?** The \$75,000 option at the end of 10 years does not appear to be sufficiently lower than the expected fair value of \$80,000 to make it reasonably assured that it will be exercised. However, the \$4,000 at the end of 15 years when the fair value is \$60,000 does appear to be a bargain. From the information given, criterion 2 is therefore met. Note that both the guaranteed and the unguaranteed residual values are assigned zero values because the lessor does not expect to repossess the leased asset.
- Economic life test (75% test):** Given that a bargain-purchase option exists, the lease term is the initial lease period of 10 years plus the five-year renewal option since it precedes a bargain-purchase option. Even though the lease term is now considered to be 15 years, this test is still not met because 75 percent of the economic life of 25 years is 18.75 years.
- Recovery of investment test (90% test):**

Fair value	\$120,000	Rental payments	\$ 15,000.00
Rate	× 90%	PV of annuity due for	
90% of fair value	<u>\$108,000</u>	15 years at 12%	× 7.62817
		PV of rental payments	<u>\$114,422.55</u>

$$\text{PV of bargain-purchase option} = \$4,000 \times (\text{PVF}_{15,12\%}) = \$4,000 \times .18270 = \$730.80$$

PV of rental payments	\$114,422.55
PV of bargain-purchase option	730.80
PV of minimum lease payments	<u>\$115,153.35</u>

The present value of the minimum lease payments is greater than 90 percent of the fair value. Therefore, the lease does meet the 90 percent test.

Morgan Bakeries should account for this as a capital lease because the lease meets both criteria 2 and 4. Assuming that Arden's implicit rate is less than Morgan's incremental borrowing rate, the following entries are made on January 1, 2017.

Morgan Bakeries (Lessee)		Arden's Oven Co. (Lessor)	
Leased Equipment (oven)	115,153.35	Lease Receivable	120,000
Lease Liability	115,153.35	Equipment (oven)	120,000

Morgan Bakeries would depreciate the leased asset over its economic life of 25 years, given the bargain-purchase option. Arden's Oven Co. does not use sales-type accounting because the fair value and the cost of the asset are the same at the inception of the lease.

(c) Analysis of the Mendota Truck Co. lease:

- Transfer of title?** No.
- Bargain-purchase option?** No.
- Economic life test (75% test):** The lease term is three years and the estimated economic life is seven years. Thus, it **does not** meet the 75 percent test.

4. Recovery of investment test (90% test):

Fair value	\$20,000	Rental payments	\$ 5,582.62
Rate	× 90%	PV of annuity due for	
90% of fair value	<u>\$18,000</u>	3 years at 12%	× 2.69005
		PV of rental payments	<u>\$15,017.54*</u>

*Adjusted for \$0.01 due to rounding.

PV of guaranteed residual value: = $\$7,000 \times (PVF_{3,12\%}) = \$7,000 \times .71178 = \$4,982.46$

PV of rental payments	\$15,017.54
PV of guaranteed residual value	<u>4,982.46</u>
PV of minimum lease payments	<u>\$20,000.00</u>

The present value of the minimum lease payments is greater than 90 percent of the fair value. Therefore, the lease meets the 90 percent test.

Assuming that Mendota's implicit rate is the same as Morgan's incremental borrowing rate, the following entries are made on January 1, 2017.

Morgan Bakeries (Lessee)		Mendota Truck Co. (Lessor)	
Leased Equipment (truck)	20,000	Lease Receivable	20,000
Lease Liability	20,000	Cost of Goods Sold	15,000
		Trucks	15,000
		Sales Revenue	20,000

Because the cost of the truck is less than the fair value, this is a sales-type lease for Mendota. Morgan depreciates the leased asset over three years to its guaranteed residual value.

(d) Analysis of the Appleland Computer lease:

- 1. Transfer of title?** No.
- 2. Bargain-purchase option?** No. The option to purchase at the end of three years at approximate fair value is clearly not a bargain.
- 3. Economic life test (75% test):** The lease term is three years, and no bargain-renewal period exists. Therefore, the 75 percent test is **not** met.
- 4. Recovery of investment test (90% test):**

Fair value	\$10,000	Rental payments	\$3,557.25
Rate	× 90%	Less executory costs	<u>500.00</u>
90% of fair value	<u>\$ 9,000</u>		3,057.25
		PV of annuity-due factor	
		for 3 years at 12%	× 2.69005
		PV of minimum lease payments	
		using incremental borrowing rate	<u>\$8,224.16</u>

The present value of the minimum lease payments using the incremental borrowing rate is \$8,224.16. Using the implicit rate, it is \$8,027.48. The lessor's implicit rate is therefore higher than the incremental borrowing rate. Given this situation, the lessee uses the \$8,224.16 (lower interest rate when discounting) when comparing with the 90 percent of fair value. Because the present value of the minimum lease payments is lower than 90 percent of the fair value, the lease does **not** meet the recovery of investment test.

The following entries are made on January 1, 2017, indicating an operating lease.

Morgan Bakeries (Lessee)		Appleland Computer (Lessor)	
Rent Expense	3,557.25	Cash	3,557.25
Cash	3,557.25	Rent Revenue	3,557.25

If the lease payments had been \$3,557.25 with no executory costs involved, this lease arrangement would have qualified for capital-lease accounting treatment.

WileyPLUS

Brief Exercises, Exercises, Problems, Problem Solution Walkthrough Videos, and many more learning and assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

(Unless instructed otherwise, round all amounts to the nearest dollar.)

QUESTIONS

1. What are the major lessor groups in the United States? What advantage does a captive have in a leasing arrangement?
2. Bradley Co. is expanding its operations and is in the process of selecting the method of financing this program. After some investigation, the company determines that it may (1) issue bonds and with the proceeds purchase the needed assets or (2) lease the assets on a long-term basis. Without knowing the comparative costs involved, answer these questions:
 - (a) What might be the advantages of leasing the assets instead of owning them?
 - (b) What might be the disadvantages of leasing the assets instead of owning them?
 - (c) In what way will the balance sheet be differently affected by leasing the assets as opposed to issuing bonds and purchasing the assets?
3. Identify the two recognized lease accounting methods for lessees and distinguish between them.
4. Ballard Company rents a warehouse on a month-to-month basis for the storage of its excess inventory. The company periodically must rent space whenever its production greatly exceeds actual sales. For several years, the company officials have discussed building their own storage facility, but this enthusiasm wavers when sales increase sufficiently to absorb the excess inventory. What is the nature of this type of lease arrangement, and what accounting treatment should be accorded it?
5. Distinguish between minimum rental payments and minimum lease payments, and indicate what is included in minimum lease payments.
6. Explain the distinction between a direct-financing lease and a sales-type lease for a lessor.
7. Outline the accounting procedures involved in applying the operating method by a lessee.
8. Outline the accounting procedures involved in applying the capital lease method by a lessee.
9. Identify the lease classifications for lessors and the criteria that must be met for each classification.
10. Outline the accounting procedures involved in applying the direct-financing method.
11. Outline the accounting procedures involved in applying the operating method by a lessor.
12. Walker Company is a manufacturer and lessor of computer equipment. What should be the nature of its lease arrangements with lessees if the company wishes to account for its lease transactions as sales-type leases?
13. Metheny Corporation's lease arrangements qualify as sales-type leases at the time of entering into the transactions. How should the corporation recognize revenues and costs in these situations?
14. Alice Foyle, M.D. (lessee), has a noncancelable 20-year lease with Brownback Realty, Inc. (lessor) for the use of a medical building. Taxes, insurance, and maintenance are paid by the lessee in addition to the fixed annual payments, of which the present value is equal to the fair value of the leased property. At the end of the lease period, title becomes the lessee's at a nominal price. Considering the terms of the lease described above, comment on the nature of the lease transaction and the accounting treatment that should be accorded it by the lessee.
15. The residual value is the estimated fair value of the leased property at the end of the lease term.
 - (a) Of what significance is (1) an unguaranteed and (2) a guaranteed residual value in the lessee's accounting for a capitalized-lease transaction?
 - (b) Of what significance is (1) an unguaranteed and (2) a guaranteed residual value in the lessor's accounting for a direct-financing lease transaction?
16. How should changes in the estimated unguaranteed residual value be handled by the lessor?
17. Describe the effect of a "bargain-purchase option" on accounting for a capital lease transaction by a lessee.
18. What are "initial direct costs" and how are they accounted for?
19. What disclosures should be made by lessees and lessors related to future lease payments?
- *20. What is the nature of a "sale-leaseback" transaction?

BRIEF EXERCISES

BE21-1 (L02) Callaway Golf Co. leases telecommunications equipment. Assume the following data for equipment leased from Photon Company. The lease term is 5 years and requires equal rental payments of \$31,000 at the beginning of each year. The equipment has a fair value at the inception of the lease of \$138,000, an estimated useful life of 8 years, and no residual value.

1240 Chapter 21 Accounting for Leases

Callaway pays all executory costs directly to third parties. Photon set the annual rental to earn a rate of return of 10%, and this fact is known to Callaway. The lease does not transfer title or contain a bargain-purchase option. How should Callaway classify this lease?

BE21-2 (L02) Waterworld Company leased equipment from Costner Company. The lease term is 4 years and requires equal rental payments of \$43,019 at the beginning of each year. The equipment has a fair value at the inception of the lease of \$150,000, an estimated useful life of 4 years, and no salvage value. Waterworld pays all executory costs directly to third parties. The appropriate interest rate is 10%. Prepare Waterworld's January 1, 2017, journal entries at the inception of the lease.

BE21-3 (L02) Rick Kleckner Corporation recorded a capital lease at \$300,000 on January 1, 2017. The interest rate is 12%. Kleckner Corporation made the first lease payment of \$53,920 on January 1, 2017. The lease requires eight annual payments. The equipment has a useful life of 8 years with no salvage value. Prepare Kleckner Corporation's December 31, 2017, adjusting entries.

BE21-4 (L02) Use the information for Rick Kleckner Corporation from BE21-3. Assume that at December 31, 2017, Kleckner made an adjusting entry to accrue interest expense of \$29,530 on the lease. Prepare Kleckner's January 1, 2018, journal entry to record the second lease payment of \$53,920.

BE21-5 (L02) Jana Kingston Corporation enters into a lease on January 1, 2017, that does not transfer ownership or contain a bargain-purchase option. It covers 3 years of the equipment's 8-year useful life, and the present value of the minimum lease payments is less than 90% of the fair value of the asset leased. Prepare Jana Kingston's journal entry to record its January 1, 2017, annual lease payment of \$35,000.

BE21-6 (L03) Assume that IBM leased equipment that was carried at a cost of \$150,000 to Sharon Swander Company. The term of the lease is 6 years beginning January 1, 2017, with equal rental payments of \$30,044 at the beginning of each year. All executory costs are paid by Swander directly to third parties. The fair value of the equipment at the inception of the lease is \$150,000. The equipment has a useful life of 6 years with no salvage value. The lease has an implicit interest rate of 8%, no bargain-purchase option, and no transfer of title. Collectibility is reasonably assured with no additional cost to be incurred by IBM. Prepare IBM's January 1, 2017, journal entries at the inception of the lease.

BE21-7 (L03) Use the information for IBM from BE21-6. Assume the direct-financing lease was recorded at a present value of \$150,000. Prepare IBM's December 31, 2017, entry to record interest.

BE21-8 (L03) Jennifer Brent Corporation owns equipment that cost \$80,000 and has a useful life of 8 years with no salvage value. On January 1, 2017, Jennifer Brent leases the equipment to Donna Havaci Inc. for 1 year with one rental payment of \$15,000 on January 1. Prepare Jennifer Brent Corporation's 2017 journal entries.

BE21-9 (L04) Indiana Jones Corporation enters into a 6-year lease of equipment on January 1, 2017, which requires 6 annual payments of \$40,000 each, beginning January 1, 2017. In addition, Indiana Jones guarantees the lessor a residual value of \$20,000 at lease-end. The equipment has a useful life of 6 years. Prepare Indiana Jones' January 1, 2017, journal entries assuming an interest rate of 10%.

BE21-10 (L04) Use the information for Indiana Jones Corporation from BE21-9. Assume that for Lost Ark Company, the lessor, collectibility is reasonably predictable, there are no important uncertainties concerning costs, and the carrying amount of the equipment is \$202,921. Prepare Lost Ark's January 1, 2017, journal entries.

BE21-11 (L04) Geiberger Corporation manufactures replicators. On January 1, 2017, it leased to Althaus Company a replicator that had cost \$110,000 to manufacture. The lease agreement covers the 5-year useful life of the replicator and requires 5 equal annual rentals of \$40,800 payable each January 1, beginning January 1, 2017. An interest rate of 12% is implicit in the lease agreement. Collectibility of the rentals is reasonably assured, and there are no important uncertainties concerning costs. Prepare Geiberger's January 1, 2017, journal entries.

***BE21-12 (L05)** On January 1, 2017, Irwin Animation sold a truck to Peete Finance for \$33,000 and immediately leased it back. The truck was carried on Irwin's books at \$28,000. The term of the lease is 5 years, and title transfers to Irwin at lease-end. The lease requires five equal rental payments of \$8,705 at the end of each year. The appropriate rate of interest is 10%, and the truck has a useful life of 5 years with no salvage value. Prepare Irwin's 2017 journal entries.

EXERCISES

E21-1 (L02) (Lessee Entries; Capital Lease with Unguaranteed Residual Value) On January 1, 2017, Burke Corporation signed a 5-year noncancelable lease for a machine. The terms of the lease called for Burke to make annual payments of \$8,668 at the beginning of each year, starting January 1, 2017. The machine has an estimated useful life of 6 years and a \$5,000 unguaranteed residual value. The machine reverts back to the lessor at the end of the lease term. Burke uses the straight-line method of depreciation for all of its plant assets. Burke's incremental borrowing rate is 10%, and the lessor's implicit rate is unknown.

Instructions

- (a) What type of lease is this? Explain.
- (b) Compute the present value of the minimum lease payments.
- (c) Prepare all necessary journal entries for Burke for this lease through January 1, 2018.

E21-2 (L02) (Lessee Computations and Entries; Capital Lease with Guaranteed Residual Value) Pat Delaney Company leases an automobile with a fair value of \$8,725 from John Simon Motors, Inc., on the following terms:

1. Noncancelable term of 50 months.
2. Rental of \$200 per month (at end of each month). (The present value at 1% per month is \$7,840.)
3. Estimated residual value after 50 months is \$1,180. (The present value at 1% per month is \$715.) Delaney Company guarantees the residual value of \$1,180.
4. Estimated economic life of the automobile is 60 months.
5. Delaney Company's incremental borrowing rate is 12% a year (1% a month). Simon's implicit rate is unknown.

Instructions

- (a) What is the nature of this lease to Delaney Company?
- (b) What is the present value of the minimum lease payments?
- (c) Record the lease on Delaney Company's books at the date of inception.
- (d) Record the first month's depreciation on Delaney Company's books (assume straight-line).
- (e) Record the first month's lease payment.

E21-3 (L02,4) EXCEL (Lessee Entries; Capital Lease with Executory Costs and Unguaranteed Residual Value) Assume that on January 1, 2017, **Kimberly-Clark Corp.** signs a 10-year noncancelable lease agreement to lease a storage building from Sheffield Storage Company. The following information pertains to this lease agreement.

1. The agreement requires equal rental payments of \$72,000 beginning on January 1, 2017.
2. The fair value of the building on January 1, 2017, is \$440,000.
3. The building has an estimated economic life of 12 years, with an unguaranteed residual value of \$10,000. Kimberly-Clark depreciates similar buildings on the straight-line method.
4. The lease is nonrenewable. At the termination of the lease, the building reverts to the lessor.
5. Kimberly-Clark's incremental borrowing rate is 12% per year. The lessor's implicit rate is not known by Kimberly-Clark.
6. The yearly rental payment includes \$2,471 of executory costs related to taxes on the property.

Instructions

Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2017 and 2018. Kimberly-Clark's corporate year-end is December 31.

E21-4 (L03) (Lessor Entries; Direct-Financing Lease with Option to Purchase) Castle Leasing Company signs a lease agreement on January 1, 2017, to lease electronic equipment to Jan Way Company. The term of the noncancelable lease is 2 years, and payments are required at the end of each year. The following information relates to this agreement:

1. Jan Way Company has the option to purchase the equipment for \$16,000 upon termination of the lease.
2. The equipment has a cost and fair value of \$160,000 to Castle Leasing Company. The useful economic life is 2 years, with a salvage value of \$16,000.
3. Jan Way Company is required to pay \$5,000 each year to the lessor for executory costs.
4. Castle Leasing Company desires to earn a return of 10% on its investment.
5. Collectibility of the payments is reasonably predictable, and there are no important uncertainties surrounding the costs yet to be incurred by the lessor.

Instructions

- (a) Prepare the journal entries on the books of Castle Leasing to reflect the payments received under the lease and to recognize income for the years 2017 and 2018.
- (b) Assuming that Jan Way Company exercises its option to purchase the equipment on December 31, 2018, prepare the journal entry to reflect the sale on Castle's books.

E21-5 (L02,3) (Type of Lease; Amortization Schedule) Mike Macinski Leasing Company leases a new machine that has a cost and fair value of \$95,000 to Sharrer Corporation on a 3-year noncancelable contract. Sharrer Corporation agrees to assume all risks of normal ownership including such costs as insurance, taxes, and maintenance. The machine has a 3-year useful life and no residual value. The lease was signed on January 1, 2017. Mike Macinski Leasing Company expects to earn a 9% return on its investment. The annual rentals are payable on each December 31.

1242 Chapter 21 Accounting for Leases

Instructions

- Discuss the nature of the lease arrangement and the accounting method that each party to the lease should apply.
- Prepare an amortization schedule that would be suitable for both the lessor and the lessee and that covers all the years involved.

E21-6 (L04) EXCEL (Lessor Entries; Sales-Type Lease) Crosley Company, a machinery dealer, leased a machine to Dexter Corporation on January 1, 2017. The lease is for an 8-year period and requires equal annual payments of \$35,013 at the beginning of each year. The first payment is received on January 1, 2017. Crosley had purchased the machine during 2016 for \$160,000. Collectibility of lease payments is reasonably predictable, and no important uncertainties surround the amount of costs yet to be incurred by Crosley. Crosley set the annual rental to ensure an 11% rate of return. The machine has an economic life of 10 years with no residual value and reverts to Crosley at the termination of the lease.

Instructions

- Compute the amount of the lease receivable.
- Prepare all necessary journal entries for Crosley for 2017.

E21-7 (L04) (Lessee-Lessor Entries; Sales-Type Lease) On January 1, 2017, Bensen Company leased equipment to Flynn Corporation. The following information pertains to this lease.

- The term of the noncancelable lease is 6 years, with no renewal option. The equipment reverts to the lessor at the termination of the lease.
- Equal rental payments are due on January 1 of each year, beginning in 2017.
- The fair value of the equipment on January 1, 2017, is \$150,000, and its cost is \$120,000.
- The equipment has an economic life of 8 years, with an unguaranteed residual value of \$10,000. Flynn depreciates all of its equipment on a straight-line basis.
- Bensen set the annual rental to ensure an 11% rate of return. Flynn's incremental borrowing rate is 12%, and the implicit rate of the lessor is unknown.
- Collectibility of lease payments is reasonably predictable, and no important uncertainties surround the amount of costs yet to be incurred by the lessor.

Instructions

(Both the lessor and the lessee's accounting period ends on December 31.)

- Discuss the nature of this lease to Bensen and Flynn.
- Calculate the amount of the annual rental payment.
- Prepare all the necessary journal entries for Flynn for 2017.
- Prepare all the necessary journal entries for Bensen for 2017.

E21-8 (L04) (Lessee Entries with Bargain-Purchase Option) The following facts pertain to a noncancelable lease agreement between Mooney Leasing Company and Rode Company, a lessee.

Inception date	May 1, 2017
Annual lease payment due at the beginning of each year, beginning with May 1, 2017	\$21,227.65
Bargain-purchase option price at end of lease term	\$ 4,000.00
Lease term	5 years
Economic life of leased equipment	10 years
Lessor's cost	\$65,000.00
Fair value of asset at May 1, 2017	\$91,000.00
Lessor's implicit rate	10%
Lessee's incremental borrowing rate	10%

The collectibility of the lease payments is reasonably predictable, and there are no important uncertainties surrounding the costs yet to be incurred by the lessor. The lessee assumes responsibility for all executory costs.

Instructions

(Round all numbers to the nearest cent.)

- Discuss the nature of this lease to Rode Company.
- Discuss the nature of this lease to Mooney Leasing Company.
- Prepare a lease amortization schedule for Rode Company for the 5-year lease term.
- Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2017 and 2018. Rode's annual accounting period ends on December 31. Reversing entries are used by Rode.

E21-9 (L04) (Lessor Entries with Bargain-Purchase Option) A lease agreement between Mooney Leasing Company and Rode Company is described in E21-8.

Instructions

(Round all numbers to the nearest cent.)

Refer to the data in E21-8 and do the following for the lessor.

- Compute the amount of the lease receivable at the inception of the lease.
- Prepare a lease amortization schedule for Mooney Leasing Company for the 5-year lease term.
- Prepare the journal entries to reflect the signing of the lease agreement and to record the receipts and income related to this lease for the years 2017, 2018, and 2019. The lessor's accounting period ends on December 31. Reversing entries are not used by Mooney.

E21-10 (L03) (Computation of Rental; Journal Entries for Lessor) Morgan Leasing Company signs an agreement on January 1, 2017, to lease equipment to Cole Company. The following information relates to this agreement.

- The term of the noncancelable lease is 6 years with no renewal option. The equipment has an estimated economic life of 6 years.
- The cost of the asset to the lessor is \$245,000. The fair value of the asset at January 1, 2017, is \$245,000.
- The asset will revert to the lessor at the end of the lease term, at which time the asset is expected to have a residual value of \$43,622, none of which is guaranteed.
- Cole Company assumes direct responsibility for all executory costs.
- The agreement requires equal annual rental payments, beginning on January 1, 2017.
- Collectibility of the lease payments is reasonably predictable. There are no important uncertainties surrounding the amount of costs yet to be incurred by the lessor.

Instructions

(Round all numbers to the nearest cent.)

- Assuming the lessor desires a 10% rate of return on its investment, calculate the amount of the annual rental payment required. (Round to the nearest dollar.)
- Prepare an amortization schedule that would be suitable for the lessor for the lease term.
- Prepare all of the journal entries for the lessor for 2017 and 2018 to record the lease agreement, the receipt of lease payments, and the recognition of income. Assume the lessor's annual accounting period ends on December 31.

E21-11 (L02) (Amortization Schedule and Journal Entries for Lessee) Laura Leasing Company signs an agreement on January 1, 2017, to lease equipment to Plote Company. The following information relates to this agreement.

- The term of the noncancelable lease is 5 years with no renewal option. The equipment has an estimated economic life of 5 years.
- The fair value of the asset at January 1, 2017, is \$80,000.
- The asset will revert to the lessor at the end of the lease term, at which time the asset is expected to have a residual value of \$7,000, none of which is guaranteed.
- Plote Company assumes direct responsibility for all executory costs, which include the following annual amounts: (1) \$900 to Rocky Mountain Insurance Company for insurance and (2) \$1,600 to Laclede County for property taxes.
- The agreement requires equal annual rental payments of \$18,142.95 to the lessor, beginning on January 1, 2017.
- The lessee's incremental borrowing rate is 12%. The lessor's implicit rate is 10% and is known to the lessee.
- Plote Company uses the straight-line depreciation method for all equipment.
- Plote uses reversing entries when appropriate.

Instructions

(Round all numbers to the nearest cent.)

- Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- Prepare all of the journal entries for the lessee for 2017 and 2018 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31.

E21-12 (L02,3) (Accounting for an Operating Lease) On January 1, 2017, Doug Nelson Co. leased a building to Patrick Wise Inc. The relevant information related to the lease is as follows.

- The lease arrangement is for 10 years.
- The leased building cost \$4,500,000 and was purchased for cash on January 1, 2017.
- The building is depreciated on a straight-line basis. Its estimated economic life is 50 years with no salvage value.
- Lease payments are \$275,000 per year and are made at the end of the year.

1244 Chapter 21 Accounting for Leases

5. Property tax expense of \$85,000 and insurance expense of \$10,000 on the building were incurred by Nelson in the first year. Payment on these two items was made at the end of the year.
6. Both the lessor and the lessee are on a calendar-year basis.

Instructions

- (a) Prepare the journal entries that Nelson Co. should make in 2017.
- (b) Prepare the journal entries that Wise Inc. should make in 2017.
- (c) If Nelson paid \$30,000 to a real estate broker on January 1, 2017, as a fee for finding the lessee, how much should Nelson Co. report as an expense for this item in 2017?

E21-13 (L02,3) (Accounting for an Operating Lease) On January 1, 2017, a machine was purchased for \$900,000 by Young Co. The machine is expected to have an 8-year life with no salvage value. It is to be depreciated on a straight-line basis. The machine was leased to St. Leger Inc. on January 1, 2017, at an annual rental of \$210,000. Other relevant information is as follows.

1. The lease term is for 3 years.
2. Young Co. incurred maintenance and other executory costs of \$25,000 in 2017 related to this lease.
3. The machine could have been sold by Young Co. for \$940,000 instead of leasing it.
4. St. Leger is required to pay a rent security deposit of \$35,000 and to prepay the last month's rent of \$17,500.

Instructions

- (a) How much should Young Co. report as income before income tax on this lease for 2017?
- (b) What amount should St. Leger Inc. report for rent expense for 2017 on this lease?

E21-14 (L02,3) (Operating Lease for Lessee and Lessor) On February 20, 2017, Barbara Brent Inc. purchased a machine for \$1,500,000 for the purpose of leasing it. The machine is expected to have a 10-year life, no residual value, and will be depreciated on the straight-line basis. The machine was leased to Rudy Company on March 1, 2017, for a 4-year period at a monthly rental of \$19,500. There is no provision for the renewal of the lease or purchase of the machine by the lessee at the expiration of the lease term. Brent paid \$30,000 of commissions associated with negotiating the lease in February 2017.

Instructions

- (a) What expense should Rudy Company record as a result of the facts above for the year ended December 31, 2017? Show supporting computations in good form.
- (b) What income or loss before income taxes should Brent record as a result of the facts above for the year ended December 31, 2017? (*Hint: Amortize commissions over the life of the lease.*)

(AICPA adapted)

***E21-15 (L05) (Sale-Leaseback)** Assume that on January 1, 2017, **Elmer's Restaurants** sells a computer system to Liquidity Finance Co. for \$680,000 and immediately leases the computer system back. The relevant information is as follows.

1. The computer was carried on Elmer's books at a value of \$600,000.
2. The term of the noncancelable lease is 10 years; title will transfer to Elmer.
3. The lease agreement requires equal rental payments of \$110,666.81 at the end of each year.
4. The incremental borrowing rate for Elmer is 12%. Elmer is aware that Liquidity Finance Co. set the annual rental to ensure a rate of return of 10%.
5. The computer has a fair value of \$680,000 on January 1, 2017, and an estimated economic life of 10 years.
6. Elmer pays executory costs of \$9,000 per year.

Instructions

Prepare the journal entries for both the lessee and the lessor for 2017 to reflect the sale and leaseback agreement. No uncertainties exist, and collectibility is reasonably certain.

***E21-16 (L05) (Lessee-Lessor, Sale-Leaseback)** The following are four independent situations.

- (a) On December 31, 2017, Zarle Inc. sold computer equipment to Daniell Co. and immediately leased it back for 10 years. The sales price of the equipment was \$520,000, its carrying amount is \$400,000, and its estimated remaining economic life is 12 years. Determine the amount of deferred revenue to be reported from the sale of the computer equipment on December 31, 2017.
- (b) On December 31, 2017, Wasicsko Co. sold a machine to Cross Co. and simultaneously leased it back for one year. The sales price of the machine was \$480,000, the carrying amount is \$420,000, and it had an estimated remaining useful life of 14 years. The present value of the rental payments for the one year is \$35,000. At December 31, 2017, how much should Wasicsko report as deferred revenue from the sale of the machine?

- (c) On January 1, 2017, McKane Corp. sold an airplane with an estimated useful life of 10 years. At the same time, McKane leased back the plane for 10 years. The sales price of the airplane was \$500,000, the carrying amount \$379,000, and the annual rental \$73,975.22. McKane Corp. intends to depreciate the leased asset using the sum-of-the-years'-digits depreciation method. Discuss how the gain on the sale should be reported at the end of 2017 in the financial statements.
- (d) On January 1, 2017, Sondgeroth Co. sold equipment with an estimated useful life of 5 years. At the same time, Sondgeroth leased back the equipment for 2 years under a lease classified as an operating lease. The sales price (fair value) of the equipment was \$212,700, the carrying amount is \$300,000, the monthly rental under the lease is \$6,000, and the present value of the rental payments is \$115,753. For the year ended December 31, 2017, determine which items would be reported on its income statement for the sale-leaseback transaction.

PROBLEMS

P21-1 (L02,4) (Lessee-Lessor Entries, Sales-Type Lease) Glaus Leasing Company agrees to lease machinery to Jensen Corporation on January 1, 2017. The following information relates to the lease agreement.

1. The term of the lease is 7 years with no renewal option, and the machinery has an estimated economic life of 9 years.
2. The cost of the machinery is \$525,000, and the fair value of the asset on January 1, 2017, is \$700,000.
3. At the end of the lease term, the asset reverts to the lessor and has a guaranteed residual value of \$100,000. Jensen depreciates all of its equipment on a straight-line basis.
4. The lease agreement requires equal annual rental payments, beginning on January 1, 2017.
5. The collectibility of the lease payments is reasonably predictable, and there are no important uncertainties surrounding the amount of costs yet to be incurred by the lessor.
6. Glaus desires a 10% rate of return on its investments. Jensen's incremental borrowing rate is 11%, and the lessor's implicit rate is unknown.

Instructions

(Assume the accounting period ends on December 31.)

- (a) Discuss the nature of this lease for both the lessee and the lessor.
- (b) Calculate the amount of the annual rental payment required.
- (c) Compute the present value of the minimum lease payments.
- (d) Prepare the journal entries Jensen would make in 2017 and 2018 related to the lease arrangement.
- (e) Prepare the journal entries Glaus would make in 2017 and 2018.

P21-2 (L02,3) GROUPWORK (Lessee-Lessor Entries, Operating Lease) Cleveland Inc. leased a new crane to Abriendo Construction under a 5-year noncancelable contract starting January 1, 2017. Terms of the lease require payments of \$33,000 each January 1, starting January 1, 2017. Cleveland will pay insurance, taxes, and maintenance charges on the crane, which has an estimated life of 12 years, a fair value of \$240,000, and a cost to Cleveland of \$240,000. The estimated fair value of the crane is expected to be \$45,000 at the end of the lease term. No bargain-purchase or -renewal options are included in the contract. Both Cleveland and Abriendo adjust and close books annually at December 31. Collectibility of the lease payments is reasonably certain, and no uncertainties exist relative to unreimbursable lessor costs. Abriendo's incremental borrowing rate is 10%, and Cleveland's implicit interest rate of 9% is known to Abriendo.

Instructions

- (a) Identify the type of lease involved and give reasons for your classification. Discuss the accounting treatment that should be applied by both the lessee and the lessor.
- (b) Prepare all the entries related to the lease contract and leased asset for the year 2017 for the lessee and lessor, assuming the following amounts.
 - (1) Insurance \$500.
 - (2) Property taxes \$2,000.
 - (3) Maintenance and repairs \$650.
 - (4) Straight-line depreciation and salvage value \$15,000.
- (c) Discuss what should be presented in the balance sheet, the income statement, and the related notes of both the lessee and the lessor at December 31, 2017.

P21-3 (L02,4) (Lessee-Lessor Entries, Balance Sheet Presentation, Sales-Type Lease) Winston Industries and Ewing Inc. enter into an agreement that requires Ewing Inc. to build three diesel-electric engines to Winston's specifications. Upon completion of the engines, Winston has agreed to lease them for a period of 10 years and to assume all costs and risks of ownership. The lease is noncancelable, becomes effective on January 1, 2017, and requires annual rental payments of \$413,971 each January 1, starting January 1, 2017.

1246 Chapter 21 Accounting for Leases

Winston's incremental borrowing rate is 10%. The implicit interest rate used by Ewing Inc. and known to Winston is 8%. The total cost of building the three engines is \$2,600,000. The economic life of the engines is estimated to be 10 years, with residual value set at zero. Winston depreciates similar equipment on a straight-line basis. At the end of the lease, Winston assumes title to the engines. Collectibility of the lease payments is reasonably certain; no uncertainties exist relative to unreimbursable lessor costs.

Instructions

- Discuss the nature of this lease transaction from the viewpoints of both lessee and lessor.
- Prepare the journal entry or entries to record the transaction on January 1, 2017, on the books of Winston Industries.
- Prepare the journal entry or entries to record the transaction on January 1, 2017, on the books of Ewing Inc.
- Prepare the journal entries for both the lessee and lessor to record the first rental payment on January 1, 2017.
- Prepare the journal entries for both the lessee and lessor to record interest expense (revenue) at December 31, 2017. (Prepare a lease amortization schedule for 2 years.)
- Show the items and amounts that would be reported on the balance sheet (not notes) at December 31, 2017, for both the lessee and the lessor.

P21-4 (LO2,4) EXCEL (Balance Sheet and Income Statement Disclosure—Lessee) The following facts pertain to a noncancelable lease agreement between Alschuler Leasing Company and McKee Electronics, a lessee, for a computer system.

Inception date	October 1, 2017
Lease term	6 years
Economic life of leased equipment	6 years
Fair value of asset at October 1, 2017	\$300,383
Residual value at end of lease term	–0–
Lessor's implicit rate	10%
Lessee's incremental borrowing rate	10%
Annual lease payment due at the beginning of each year, beginning with October 1, 2017	\$62,700

The collectibility of the lease payments is reasonably predictable, and there are no important uncertainties surrounding the costs yet to be incurred by the lessor. The lessee assumes responsibility for all executory costs, which amount to \$5,500 per year and are to be paid each October 1, beginning October 1, 2017. (This \$5,500 is not included in the rental payment of \$62,700.) The asset will revert to the lessor at the end of the lease term. The straight-line depreciation method is used for all equipment.

The following amortization schedule has been prepared correctly for use by both the lessor and the lessee in accounting for this lease. The lease is to be accounted for properly as a capital lease by the lessee and as a direct-financing lease by the lessor.

Date	Annual Lease Payment/ Receipt	Interest (10%) on Unpaid Liability/Receivable	Reduction of Lease Liability/Receivable	Balance of Lease Liability/Receivable
10/01/17				\$300,383
10/01/17	\$ 62,700		\$ 62,700	237,683
10/01/18	62,700	\$23,768	38,932	198,751
10/01/19	62,700	19,875	42,825	155,926
10/01/20	62,700	15,593	47,107	108,819
10/01/21	62,700	10,882	51,818	57,001
10/01/22	62,700	5,699*	57,001	–0–
	<u>\$376,200</u>	<u>\$75,817</u>	<u>\$300,383</u>	

*Rounding error is \$1.

Instructions

- Assuming the lessee's accounting period ends on September 30, answer the following questions with respect to this lease agreement.
 - What items and amounts will appear on the lessee's income statement for the year ending September 30, 2018?
 - What items and amounts will appear on the lessee's balance sheet at September 30, 2018?
 - What items and amounts will appear on the lessee's income statement for the year ending September 30, 2019?
 - What items and amounts will appear on the lessee's balance sheet at September 30, 2019?
- Assuming the lessee's accounting period ends on December 31, answer the following questions with respect to this lease agreement.
 - What items and amounts will appear on the lessee's income statement for the year ending December 31, 2017?
 - What items and amounts will appear on the lessee's balance sheet at December 31, 2017?

- (3) What items and amounts will appear on the lessee's income statement for the year ending December 31, 2018?
 (4) What items and amounts will appear on the lessee's balance sheet at December 31, 2018?

P21-5 (L03,4) EXCEL (Balance Sheet and Income Statement Disclosure—Lessor) Assume the same information as in P21-4.

Instructions

- (a) Assuming the lessor's accounting period ends on September 30, answer the following questions with respect to this lease agreement.
- (1) What items and amounts will appear on the lessor's income statement for the year ending September 30, 2018?
 - (2) What items and amounts will appear on the lessor's balance sheet at September 30, 2018?
 - (3) What items and amounts will appear on the lessor's income statement for the year ending September 30, 2019?
 - (4) What items and amounts will appear on the lessor's balance sheet at September 30, 2019?
- (b) Assuming the lessor's accounting period ends on December 31, answer the following questions with respect to this lease agreement.
- (1) What items and amounts will appear on the lessor's income statement for the year ending December 31, 2017?
 - (2) What items and amounts will appear on the lessor's balance sheet at December 31, 2017?
 - (3) What items and amounts will appear on the lessor's income statement for the year ending December 31, 2018?
 - (4) What items and amounts will appear on the lessor's balance sheet at December 31, 2018?

P21-6 (L02,4) (Lessee Entries with Residual Value) The following facts pertain to a noncancelable lease agreement between Faldo Leasing Company and Vance Company, a lessee.

Inception date	January 1, 2017
Annual lease payment due at the beginning of each year, beginning with January 1, 2017	\$124,798
Residual value of equipment at end of lease term, guaranteed by the lessee	\$50,000
Lease term	6 years
Economic life of leased equipment	6 years
Fair value of asset at January 1, 2017	\$600,000
Lessor's implicit rate	12%
Lessee's incremental borrowing rate	12%

The lessee assumes responsibility for all executory costs, which are expected to amount to \$5,000 per year. The asset will revert to the lessor at the end of the lease term. The lessee has guaranteed the lessor a residual value of \$50,000. The lessee uses the straight-line depreciation method for all equipment.

Instructions

- (a) Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- (b) Prepare all of the journal entries for the lessee for 2017 and 2018 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31 and reversing entries are used when appropriate.

P21-7 (L02,4) GROUPWORK (Lessee Entries and Balance Sheet Presentation, Capital Lease) Ludwick Steel Company as lessee signed a lease agreement for equipment for 5 years, beginning December 31, 2017. Annual rental payments of \$40,000 are to be made at the beginning of each lease year (December 31). The taxes, insurance, and the maintenance costs are the obligation of the lessee. The interest rate used by the lessor in setting the payment schedule is 9%; Ludwick's incremental borrowing rate is 10%. Ludwick is unaware of the rate being used by the lessor. At the end of the lease, Ludwick has the option to buy the equipment for \$1, considerably below its estimated fair value at that time. The equipment has an estimated useful life of 7 years, with no salvage value. Ludwick uses the straight-line method of depreciation on similar owned equipment.

Instructions

- (a) Prepare the journal entry or entries, with explanations, that should be recorded on December 31, 2017, by Ludwick.
- (b) Prepare the journal entry or entries, with explanations, that should be recorded on December 31, 2018, by Ludwick. (Prepare the lease amortization schedule for all five payments.)
- (c) Prepare the journal entry or entries, with explanations, that should be recorded on December 31, 2019, by Ludwick.
- (d) What amounts would appear on Ludwick's December 31, 2019, balance sheet relative to the lease arrangement?

P21-8 (L02,4) (Lessee Entries and Balance Sheet Presentation, Capital Lease) On January 1, 2017, Cage Company contracts to lease equipment for 5 years, agreeing to make a payment of \$137,899 (including the executory costs of \$6,000) at the

1248 Chapter 21 Accounting for Leases

beginning of each year, starting January 1, 2017. The taxes, the insurance, and the maintenance, estimated at \$6,000 a year, are the obligations of the lessee. The leased equipment is to be capitalized at \$550,000. The asset is to be depreciated on a double-declining-balance basis, and the obligation is to be reduced on an effective-interest basis. Cage's incremental borrowing rate is 12%, and the implicit rate in the lease is 10%, which is known by Cage. Title to the equipment transfers to Cage when the lease expires. The asset has an estimated useful life of 5 years and no residual value.

Instructions

- (a) Explain the probable relationship of the \$550,000 amount to the lease arrangement.
- (b) Prepare the journal entry or entries that should be recorded on January 1, 2017, by Cage Company.
- (c) Prepare the journal entry to record depreciation of the leased asset for the year 2017.
- (d) Prepare the journal entry to record the interest expense for the year 2017.
- (e) Prepare the journal entry to record the lease payment of January 1, 2018, assuming reversing entries are not made.
- (f) What amounts will appear on the lessee's December 31, 2017, balance sheet relative to the lease contract?

P21-9 (L02) (Lessee Entries, Capital Lease with Monthly Payments) Shapiro Inc. was incorporated in 2016 to operate as a computer software service firm with an accounting fiscal year ending August 31. Shapiro's primary product is a sophisticated online inventory-control system; its customers pay a fixed fee plus a usage charge for using the system.

Shapiro has leased a large, Alpha-3 computer system from the manufacturer. The lease calls for a monthly rental of \$40,000 for the 144 months (12 years) of the lease term. The estimated useful life of the computer is 15 years.

Each scheduled monthly rental payment includes \$3,000 for full-service maintenance on the computer to be performed by the manufacturer. All rentals are payable on the first day of the month beginning with August 1, 2017, the date the computer was installed and the lease agreement was signed. The lease is noncancelable for its 12-year term, and it is secured only by the manufacturer's chattel lien on the Alpha-3 system.

This lease is to be accounted for as a capital lease by Shapiro, and it will be depreciated by the straight-line method with no expected salvage value. Borrowed funds for this type of transaction would cost Shapiro 12% per year (1% per month). Following is a schedule of the present value of \$1 for selected periods discounted at 1% per period when payments are made at the beginning of each period.

Periods (months)	Present Value of \$1 per Period Discounted at 1% per Period
1	1.000
2	1.990
3	2.970
143	76.658
144	76.899

Instructions

Prepare all entries Shapiro should have made in its accounting records during August 2017 relating to this lease. Give full explanations and show supporting computations for each entry. Remember, August 31, 2017, is the end of Shapiro's fiscal accounting period and it will be preparing financial statements on that date. Do not prepare closing entries.

(AICPA adapted)

P21-10 (L03,4) GROUPWORK (Lessor Computations and Entries, Sales-Type Lease with Unguaranteed Residual Value) George Company manufactures a check-in kiosk with an estimated economic life of 12 years and leases it to National Airlines for a period of 10 years. The normal selling price of the equipment is \$278,072, and its unguaranteed residual value at the end of the lease term is estimated to be \$20,000. National will pay annual payments of \$40,000 at the beginning of each year and all maintenance, insurance, and taxes. George incurred costs of \$180,000 in manufacturing the equipment and \$4,000 in negotiating and closing the lease. George has determined that the collectibility of the lease payments is reasonably predictable, that no additional costs will be incurred, and that the implicit interest rate is 10%.

Instructions

- (a) Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
 - (1) Lease receivable.
 - (2) Sales price.
 - (3) Cost of sales.
- (b) Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessor's journal entries for the first year.

P21-11 (L02,4) (Lessee Computations and Entries, Capital Lease with Unguaranteed Residual Value) Assume the same data as in P21-10 with National Airlines having an incremental borrowing rate of 10%.

Instructions

- (a) Discuss the nature of this lease in relation to the lessee, and compute the amount of the initial lease liability.
- (b) Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessee's journal entries for the first year. Assume straight-line depreciation.

P21-12 (L02,4) (Basic Lessee Accounting with Difficult PV Calculation) In 2016, Grishell Trucking Company negotiated and closed a long-term lease contract for newly constructed truck terminals and freight storage facilities. The buildings were erected to the company's specifications on land owned by the company. On January 1, 2017, Grishell Trucking Company took possession of the lease properties. On January 1, 2017 and 2018, the company made cash payments of \$948,000 that were recorded as rental expenses.

Although the terminals have a composite useful life of 40 years, the noncancelable lease runs for 20 years from January 1, 2017, with a bargain-purchase option available upon expiration of the lease.

The 20-year lease is effective for the period January 1, 2017, through December 31, 2036. Advance rental payments of \$800,000 are payable to the lessor on January 1 of each of the first 10 years of the lease term. Advance rental payments of \$320,000 are due on January 1 for each of the last 10 years of the lease. The company has an option to purchase all of these leased facilities for \$1 on December 31, 2036. It also must make annual payments to the lessor of \$125,000 for property taxes and \$23,000 for insurance. The lease was negotiated to assure the lessor a 6% rate of return.

Instructions

- (a) Prepare a schedule to compute for Grishell Trucking Company the present value of the terminal facilities and related obligation at January 1, 2017.
- (b) Assuming that the present value of terminal facilities and related obligation at January 1, 2017, was \$7,600,000, prepare journal entries for Grishell Trucking Company to record the:
 - (1) Cash payment to the lessor on January 1, 2019.
 - (2) Amortization of the cost of the leased properties for 2019 using the straight-line method and assuming a zero salvage value.
 - (3) Accrual of interest expense at December 31, 2019.

Selected present value factors are as follows.

Periods	For an Ordinary Annuity of \$1 at 6%	For \$1 at 6%
1	.943396	.943396
2	1.833393	.889996
8	6.209794	.627412
9	6.801692	.591898
10	7.360087	.558395
19	11.158117	.330513
20	11.469921	.311805

(AICPA adapted)

P21-13 (L03,4) (Lessor Computations and Entries, Sales-Type Lease with Guaranteed Residual Value) Amirante Inc. manufactures an X-ray machine with an estimated life of 12 years and leases it to Chambers Medical Center for a period of 10 years. The normal selling price of the machine is \$411,324, and its guaranteed residual value at the end of the noncancelable lease term is estimated to be \$15,000. The hospital will pay rents of \$60,000 at the beginning of each year and all maintenance, insurance, and taxes. Amirante Inc. incurred costs of \$250,000 in manufacturing the machine and \$14,000 in negotiating and closing the lease. Amirante Inc. has determined that the collectibility of the lease payments is reasonably predictable, that there will be no additional costs incurred, and that the implicit interest rate is 10%.

Instructions

- (a) Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
 - (1) Lease receivable at inception of the lease.
 - (2) Sales price.
 - (3) Cost of sales.
- (b) Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessor's journal entries for the first year.

P21-14 (L02,4) (Lessee Computations and Entries, Capital Lease with Guaranteed Residual Value) Assume the same data as in P21-13 and that Chambers Medical Center has an incremental borrowing rate of 10%.

1250 Chapter 21 Accounting for Leases

Instructions

- (a) Discuss the nature of this lease in relation to the lessee, and compute the amount of the initial lease liability.
- (b) Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessee's journal entries for the first year.

P21-15 (L02,4) WRITING (Operating Lease vs. Capital Lease) You are auditing the December 31, 2017, financial statements of Hockney, Inc., manufacturer of novelties and party favors. During your inspection of the company garage, you discovered that a used automobile not listed in the equipment subsidiary ledger is parked there. You ask Stacy Reeder, plant manager, about the vehicle, and she tells you that the company did not list the automobile because the company was only leasing it. The lease agreement was entered into on January 1, 2017, with Crown New and Used Cars.

You decide to review the lease agreement to ensure that the lease should be afforded operating lease treatment, and you discover the following lease terms.

1. Noncancelable term of 4 years.
2. Rental of \$3,240 per year (at the end of each year). (The present value at 8% per year is \$10,731.)
3. Estimated residual value after 4 years is \$1,100. (The present value at 8% per year is \$809.) Hockney guarantees the residual value of \$1,100.
4. Estimated economic life of the automobile is 5 years.
5. Hockney's incremental borrowing rate is 8% per year.

Instructions

You are a senior auditor writing a memo to your supervisor, the audit partner in charge of this audit, to discuss the above situation. Be sure to include (a) why you inspected the lease agreement, (b) what you determined about the lease, and (c) how you advised your client to account for this lease. Explain every journal entry that you believe is necessary to record this lease properly on the client's books. (It is also necessary to include the fact that you communicated this information to your client.)

P21-16 (L02,3,4) GROUPWORK (Lessee-Lessor Accounting for Residual Values) Goring Dairy leases its milking equipment from King Finance Company under the following lease terms.

1. The lease term is 10 years, noncancelable, and requires equal rental payments of \$30,300 due at the beginning of each year starting January 1, 2017.
2. The equipment has a fair value and cost at the inception of the lease (January 1, 2017) of \$220,404, an estimated economic life of 10 years, and a residual value (which is guaranteed by Goring Dairy) of \$20,000.
3. The lease contains no renewable options, and the equipment reverts to King Finance Company upon termination of the lease.
4. Goring Dairy's incremental borrowing rate is 9% per year. The implicit rate is also 9%.
5. Goring Dairy depreciates similar equipment that it owns on a straight-line basis.
6. Collectibility of the payments is reasonably predictable, and there are no important uncertainties surrounding the costs yet to be incurred by the lessor.

Instructions

- (a) Evaluate the criteria for classification of the lease, and describe the nature of the lease. In general, discuss how the lessee and lessor should account for the lease transaction.
- (b) Prepare the journal entries for the lessee and lessor at January 1, 2017, and December 31, 2017 (the lessee's and lessor's year-end). Assume no reversing entries.
- (c) What would have been the amount capitalized by the lessee upon the inception of the lease if:
 - (1) The residual value of \$20,000 had been guaranteed by a third party, not the lessee?
 - (2) The residual value of \$20,000 had not been guaranteed at all?
- (d) On the lessor's books, what would be the amount recorded as the Net Investment (Lease Receivable) at the inception of the lease, assuming:
 - (1) The residual value of \$20,000 had been guaranteed by a third party?
 - (2) The residual value of \$20,000 had not been guaranteed at all?
- (e) Suppose the useful life of the milking equipment is 20 years. How large would the residual value have to be at the end of 10 years in order for the lessee to qualify for the operating method? (Assume that the residual value would be guaranteed by a third party.) (*Hint:* The lessee's annual payments will be appropriately reduced as the residual value increases.)

CONCEPTS FOR ANALYSIS

CA21-1 WRITING (Lessee Accounting and Reporting) On January 1, 2017, Evans Company entered into a noncancelable lease for a machine to be used in its manufacturing operations. The lease transfers ownership of the machine to Evans by the end of the lease term. The term of the lease is 8 years. The minimum lease payment made by Evans on January 1, 2017, was one of eight equal annual payments. At the inception of the lease, the criteria established for classification as a capital lease by the lessee were met.

Instructions

- (a) What is the theoretical basis for the accounting standard that requires certain long-term leases to be capitalized by the lessee? Do not discuss the specific criteria for classifying a specific lease as a capital lease.
- (b) How should Evans account for this lease at its inception and determine the amount to be recorded?
- (c) What expenses related to this lease will Evans incur during the first year of the lease, and how will they be determined?
- (d) How should Evans report the lease transaction on its December 31, 2017, balance sheet?

CA21-2 (Lessor and Lessee Accounting and Disclosure) Sylvan Inc. entered into a noncancelable lease arrangement with Breton Leasing Corporation for a certain machine. Breton's primary business is leasing; it is not a manufacturer or dealer. Sylvan will lease the machine for a period of 3 years, which is 50% of the machine's economic life. Breton will take possession of the machine at the end of the initial 3-year lease and lease it to another, smaller company that does not need the most current version of the machine. Sylvan does not guarantee any residual value for the machine and will not purchase the machine at the end of the lease term.

Sylvan's incremental borrowing rate is 10%, and the implicit rate in the lease is 9%. Sylvan has no way of knowing the implicit rate used by Breton. Using either rate, the present value of the minimum lease payments is between 90% and 100% of the fair value of the machine at the date of the lease agreement.

Sylvan has agreed to pay all executory costs directly, and no allowance for these costs is included in the lease payments.

Breton is reasonably certain that Sylvan will pay all lease payments. Because Sylvan has agreed to pay all executory costs, there are no important uncertainties regarding costs to be incurred by Breton. Assume that no indirect costs are involved.

Instructions

- (a) With respect to Sylvan (the lessee), answer the following.
 - (1) What type of lease has been entered into? Explain the reason for your answer.
 - (2) How should Sylvan compute the appropriate amount to be recorded for the lease or asset acquired?
 - (3) What accounts will be created or affected by this transaction, and how will the lease or asset and other costs related to the transaction be matched with earnings?
 - (4) What disclosures must Sylvan make regarding this leased asset?
- (b) With respect to Breton (the lessor), answer the following.
 - (1) What type of leasing arrangement has been entered into? Explain the reason for your answer.
 - (2) How should this lease be recorded by Breton, and how are the appropriate amounts determined?
 - (3) How should Breton determine the appropriate amount of earnings to be recognized from each lease payment?
 - (4) What disclosures must Breton make regarding this lease?

(AICPA adapted)

CA21-3 (Lessee Capitalization Criteria) On January 1, Santiago Company, a lessee, entered into three noncancelable leases for brand-new equipment, Lease L, Lease M, and Lease N. None of the three leases transfers ownership of the equipment to Santiago at the end of the lease term. For each of the three leases, the present value at the beginning of the lease term of the minimum lease payments, excluding that portion of the payments representing executory costs such as insurance, maintenance, and taxes to be paid by the lessor, is 75% of the fair value of the equipment.

The following information is peculiar to each lease.

1. Lease L does not contain a bargain-purchase option. The lease term is equal to 80% of the estimated economic life of the equipment.
2. Lease M contains a bargain-purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.
3. Lease N does not contain a bargain-purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.

Instructions

- (a) How should Santiago Company classify each of the three leases above, and why? Discuss the rationale for your answer.
- (b) What amount, if any, should Santiago record as a liability at the inception of the lease for each of the three leases above?

1252 Chapter 21 Accounting for Leases

- (c) Assuming that the minimum lease payments are made on a straight-line basis, how should Santiago record each minimum lease payment for each of the three leases above?

(AICPA adapted)

CA21-4 (Comparison of Different Types of Accounting by Lessee and Lessor)

Part 1: Capital leases and operating leases are the two classifications of leases described in FASB pronouncements from the standpoint of the lessee.

Instructions

- (a) Describe how a capital lease would be accounted for by the lessee both at the inception of the lease and during the first year of the lease, assuming the lease transfers ownership of the property to the lessee by the end of the lease.
- (b) Describe how an operating lease would be accounted for by the lessee both at the inception of the lease and during the first year of the lease, assuming equal monthly payments are made by the lessee at the beginning of each month of the lease. Describe the change in accounting, if any, when rental payments are not made on a straight-line basis.

Do **not** discuss the criteria for distinguishing between capital leases and operating leases.

Part 2: Sales-type leases and direct-financing leases are two of the classifications of leases described in FASB pronouncements from the standpoint of the lessor.

Instructions

Compare and contrast a sales-type lease with a direct-financing lease as follows.

- (a) Lease receivable.
- (b) Recognition of interest revenue.
- (c) Manufacturer's or dealer's profit.

Do **not** discuss the criteria for distinguishing between the leases described above and operating leases.

(AICPA adapted)

CA21-5 (Lessee Capitalization of Bargain-Purchase Option) Albertsen Corporation is considering proposals for either leasing or purchasing aircraft. The proposed lease agreement involves a twin-engine turboprop Viking that has a fair value of \$1,000,000. This plane would be leased for a period of 10 years beginning January 1, 2017. The lease agreement is cancelable only upon accidental destruction of the plane. An annual lease payment of \$141,780 is due on January 1 of each year; the first payment is to be made on January 1, 2017. Maintenance operations are strictly scheduled by the lessor, and Albertsen Corporation will pay for these services as they are performed. Estimated annual maintenance costs are \$6,900. The lessor will pay all insurance premiums and local property taxes, which amount to a combined total of \$4,000 annually and are included in the annual lease payment of \$141,780. Upon expiration of the 10-year lease, Albertsen Corporation can purchase the Viking for \$44,440. The estimated useful life of the plane is 15 years, and its salvage value in the used plane market is estimated to be \$100,000 after 10 years. The salvage value probably will never be less than \$75,000 if the engines are overhauled and maintained as prescribed by the manufacturer. If the purchase option is not exercised, possession of the plane will revert to the lessor, and there is no provision for renewing the lease agreement beyond its termination on December 31, 2026.

Albertsen Corporation can borrow \$1,000,000 under a 10-year term loan agreement at an annual interest rate of 12%. The lessor's implicit interest rate is not expressly stated in the lease agreement, but this rate appears to be approximately 8% based on 10 net rental payments of \$137,780 per year and the initial fair value of \$1,000,000 for the plane. On January 1, 2017, the present value of all net rental payments and the purchase option of \$44,440 is \$888,890 using the 12% interest rate. The present value of all net rental payments and the \$44,440 purchase option on January 1, 2017, is \$1,022,226 using the 8% interest rate implicit in the lease agreement. The financial vice president of Albertsen Corporation has established that this lease agreement is a capital lease as defined in GAAP.

Instructions

- (a) What is the appropriate amount that Albertsen Corporation should recognize for the leased aircraft on its balance sheet after the lease is signed?
- (b) Without prejudice to your answer in part (a), assume that the annual lease payment is \$141,780 as stated in the question, that the appropriate capitalized amount for the leased aircraft is \$1,000,000 on January 1, 2017, and that the interest rate is 9%. How will the lease be reported in the December 31, 2017, balance sheet and related income statement? (Ignore any income tax implications.)

(CMA adapted)

CA21-6 ETHICS (Lease Capitalization, Bargain-Purchase Option) Baden Corporation entered into a lease agreement for 10 photocopy machines for its corporate headquarters. The lease agreement qualifies as an operating lease in all terms except there is a bargain-purchase option. After the 5-year lease term, the corporation can purchase each copier for \$1,000, when the anticipated fair value is \$2,500.

Jerry Suffolk, the financial vice president, thinks the financial statements must recognize the lease agreement as a capital lease because of the bargain-purchase option. The controller, Diane Buchanan, disagrees: "Although I don't know much about the copiers themselves, there is a way to avoid recording the lease liability." She argues that the corporation might claim that copier technology advances rapidly and that by the end of the lease term the machines will most likely not be worth the \$1,000 bargain price.

Instructions

Answer the following questions.

- What ethical issue is at stake?
- Should the controller's argument be accepted if she does not really know much about copier technology? Would it make a difference if the controller were knowledgeable about the pace of change in copier technology?
- What should Suffolk do?

***CA21-7 (Sale-Leaseback)** On January 1, 2017, Perriman Company sold equipment for cash and leased it back. As seller-lessee, Perriman retained the right to substantially all of the remaining use of the equipment.

The term of the lease is 8 years. There is a gain on the sale portion of the transaction. The lease portion of the transaction is classified appropriately as a capital lease.

Instructions

- What is the theoretical basis for requiring lessees to capitalize certain long-term leases? **Do not discuss the specific criteria for classifying a lease as a capital lease.**
- (1) How should Perriman account for the sale portion of the sale-leaseback transaction at January 1, 2017?
(2) How should Perriman account for the leaseback portion of the sale-leaseback transaction at January 1, 2017?
- How should Perriman account for the gain on the sale portion of the sale-leaseback transaction during the first year of the lease? Why?

(AICPA adapted)

USING YOUR JUDGMENT

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements, accompanying notes, and management's discussion and analysis to answer the following questions.

- What types of leases are used by P&G?
- What amount of capital leases was reported by P&G in total and for less than one year?
- What minimum annual rental commitments under all noncancelable leases at June 30, 2014, did P&G disclose?

Comparative Analysis Case

Delta Air Lines and Southwest Airlines

The financial statements and notes to the financial statements for **Delta Air Lines** and **Southwest Airlines** can be found online.

Instructions

Use information found in the companies' financial reports to answer the following questions.

- What types of leases are used by Southwest and on what assets are these leases primarily used?
- How long-term are some of Southwest's leases? What are some of the characteristics or provisions of Southwest's (as lessee) leases?
- What did Southwest report in 2014 as its future minimum annual rental commitments under noncancelable leases?
- At year-end 2014, what was the present value of the minimum rental payments under Southwest's capital leases? How much imputed interest was deducted from the future minimum annual rental commitments to arrive at the present value?
- What were the amounts and details reported by Southwest for rental expense in 2014, 2013, and 2012?
- How does Delta's use of leases compare with Southwest's?

Financial Statement Analysis Case

Wal-Mart Stores, Inc.

Presented in Illustration 21-31 are the financial statement disclosures from the January 31, 2015, annual report of **Wal-Mart Stores, Inc.**

Instructions

Answer the following questions related to these disclosures.

- What is the total obligation under capital leases at January 31, 2015, for Wal-Mart?
- What is the total rental expense reported for leasing activity for the year ended January 31, 2015, for Wal-Mart?
- Estimate the off-balance-sheet liability due to Wal-Mart's operating leases at January 31, 2015.

Accounting, Analysis, and Principles

Salaur Company is evaluating a lease arrangement being offered by TSP Company for use of a computer system. The lease is noncancelable, and in no case does Salaur receive title to the computers during or at the end of the lease term. The lease starts on January 1, 2017, with the first rental payment due on January 1, 2017. Additional information related to the lease is as follows.

Yearly rental	\$3,557.25
Lease term	3 years
Estimated economic life	5 years
Purchase option	\$3,000 at end of 3 years, which approximates fair value
Renewal option	1 year at \$1,500; no penalty for nonrenewal; standard renewal clause
Fair value at inception of lease	\$10,000
Cost of asset to lessor	\$10,000
Residual value:	
Guaranteed	–0–
Unguaranteed	\$3,000
Lessor's implicit rate (known by the lessee)	12%
Executory costs paid by:	Lessor; estimated to be \$500 per year (included in rental equipment)
Estimated fair value at end of lease	\$3,000

Accounting

Analyze the lease capitalization criteria for this lease for Salaur Company. Prepare the journal entry for Salaur on January 1, 2017.

Analysis

Briefly discuss the impact of the accounting for this lease for two common ratios: return on assets and debt to total assets.

Principles

What element of faithful representation (completeness, neutrality, free from error) is being addressed when a company like Salaur evaluates lease capitalization criteria?

Codification Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE21-1 Access the glossary (“Master Glossary”) to answer the following.

- What is a bargain-purchase option?
- What is the definition of “incremental borrowing rate”?
- What is the definition of “estimated residual value”?
- What is an unguaranteed residual value?

CE21-2 What comprises a lessee’s minimum lease payments? What is excluded?

CE21-3 What information should a lessee disclose about its capital leases in its financial statements and footnotes?

CE21-4 How should a lessor measure its initial gross investment in either a sales-type lease or a direct-financing lease?

Codification Research Case

Daniel Hardware Co. is considering alternative financing arrangements for equipment used in its warehouses. Besides purchasing the equipment outright, Daniel is also considering a lease. Accounting for the outright purchase is fairly straightforward, but because Daniel has not used equipment leases in the past, the accounting staff is less informed about the specific accounting rules for leases.

The staff is aware of some lease rules related to a “90 percent of fair value,” “75 percent of useful life,” and “residual value deficiencies,” but they are unsure about the meanings of these terms in lease accounting. Daniel has asked you to conduct some research on these items related to lease capitalization criteria.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- What is the objective of lease classification criteria?
- An important element of evaluating leases is determining whether substantially all of the risks and rewards of ownership are transferred in the lease. How is “substantially all” defined in the authoritative literature?
- Besides the noncancelable term of the lease, name at least three other considerations in determining the “lease term.”

- (d) A common issue in the accounting for leases concerns lease requirements that the lessee make up a residual value deficiency that is attributable to damage, extraordinary wear and tear, or excessive usage (e.g., excessive mileage on a leased vehicle). Do these features constitute a lessee guarantee of the residual value such that the estimated residual value of the leased property at the end of the lease term should be included in minimum lease payments? Explain.

ADDITIONAL PROFESSIONAL RESOURCES

Go to **WileyPLUS** for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

IFRS Insights

This **IFRS Insight** covers IFRS requirements related to leasing as of January 1, 2016. Recently, the ISAB has issued a new standard on leasing which is effective January 1, 2019. In this section, we cover legacy IFRS. A revised **IFRS Insight** covering the new IFRS standard on leasing, as a complement to the new chapter covering the expected new GAAP standard, will be available online in summer 2016.

LEARNING OBJECTIVE 6

Compare the accounting for leases under GAAP and IFRS.

Leasing is a global business. Lessors and lessees enter into arrangements with one another without regard to national boundaries. Although GAAP and IFRS for leasing are similar, both the FASB and the IASB have decided that the existing accounting does not provide the most useful, transparent, and complete information about leasing transactions that should be provided in the financial statements.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to the accounting for leases.

Similarities

- Both GAAP and IFRS share the same objective of recording leases by lessees and lessors according to their economic substance—that is, according to the definitions of assets and liabilities.
- Much of the terminology for lease accounting in IFRS and GAAP is the same.
- Under IFRS, lessees and lessors use the same general lease capitalization criteria to determine if the risks and rewards of ownership have been transferred in the lease.

Differences

- One difference in lease terminology is that finance leases are referred to as capital leases in GAAP.
- GAAP for leases uses bright-line criteria to determine if a lease arrangement transfers the risks and rewards of ownership; IFRS is more general in its provisions.
- GAAP has additional lessor criteria: payments are collectible and there are no additional costs associated with a lease.
- IFRS requires that lessees use the implicit rate to record a lease unless it is impractical to determine the lessor's implicit rate. GAAP requires use of the incremental rate unless the implicit rate is known by the lessee and the implicit rate is lower than the incremental rate.
- Under GAAP, extensive disclosure of future non-cancelable lease payments is required for each of the next five years and the years thereafter. Although some international companies (e.g., **Nokia**) provide a year-by-year breakout of payments due in years 1 through 5, IFRS does not require it.
- The FASB standard for leases was originally issued in 1976. The standard (*SFAS No. 13*) has been the subject of more than 30 interpretations since its issuance. The IFRS leasing standard is *IAS 17*, first issued in 1982. This standard is the subject of only three interpretations. One reason for this small number of interpretations is that IFRS does not specifically address a number of leasing transactions that are covered by GAAP. Examples include lease agreements for natural resources, sale-leasebacks, real estate leases, and leveraged leases.

ABOUT THE NUMBERS

Accounting by the Lessee

If **Air France** (the lessee) **capitalizes** a lease, it records an asset and a liability generally equal to the present value of the rental payments. **ILFC** (the lessor), having transferred substantially all the benefits and risks of ownership, recognizes a sale by removing the asset from the statement of financial position and replacing it with a receivable.

Under IFRS, a lease is classified as a **finance lease** if it transfers substantially all the risks and rewards incidental to ownership. In order to record a lease as a finance lease, the lease must be non-cancelable. The IASB identifies the four criteria listed in Illustration IFRS21-1 for assessing whether the risks and rewards have been transferred in the lease arrangement.

Capitalization Criteria (Lessee)

1. The lease transfers ownership of the property to the lessee.
2. The lease contains a bargain-purchase option.
3. The lease term is for the major part of the economic life of the asset.
4. The present value of the minimum lease payments amounts to substantially all of the fair value of the leased asset.

ILLUSTRATION IFRS21-1

Capitalization Criteria for Lessee

Air France classifies and accounts for leases that **do not meet any of the four criteria** as **operating leases**. Illustration IFRS21-2 shows that a lease meeting any one of the four criteria results in the lessee having a finance lease.

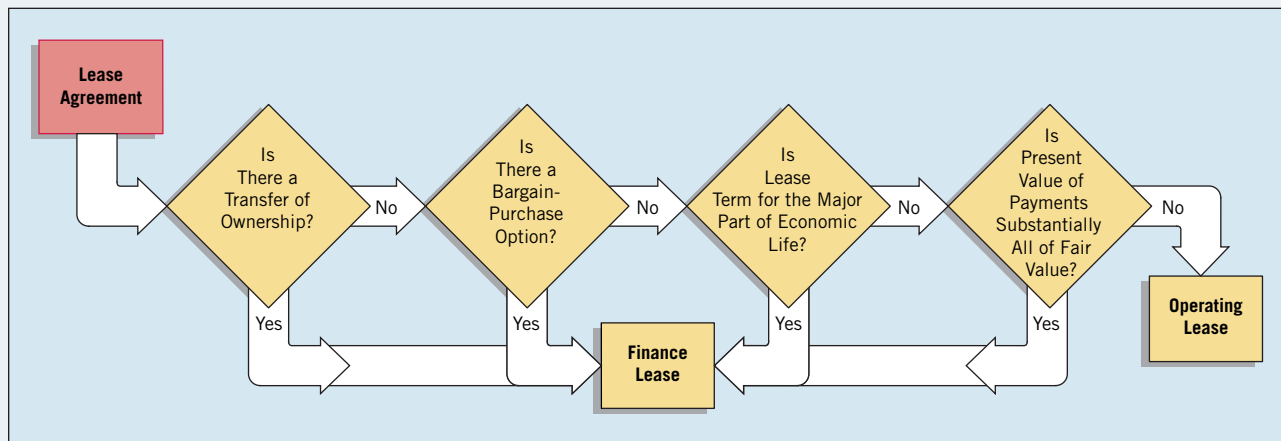

ILLUSTRATION IFRS21-2

Diagram of Lessee's Criteria for Lease Classification

Thus, the proper classification of a lease is determined based on the substance of the lease transaction rather than on its mere form. This determination often requires the use of professional judgment of whether the risks and rewards of ownership are transferred.

As indicated, the capitalization criteria for finance leases are similar to those used in GAAP for capital leases (see Illustration 21-3 on page 1201). The main differences relate to the economic life and recoverability tests, which we describe in the following sections.

Economic Life Test

If the lease period is for a major part of the asset's economic life, the lessor transfers most of the risks and rewards of ownership to the lessee. Capitalization is therefore appropriate. However, determining the lease term and what constitutes the major part of the economic life of the asset can be troublesome.

The IASB has not defined what is meant by the "major part" of an asset's economic life. In practice, following the IASB Hierarchy, it has been customary to look to GAAP, which has a 75 percent of economic life threshold for evaluating the economic life test. While the 75 percent guideline may be a useful reference point, it does not represent an automatic cutoff point. Rather, lessees and lessors should consider all relevant factors when assessing whether substantially all

the risks and rewards of ownership have been transferred in the lease.²¹ *For purposes of homework, assume a 75 percent threshold for the economic life test, unless otherwise stated.*

The **lease term** is generally considered to be the fixed, non-cancelable term of the lease. However, a bargain-renewal option, if provided in the lease agreement, can extend this period. A **bargain-renewal option** allows the lessee to renew the lease for a rental that is lower than the expected fair rental at the date the option becomes exercisable. At the inception of the lease, the difference between the renewal rental and the expected fair rental must be great enough to make exercise of the option to renew reasonably assured.

For example, assume that **Carrefour** leases **Lenovo** PCs for two years at a rental of \$100 per month per computer and subsequently can lease them for \$10 per month per computer for another two years. The lease clearly offers a bargain-renewal option; the lease term is considered to be four years. However, with bargain-renewal options, as with bargain-purchase options, it is sometimes difficult to determine what is a bargain.

Determining estimated economic life can also pose problems, especially if the leased item is a specialized item or has been used for a significant period of time. For example, determining the economic life of a nuclear core is extremely difficult. It is subject to much more than normal “wear and tear.”

Recovery of Investment Test

If the present value of the minimum lease payments equals or exceeds substantially all of the fair value of the asset, then a lessee like **Air France** should capitalize the leased asset. Why? If the present value of the minimum lease payments is reasonably close to the fair value of the aircraft, Air France is effectively purchasing the asset.

As with the economic life test, the IASB has not defined what is meant by “substantially all” of an asset’s fair value. In practice, it has been customary to look to GAAP, which has a 90 percent of fair value threshold for assessing the recovery of investment test. Again, rather than focusing on any single element of the lease classification indicators, lessees and lessors should consider all relevant factors when evaluating lease classification criteria.²² *For purposes of homework, assume a 90 percent threshold for the recovery of investment test.*

Determining the present value of the minimum lease payments involves three important concepts: (1) minimum lease payments, (2) executory costs, and (3) discount rate. The IFRS guidelines for minimum lease payments and executory costs are the same as that of GAAP.

Discount Rate. A lessee, like Air France, computes the present value of the minimum lease payments using the **implicit interest rate**. This rate is defined as the discount rate that, at the inception of the lease, causes the aggregate present value of the minimum lease payments and the unguaranteed residual value to be equal to the fair value of the leased asset.

While Air France may argue that it cannot determine the implicit rate of the lessor, in most cases Air France can approximate the implicit rate used by ILFC. In the event that it is impracticable to determine the implicit rate, Air France should use its incremental borrowing rate. The incremental borrowing rate is the rate of interest the lessee would have to pay on a similar lease or the rate that, at the inception of the lease, the lessee would incur to borrow over a similar term the funds necessary to purchase the asset.

If known or practicable to estimate, use of the implicit rate is preferred. This is because **the implicit rate of ILFC is generally a more realistic rate** to use in determining the amount (if any) to report as the asset and related liability for Air France. In addition, use of the implicit rate avoids use of **an artificially high incremental borrowing rate** that would cause the present value of the minimum lease payments to be lower, supporting an argument that the lease does not meet the recovery of investment test. Use of such a rate would thus make it more likely that the lessee avoids capitalization of the leased asset and related liability.

The determination of whether or not a reasonable estimate could be made will require judgment, particularly where the result from using the incremental borrowing rate comes close to meeting the fair value test. Because Air France **may not capitalize the leased property at more than its fair value** (as we discuss later), it cannot use an excessively low discount rate.

²¹See KPMG, *Insights into IFRS*, Fifth Edition (Thomson Reuters: London, 2008), p. 1011; and The International Financial Reporting Group of Ernst and Young, *International GAAP, 2009* (John Wiley and Sons: New York, 2009), p. 1356.

²²*Ibid.* The 75 percent of useful life and 90 percent of fair value “bright-line” cutoffs in GAAP have been criticized. Many believe that lessees structure leases so as to just miss the 75 and 90 percent cutoffs, thereby avoiding classifying leases as finance leases and keeping leased assets and the related liabilities off the statement of financial position. See Warren McGregor, “Accounting for Leases: A New Approach,” Special Report (Norwalk, Conn.: FASB, 1996).

Finance Lease Method (Lessee)

To illustrate a finance lease, assume that **CNH Capital** (a subsidiary of CNH Global) and **Ivanhoe Mines Ltd.** sign a lease agreement dated January 1, 2017, that calls for CNH to lease a front-end loader to Ivanhoe beginning January 1, 2017. The terms and provisions of the lease agreement, and other pertinent data, are as follows.

- The term of the lease is five years. The lease agreement is non-cancelable, requiring equal rental payments of \$25,981.62 at the beginning of each year (annuity-due basis).
- The loader has a fair value at the inception of the lease of \$100,000, an estimated economic life of five years, and no residual value.
- Ivanhoe pays all of the executory costs directly to third parties except for the property taxes of \$2,000 per year, which is included as part of its annual payments to CNH.
- The lease contains no renewal options. The loader reverts to CNH at the termination of the lease.
- Ivanhoe's incremental borrowing rate is 11 percent per year.
- Ivanhoe depreciates similar equipment that it owns on a straight-line basis.
- CNH sets the annual rental to earn a rate of return on its investment of 10 percent per year; Ivanhoe knows this fact.

The lease meets the criteria for classification as a finance lease for the following reasons:

1. The lease term of five years, being equal to the equipment's estimated economic life of five years, satisfies the economic life test.
2. The present value of the minimum lease payments (\$100,000 as computed below) equals the fair value of the loader (\$100,000).

The minimum lease payments are \$119,908.10 ($\$25,981.62 \times 5$). Ivanhoe computes the amount capitalized as leased assets as the present value of the minimum lease payments (excluding executory costs—property taxes of \$2,000) as shown in Illustration IFRS21-3.

Capitalized amount	=	$(\$25,981.62 - \$2,000) \times \text{Present value of an annuity due of 1 for 5 periods at 10\% (Table 6-5)}$
	=	$\$23,981.62 \times 4.16986$
	=	\$100,000

ILLUSTRATION IFRS21-3

Computation of Capitalized Lease Payments

Ivanhoe uses CNH's implicit interest rate of 10 percent instead of its incremental borrowing rate of 11 percent because it knows about it.²³ Ivanhoe records the finance lease on its books on January 1, 2017, as:

Leased Equipment (under finance leases)	100,000	
Lease Liability		100,000

Note that the entry records the obligation at the net amount of \$100,000 (the present value of the future rental payments) rather than at the gross amount of \$119,908.10 ($\$23,981.62 \times 5$).

Ivanhoe records the **first lease payment on January 1, 2017**, as follows.

Property Tax Expense	2,000.00	
Lease Liability	23,981.62	
Cash		25,981.62

Each lease payment of \$25,981.62 consists of three elements: (1) a reduction in the lease liability, (2) a financing cost (interest expense), and (3) executory costs (property taxes). The total financing cost (interest expense) over the term of the lease is \$19,908.10. This amount is the difference between the present value of the lease payments (\$100,000) and the actual cash disbursed, net of executory costs (\$119,908.10). The annual interest expense, applying the effective-interest method, is a function of the outstanding liability, as Illustration IFRS21-4 (on page 1260) shows.

Calculator Solution for Lease Payment		
	Inputs	Answer
N	5	
I	10	
PV	?	100,000
PMT	-23,981.59*	
FV	0	

²³If it is impracticable for Ivanhoe to determine the implicit rate and it has an incremental borrowing rate of, say, 9 percent (lower than the 10 percent rate used by CNH), the present value computation would yield a capitalized amount of \$101,675.35 ($\$23,981.62 \times 4.23972$). Thus, use of an unrealistically low discount rate could lead to a lessee recording a leased asset at an amount exceeding the fair value of the equipment, which is generally prohibited in IFRS. This explains why the implicit rate should be used to capitalize the minimum lease payments.

**ILLUSTRATION
IFRS21-4**Lease Amortization
Schedule for Lessee—
Annuity-Due Basis

IVANHOE MINES					
LEASE AMORTIZATION SCHEDULE					
ANNUITY-DUE BASIS					
Date	Annual Lease Payment	Executory Costs	Interest (10%) on Liability	Reduction of Lease Liability	Lease Liability
	(a)	(b)	(c)	(d)	(e)
1/1/17					\$100,000.00
1/1/17	\$ 25,981.62	\$ 2,000	\$ –0–	\$ 23,981.62	76,018.38
1/1/18	25,981.62	2,000	7,601.84	16,379.78	59,638.60
1/1/19	25,981.62	2,000	5,963.86	18,017.76	41,620.84
1/1/20	25,981.62	2,000	4,162.08	19,819.54	21,801.30
1/1/21	25,981.62	2,000	2,180.32*	21,801.30	–0–
	<u>\$129,908.10</u>	<u>\$10,000</u>	<u>\$19,908.10</u>	<u>\$100,000.00</u>	

(a) Lease payment as required by lease.
 (b) Executory costs included in rental payment.
 (c) Ten percent of the preceding balance of (e) except for 1/1/17; since this is an annuity due, no time has elapsed at the date of the first payment and no interest has accrued.
 (d) (a) minus (b) and (c).
 (e) Preceding balance minus (d).
 *Rounded by 19 cents.

At the end of its fiscal year, December 31, 2017, Ivanhoe records **accrued interest** as follows.

Interest Expense	7,601.84	
Interest Payable		7,601.84

Depreciation of the leased equipment over its five-year lease term, applying Ivanhoe's normal depreciation policy (straight-line method), results in the following entry on December 31, 2017.

Depreciation Expense (finance leases)	20,000	
Accumulated Depreciation—Finance Leases (\$100,000 ÷ 5 years)		20,000

At December 31, 2017, Ivanhoe separately identifies the assets recorded under finance leases on its statement of financial position. Similarly, it separately identifies the related obligations. Thus, once a lessee capitalizes a finance lease, the accounting under IFRS is the same as that applied for capital leases under GAAP.

Accounting by the Lessor

For accounting purposes, under IFRS the **lessor** also classifies leases as operating or finance leases. Finance leases may be further subdivided into direct-financing and sales-type leases.

As with lessee accounting, if the lease transfers substantially all the risks and rewards incidental to ownership, the lessor shall classify and account for the arrangement as a finance lease. Lessors evaluate the same criteria shown in Illustration IFRS21-1 to make this determination.

The distinction for the lessor between a direct-financing lease and a sales-type lease is the presence or absence of a manufacturer's or dealer's profit (or loss). A sales-type lease involves a manufacturer's or dealer's profit, and a direct-financing lease does not. The profit (or loss) to the lessor is evidenced by the difference between the fair value of the leased property at the inception of the lease and the lessor's cost or carrying amount (book value).

Normally, sales-type leases arise when manufacturers or dealers use leasing as a means of marketing their products. For example, a computer manufacturer will lease its computer equipment (possibly through a captive) to businesses and institutions. Direct-financing leases generally result from arrangements with lessors that are primarily engaged in financing operations (e.g., banks).

Lessors classify and account for all leases that do not qualify as direct-financing or sales-type leases as operating leases. Illustration IFRS21-5 shows the circumstances under which a lessor classifies a lease as operating, direct-financing, or sales-type.

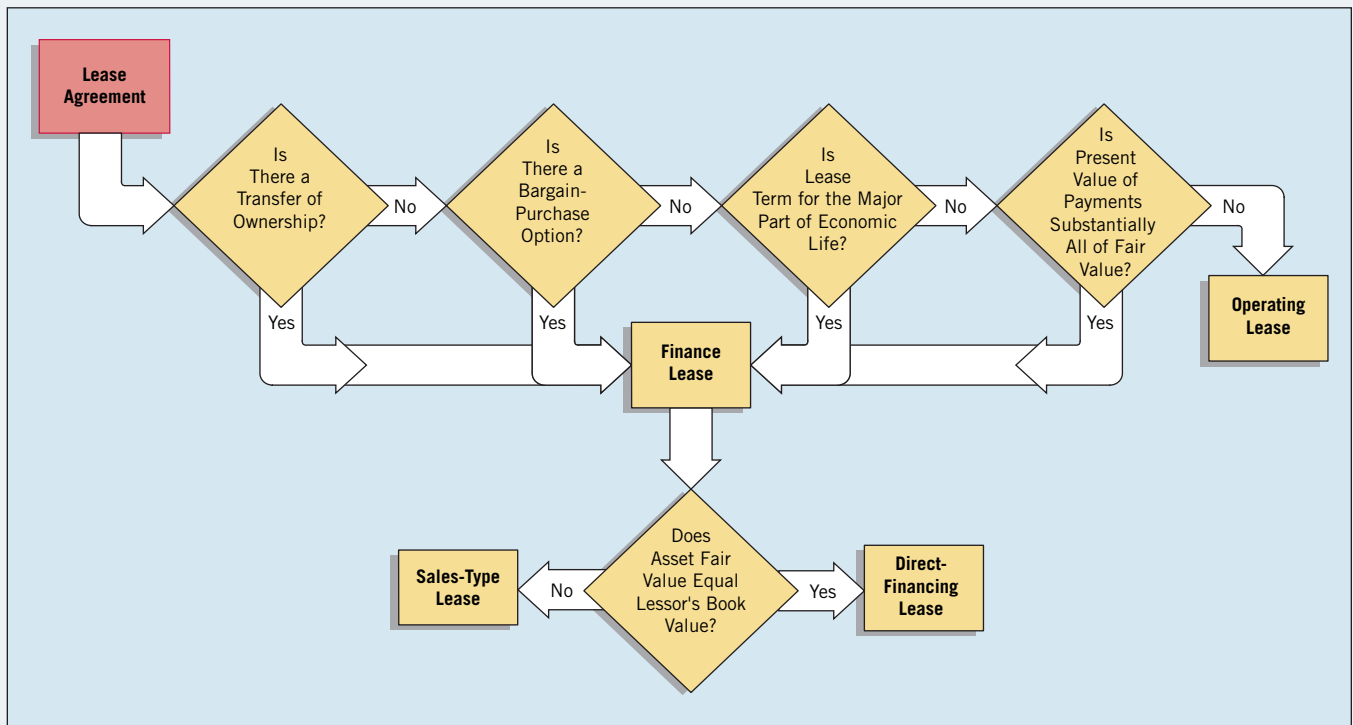

ILLUSTRATION IFRS21-5

Diagram of Lessor's
Criteria for Lease
Classification

For purposes of comparison with the lessee's accounting, we will illustrate only the operating and direct-financing leases in the following section.

Direct-Financing Method (Lessor)

Direct-financing leases are in substance the financing of an asset purchase by the lessee. In this type of lease, the lessor records a **lease receivable** instead of a leased asset. The lease receivable is the present value of the minimum lease payments plus the present value of the unguaranteed residual value. Remember that "minimum lease payments" include (1) rental payments (excluding executory costs), (2) bargain-purchase option (if any), (3) guaranteed residual value (if any), and (4) penalty for failure to renew (if any).

Thus, the lessor records the residual value, whether guaranteed or not. Also, recall that if the lessor pays any executory costs, then it should reduce the rental payment by that amount in computing minimum lease payments.

The following presentation, using the data from the preceding CNH/Ivanhoe example on pages 1259–1260, illustrates the accounting treatment for a direct-financing lease. We repeat here the information relevant to CNH in accounting for this lease transaction.

1. The term of the lease is five years beginning January 1, 2017, non-cancelable, and requires equal rental payments of \$25,981.62 at the beginning of each year. Payments include \$2,000 of executory costs (property taxes).
2. The equipment (front-end loader) has a cost of \$100,000 to CNH, a fair value at the inception of the lease of \$100,000, an estimated economic life of five years, and no residual value.
3. CNH incurred no initial direct costs in negotiating and closing the lease transaction.
4. The lease contains no renewal options. The equipment reverts to CNH at the termination of the lease.
5. CNH sets the annual lease payments to ensure a rate of return of 10 percent (implicit rate) on its investment, as shown in Illustration IFRS21-6 (on page 1262).

**ILLUSTRATION
IFRS21-6**Computation of Lease
Payments

Fair value of leased equipment	\$100,000.00
Less: Present value of residual value	—0—
Amount to be recovered by lessor through lease payments	<u>\$100,000.00</u>
Five beginning-of-the-year lease payments to yield a 10% return ($\$100,000 \div 4.16986^a$)	<u>\$ 23,981.62</u>
^a PV of an annuity due of 1 for 5 years at 10% (Table 6-5).	

As shown in the earlier analysis, the lease meets the criteria for classification as a direct-financing lease for two reasons: (1) the lease term equals the equipment's estimated economic life, and (2) the present value of the minimum lease payments equals the equipment's fair value. It is not a sales-type lease because there is no difference between the fair value (\$100,000) of the loader and CNH's cost (\$100,000).

The lease receivable is the present value of the minimum lease payments (excluding executory costs which are property taxes of \$2,000). CNH computes it as follows.

**ILLUSTRATION
IFRS21-7**Computation of Lease
Receivable

Lease receivable = $(\$25,981.62 - \$2,000) \times$ Present value of an annuity due of 1 for 5 periods at 10% (Table 6-5)
= $\$23,981.62 \times 4.16986$
= $\$100,000$

CNH records the lease of the asset and the resulting receivable on January 1, 2017 (the inception of the lease), as follows.

Lease Receivable	100,000	
Equipment		100,000

Companies often **report** the lease receivable in the statement of financial position as "Net investment in finance leases." Companies classify it either as current or non-current, depending on when they recover the net investment.

Under IFRS, once a lessor determines classification of a lease as either direct-financing or sales-type, the accounting for the lease arrangement is the same as GAAP (as shown on pages 1212–1215 and 1222–1224).

ON THE HORIZON

Lease accounting is one of the areas identified in the IASB/FASB Memorandum of Understanding. The Boards have developed rules based on "right-of-use" (ROU) which require that all leases with terms longer than one year be recorded on the balance sheet. The IASB has decided on a single approach for lessee accounting. Under that approach, a lessee would account for all leases similar to the current approach for capital leases, recognizing amortization of the ROU asset separately from interest on the lease liability. The FASB reached a different conclusion on the expense recognition for operating-type leases. Under the FASB model, the income effects will reflect a straight-line expense pattern, reported as a single total lease expense. The Boards are generally converged with respect to lessor accounting. A final standard is expected in 2016. You can follow the lease project at either the FASB (<http://www.fasb.org>) or IASB (<http://www.iasb.org>) websites.

IFRS SELF-TEST QUESTIONS

1. Which of the following is **not** a criterion for a lease to be recorded as a finance lease?

- (a) There is transfer of ownership.
- (b) The lease is cancelable.
- (c) The lease term is for the major part of the economic life of the asset.
- (d) There is a bargain-purchase option.

2. Under IFRS, in computing the present value of the minimum lease payments, the lessee should:

- (a) use its incremental borrowing rate in all cases.
- (b) use either its incremental borrowing rate or the implicit rate of the lessor, whichever is higher, assuming that the implicit rate is known to the lessee.

- (c) use either its incremental borrowing rate or the implicit rate of the lessor, whichever is lower, assuming that the implicit rate is known to the lessee.
 - (d) use the implicit rate of the lessor, unless it is impracticable to determine the implicit rate.
- 3.** A lease that involves a manufacturer's or dealer's profit is a(an):
- (a) direct financing lease.
 - (b) finance lease.
 - (c) operating lease.
 - (d) sales-type lease.
- 4.** Which of the following statements is **true** when comparing the accounting for leasing transactions under GAAP with IFRS?
- (a) IFRS for leases is more "rules-based" than GAAP and includes many bright-line criteria to determine ownership.
 - (b) IFRS requires that companies provide a year-by-year breakout of future non-cancelable lease payments due in years 1 through 5.
 - (c) The IFRS leasing standard is the subject of over 30 interpretations since its issuance in 1982.
 - (d) IFRS does not provide detailed guidance for leases of natural resources, sale-leasebacks, and leveraged leases.
- 5.** All of the following statements about lease accounting under IFRS and GAAP are true **except**:
- (a) IFRS requires a year-by-year breakout of payments related to leasing arrangements.
 - (b) IFRS is more general in its lease accounting provisions than is GAAP.
 - (c) The IFRS leasing standard, *IAS 17*, is the subject of only three interpretations.
 - (d) Finance leases under IFRS are referred to as capital leases under GAAP.

IFRS CONCEPTS AND APPLICATION

IFRS21-1 Where can authoritative IFRS related to the accounting for leases be found?

IFRS21-2 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for leases.

IFRS21-3 Briefly discuss the IASB and FASB efforts to converge their accounting guidelines for leases.

IFRS21-4 Outline the accounting procedures involved in applying the operating lease method by a lessee.

IFRS21-5 Outline the accounting procedures involved in applying the finance lease method by a lessee.

IFRS21-6 Identify the lease classifications for lessors and the criteria that must be met for each classification.

IFRS21-7 Rick Kleckner Corporation recorded a finance lease at \$300,000 on January 1, 2017. The interest rate is 12%. Kleckner Corporation made the first lease payment of \$53,920 on January 1, 2017. The lease requires eight annual payments. The equipment has a useful life of 8 years with no residual value. Prepare Kleckner Corporation's December 31, 2017, adjusting entries. Assume straight-line depreciation.

IFRS21-8 Use the information for Rick Kleckner Corporation from IFRS21-7. Assume that at December 31, 2017, Kleckner made an adjusting entry to accrue interest expense of \$29,530 on the lease. Prepare Kleckner's January 1, 2018, journal entry to record the second lease payment of \$53,920.

IFRS21-9 Brecker Company leases an automobile with a fair value of \$10,906 from Emporia Motors, Inc., on the following terms:

1. Non-cancelable term of 50 months.
2. Rental of \$250 per month (at end of each month). (The present value at 1% per month is \$9,800.)
3. Estimated residual value after 50 months is \$1,180. (The present value at 1% per month is \$715.) Brecker Company guarantees the residual value of \$1,180.
4. Estimated economic life of the automobile is 60 months.
5. Brecker Company's incremental borrowing rate is 12% a year (1% a month). It is impracticable to determine Emporia's implicit rate.

Instructions

- (a) What is the nature of this lease to Brecker Company?
- (b) What is the present value of the minimum lease payments?
- (c) Record the lease on Brecker Company's books at the date of inception.
- (d) Record the first month's depreciation on Brecker Company's books (assume straight-line).
- (e) Record the first month's lease payment.

1264 Chapter 21 Accounting for Leases

IFRS21-10 The following facts pertain to a non-cancelable lease agreement between Lennox Leasing Company and Gill Company, a lessee.

Inception date: May 1, 2017

Annual lease payment due at the beginning of each year, beginning with May 1, 2017: \$18,829.49

Bargain-purchase option price at end of lease term: \$4,000.00

Lease term: 5 years

Economic life of leased equipment: 10 years

Lessor's cost: \$65,000.00; fair value of asset at May 1, 2017, \$81,000.00

Lessor's implicit rate: 10%; lessee's incremental borrowing rate 10%

The lessee assumes responsibility for all executory costs.

Instructions

(Round all numbers to the nearest cent.)

- (a) Discuss the nature of this lease to Gill Company.
- (b) Discuss the nature of this lease to Lennox Company.
- (c) Prepare a lease amortization schedule for Gill Company for the 5-year lease term.
- (d) Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2017 and 2018. Gill's annual accounting period ends on December 31. Reversing entries are used by Gill. Assume Gill uses straight-line depreciation.

IFRS21-11 A lease agreement between Lennox Leasing Company and Gill Company is described in IFRS21-10. Refer to the data in IFRS21-10 and do the following for the lessor.

Instructions

(Round all numbers to the nearest cent.)

- (a) Compute the amount of the lease receivable at the inception of the lease.
- (b) Prepare a lease amortization schedule for Lennox Leasing Company for the 5-year lease term.
- (c) Prepare the journal entries to reflect the signing of the lease agreement and to record the receipts and income related to this lease for the years 2017, 2018, and 2019. The lessor's accounting period ends on December 31. Reversing entries are not used by Lennox.

Professional Research

IFRS21-12 Daniel Hardware Co. is considering alternative financing arrangements for equipment used in its warehouses. Besides purchasing the equipment outright, Daniel is also considering a lease. Accounting for the outright purchase is fairly straightforward, but because Daniel has not used equipment leases in the past, the accounting staff is less informed about the specific accounting rules for leases. The staff is aware of some general lease rules related to "risks and rewards," but they are unsure about the meanings of these terms in lease accounting. Daniel has asked you to conduct some research on these items related to lease capitalization criteria.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) What is the objective of lease classification criteria?
- (b) An important element of evaluating leases is determining whether substantially all of the risks and rewards of ownership are transferred in the lease. How is "substantially all" defined in the authoritative literature?
- (c) Besides the non-cancelable term of the lease, name at least three other considerations in determining the "lease term."

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS21-13 The financial statements of M&S are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) What types of leases are used by M&S?
- (b) What amount of finance leases was reported by M&S in total and for less than one year?
- (c) What minimum annual rental commitments under all non-cancelable leases at 28 March 2015 did M&S disclose?

ANSWERS TO IFRS SELF-TEST QUESTIONS

Accounting Changes and Error Analysis

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1** Identify types of accounting changes and understand the accounting for changes in accounting principles.
- 2** Describe the accounting for changes in estimates and changes in the reporting entity.
- 3** Describe the accounting for correction of errors.
- 4** Analyze the effect of errors.

IN THE DARK

The FASB's conceptual framework describes comparability (including consistency) as one of the qualitative characteristics that contributes to the usefulness of accounting information. Unfortunately, companies are finding it difficult to maintain comparability and consistency due to the numerous changes in accounting principles mandated by the FASB. In addition, a number of companies have faced restatements due to errors in their financial statements. For example, the table below shows types and percentages of adjustments required for 300 material errors in a recent year.

Tax expense/benefit/deferral/other (FAS 109)	19.9%	Acquisitions, mergers, disposals, and reorganization accounting	4.8%
Revenue recognition	13.4	Consolidation and off-balance-sheet	4.8
Liabilities, payables, reserves, and accrual estimate failures	7.1	PPE, intangible or fixed asset (value/diminution)	4.3
Expense (payroll, SGA, other) recording	6.3	Depreciation, depletion, or amortization errors	4.3
Inventory, vendor, and/or cost of sales	5.8	Accounts/loans receivable, investments, and cash	4.0
Foreign, related-party, affiliated, or subsidiary	5.6	Other (e.g., leases, capitalization of expenditures, pensions, investments, derivatives, gain/loss recognition, debt/equity classifications, and cash flow statement classifications)	8.8
Deferred, stock-based, and/or executive compensation	5.6		
Debt, quasi-debt, warrants, and equity (BCF) security	5.3		

Although the percentage of companies reporting material changes or errors is small, readers of financial statements still must be careful. The reason: The amounts in the financial statements may have changed due to changing accounting principles and/or restatements. The chart below indicates the recent trends in restatements.

There is much good news in the chart. In 2007, restatements declined by 31 percent (from 1,842 to 1,271). In 2008, restatements declined another 22 percent (from 1,271 to 993). The declining trend continued in 2009, with restatements stabilized slightly below prefinancial-crisis levels in 2010 through 2014. However, investors can be in the dark when a company has an error that requires restatement. It may take some time for companies to sort out the source of an error, prepare corrected statements, and get auditor sign-off. Recent data indicate it takes on average about 3 months to resolve a restatement. The following table reports the range of periods when investors are in the dark due to a restatement.

Time to File Restated Financial Statements	% of All Restatements
Up to 3 Months	77%
3–9 Months	11
Greater than 9 Months	12

While most companies (77%) resolve their errors within 3 months, 12 percent (or over 200 companies) take more than 9 months to file corrected statements.

These lengthy “dark periods” have caught the attention of policy-setters and were a topic of discussion of the Committee for Improvements in Financial Reporting (CIFR). As one member of CIFR noted, “The dark period is bad for users.” As a result, the committee is proposing that for some errors, companies might not need to go through the pain of restatement, but enhanced disclosures about errors are needed.

Burks, “Accounting Restatements and the Timeliness of Disclosures,” *Accounting Horizons* (December 2011), pp. 609–629. Accounting change and restatement data from *2014 Financial Restatements: A Fourteen Year Comparison*, Audit Analytics (April 2015).

PREVIEW OF CHAPTER 22 As our opening story indicates, changes in accounting principles and errors in financial information have persisted in recent years and can leave investors in the dark. When these changes occur, companies must follow specific accounting and reporting requirements. In addition, to ensure comparability among companies, the FASB has standardized reporting of accounting changes, accounting estimates, error corrections, and related earnings per share information. In this chapter, we discuss these reporting standards, which help investors better understand a company’s financial condition. The content and organization of the chapter are as follows.

This chapter also includes numerous conceptual and international discussions that are integral to the topics presented here.

ACCOUNTING CHANGES AND ERROR ANALYSIS

REVIEW AND PRACTICE

Go to the REVIEW AND PRACTICE section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

LEARNING OBJECTIVE 1

Identify types of accounting changes and understand the accounting for changes in accounting principles.

See the FASB Codification References (page 1325).

UNDERLYING CONCEPTS

While changes in accounting may enhance the qualitative characteristic of *usefulness*, these changes may adversely affect the enhancing characteristics of *comparability* and *consistency*.

ACCOUNTING CHANGES**Background**

Accounting alternatives diminish the comparability of financial information between periods and between companies; they also obscure useful historical trend data. For example, if **Ford** revises its estimates for equipment useful lives, depreciation expense for the current year will not be comparable to depreciation expense reported by Ford in prior years. Similarly, if **OfficeMax** changes to FIFO inventory pricing while **Staples** uses LIFO, it will be difficult to compare these companies' reported results. A reporting framework helps preserve comparability when there is an accounting change.

The FASB has established a reporting framework, which involves three types of accounting changes. [1] The three types of accounting changes are:

1. **Change in accounting principle.** A change from one generally accepted accounting principle to another one. For example, a company may change its inventory valuation method from LIFO to average-cost.
2. **Change in accounting estimate.** A change that occurs as the result of new information or additional experience. For example, a company may change its estimate of the useful lives of depreciable assets.
3. **Change in reporting entity.** A change from reporting as one type of entity to another type of entity. As an example, a company might change the subsidiaries for which it prepares consolidated financial statements.

A fourth category necessitates changes in accounting, though it is not classified as an accounting change.

4. **Errors in financial statements.** Errors result from mathematical mistakes, mistakes in applying accounting principles, or oversight or misuse of facts that existed when preparing the financial statements. For example, a company may incorrectly apply the retail inventory method for determining its final inventory value.

The FASB classifies changes in these categories because each category involves different methods of recognizing changes in the financial statements. In this chapter, we discuss these classifications. We also explain how to report each item in the accounts and how to disclose the information in comparative statements.

Changes in Accounting Principle

By definition, a **change in accounting principle** involves a change from one generally accepted accounting principle to another. For example, a company might change the basis of inventory pricing from average-cost to LIFO. Or, it might change its method of revenue recognition for long-term construction contracts from the completed-contract to the percentage-of-completion method.

Companies must carefully examine each circumstance to ensure that a change in principle has actually occurred. **Adoption of a new principle** in recognition of events that have occurred for the first time or that were previously immaterial is not an accounting change. For example, a change in accounting principle has not occurred when a company adopts an inventory method (e.g., FIFO) for **newly** acquired items of inventory, even if FIFO differs from that used for **previously recorded** inventory. Another example is certain marketing expenditures that were previously immaterial and expensed in the period incurred. It would not be considered a change in

accounting principle if they become material and so may be acceptably deferred and amortized.

Finally, what if a company previously followed an accounting principle that was not acceptable? Or what if the company applied a principle incorrectly? In such cases, the profession considers a change to a generally accepted accounting principle a **correction of an error**. For example, a switch from the cash (income tax) basis of accounting to the accrual basis is a correction of an error. Or, if a company deducted salvage value when computing double-declining depreciation on plant assets and later recomputed depreciation without deducting estimated salvage value, it has corrected an error.

There are three possible approaches for reporting changes in accounting principles:

1. **Report changes currently.** In this approach, companies report the cumulative effect of the change in the current year's income statement as an irregular item. The **cumulative effect** is the difference in prior years' income between the newly adopted and prior accounting method. Under this approach, the effect of the change on prior years' income appears only in the current-year income statement. The company does not change **prior year financial statements**.

Advocates of this position argue that changing prior years' financial statements results in a loss of confidence in financial reports. How do investors react when told that the earnings computed three years ago are now entirely different? Changing prior periods, if permitted, also might upset contractual arrangements based on the old figures. For example, profit-sharing arrangements computed on the old basis might have to be recomputed and completely new distributions made, creating numerous legal problems. Many practical difficulties also exist. The cost of changing prior period financial statements may be excessive, or determining the amount of the prior period effect may be impossible on the basis of available data.

2. **Report changes retrospectively.** **Retrospective application** refers to the application of a different accounting principle to recast previously issued financial statements—as if the new principle had always been used. In other words, the company “goes back” and adjusts **prior years' statements** on a basis consistent with the newly adopted principle. The company shows any cumulative effect of the change as an adjustment to beginning retained earnings of the earliest year presented.

Advocates of this position argue that retrospective application ensures comparability. Think for a moment what happens if this approach is not used. The year *previous* to the change will be on the old method, the year *of the change* will report the entire cumulative adjustment, and the *following* year will present financial statements on the new basis without the cumulative effect of the change. Such lack of consistency fails to provide meaningful earnings-trend data and other financial relationships necessary to evaluate the business.

3. **Report changes prospectively (in the future).** In this approach, previously reported results remain. As a result, companies do not adjust opening balances to reflect the change in principle. Advocates of this position argue that once management presents financial statements based on acceptable accounting principles, they are final. Management cannot change prior periods by adopting a new principle. According to this line of reasoning, the current-period cumulative adjustment is not appropriate because that approach includes amounts that have little or no relationship to the current year's income or economic events.

Given these three possible approaches, which does the accounting profession prefer? The FASB **requires that companies use the retrospective approach**. Why? Because it provides financial statement users with more useful information than the cumulative-effect or prospective approaches. **[2]** The rationale is that changing the

INTERNATIONAL PERSPECTIVE

IFRS (IAS 8) generally requires retrospective application to prior years for accounting changes. However, IAS 8 permits the prospective method if a company cannot reasonably determine the amounts to which to restate prior periods.

prior statements to be on the same basis as the newly adopted principle results in greater consistency across accounting periods. Users can then better compare results from one period to the next.¹

WHAT DO THE NUMBERS MEAN?

QUITE A CHANGE

The cumulative-effect approach results in a loss of comparability. Also, reporting the cumulative adjustment in the period of the change can significantly affect net income, resulting in a misleading income figure. For example, at one time **Chrysler Corporation** changed its inventory accounting from LIFO to FIFO. If Chrysler had used the cumulative-effect approach, it would have reported a \$53,500,000 adjustment to net income. That adjustment would have resulted in net income of \$45,900,000, instead of a net loss of \$7,600,000.

A second case: In the early 1980s, the railroad industry switched from the retirement-replacement method of

depreciating railroad equipment to more generally used methods such as straight-line depreciation. Using cumulative treatment, railroad companies would have made substantial adjustments to income in the period of change. Many in the industry argued that including such large cumulative-effect adjustments in the current year would distort the information and make it less useful.

Such situations lend support to retrospective application so that comparability is maintained.

Retrospective Accounting Change Approach

A presumption exists that once a company adopts an accounting principle, it should not change. That presumption is understandable, given the idea that consistent use of an accounting principle enhances the usefulness of financial statements. However, the environment continually changes, and companies change in response. Recent standards on such subjects as stock options, exchanges of nonmonetary assets, and revenue recognition indicate that changes in accounting principle will continue to occur.

When a company changes an accounting principle, it should report the change using retrospective application. In general terms, here is what it must do:

UNDERLYING CONCEPTS

Retrospective application contributes to comparability.

- 1. It adjusts its financial statements for each prior period presented.** Thus, financial statement information about prior periods is on the same basis as the new accounting principle.
- 2. It adjusts the carrying amounts of assets and liabilities as of the beginning of the first year presented.** By doing so, these accounts reflect the cumulative effect on periods prior to those presented of the change to the new accounting principle. The company also makes an offsetting adjustment to the opening balance of retained earnings or other appropriate component of stockholders' equity or net assets as of the beginning of the first year presented.

For example, assume that **Target** decides to change its inventory valuation method in 2017 from the retail inventory method (FIFO) to the retail inventory method (average-cost). It provides comparative information for 2015 and 2016 based on the new method. Target would adjust its assets, liabilities, and retained earnings for periods prior to 2015 and report these amounts in the 2015 financial statements, when it prepares comparative financial statements.

Retrospective Accounting Change: Long-Term Contracts. To illustrate the retrospective approach, assume that Denson Company has accounted for its income from long-term

¹Adoption of the retrospective approach contributes to international accounting convergence. As discussed throughout the textbook, the FASB and the IASB have collaborated to converge around high-quality solutions to resolve differences between GAAP and IFRS. By adopting the retrospective approach, which is the method used in IFRS, the FASB agreed that this approach is superior to the current approach.

construction contracts at a point in time using the completed-contract method. In 2017 as a result of adopting the new revenue standard, the company changed to recognizing revenue over time (percentage-of-completion method). Management believes this approach provides a more appropriate measure of the income earned. For tax purposes, the company uses the completed-contract method and plans to continue doing so in the future. (We assume a 40% enacted tax rate.)

Illustration 22-1 shows portions of three income statements for 2015–2017—for both the completed-contract and percentage-of-completion methods (2015 was Denson’s first year of operations in the construction business).

COMPLETED-CONTRACT METHOD			
DENSON COMPANY			
INCOME STATEMENT (PARTIAL)			
FOR THE YEARS ENDED DECEMBER 31			
	2015	2016	2017
Income before income tax	\$400,000	\$160,000	\$190,000
Income tax (40%)	160,000	64,000	76,000
Net income	<u>\$240,000</u>	<u>\$ 96,000</u>	<u>\$114,000</u>

PERCENTAGE-OF-COMPLETION METHOD			
DENSON COMPANY			
INCOME STATEMENT (PARTIAL)			
FOR THE YEARS ENDED DECEMBER 31			
	2015	2016	2017
Income before income tax	\$600,000	\$180,000	\$200,000
Income tax (40%)	240,000	72,000	80,000
Net income	<u>\$360,000</u>	<u>\$108,000</u>	<u>\$120,000</u>

ILLUSTRATION 22-1

Comparative Income Statements for Completed-Contract versus Percentage-of-Completion Methods

To record a change from the completed-contract to the percentage-of-completion method, we analyze the various effects, as Illustration 22-2 shows.

Year	Pretax Income from		Difference in Income		
	Percentage-of-Completion	Completed-Contract	Difference	Tax Effect 40%	Income Effect (net of tax)
Prior to 2016	\$600,000	\$400,000	\$200,000	\$80,000	\$120,000
In 2016	180,000	160,000	20,000	8,000	12,000
Total at beginning of 2017	<u>\$780,000</u>	<u>\$560,000</u>	<u>\$220,000</u>	<u>\$88,000</u>	<u>\$132,000</u>
Total in 2017	<u>\$200,000</u>	<u>\$190,000</u>	<u>\$ 10,000</u>	<u>\$ 4,000</u>	<u>\$ 6,000</u>

ILLUSTRATION 22-2

Data for Retrospective Change Example

The entry to record the change at the beginning of 2017 would be:

Construction in Process	220,000	
Deferred Tax Liability		88,000
Retained Earnings		132,000

The Construction in Process account increases by \$220,000 (as indicated in the first column under “Difference in Income” in Illustration 22-2). The credit to Retained Earnings of \$132,000 reflects the cumulative income effects prior to 2017 (third column under “Difference in Income” in Illustration 22-2). The company credits Retained Earnings because prior years’ income is closed to this account each year. The credit to Deferred Tax Liability represents the adjustment to prior years’ tax expense. The company now

recognizes that amount, \$88,000, as a tax liability for future taxable amounts. That is, in future periods, taxable income will be higher than book income as a result of current temporary differences. Therefore, Denson must report a deferred tax liability in the current year.

WHAT DO THE NUMBERS MEAN?

CHANGE MANAGEMENT

Halliburton offers a case study in the importance of good reporting of an accounting change. Note that Halliburton uses percentage-of-completion accounting for its long-term construction-services contracts. The SEC questioned the company about its change in accounting for disputed claims.

Prior to the year of the change, Halliburton took a very conservative approach to its accounting for disputed claims. That is, the company waited until all disputes were resolved before recognizing associated revenues. In contrast, in the year of the change, the company recognized revenue for disputed claims *before* their resolution, using estimates of amounts expected to be recovered. Such revenue and its related profit are more tentative and subject to possible later adjustment. The accounting method adopted is more aggressive than the company's former policy but is within the boundaries of GAAP.

It appears that the problem with Halliburton's accounting stems more from how the company handled its accounting

change than from the new method itself. That is, Halliburton did not provide in its annual report in the year of the change an explicit reference to its change in accounting method. In fact, rather than stating its new policy, the company simply deleted the sentence that described how it accounted for disputed claims. Then later, in its next year's annual report, the company stated its new accounting policy. Similar transparency concerns have been raised when companies, like **Hawthorn Bancshares**, did not provide sufficient explanation about their changes to fair value accounting for their mortgage servicing rights.

When companies make such changes in accounting, investors need to be informed about the change and about its effects on the financial results. With such information, investors and analysts can compare current results with those of prior periods and can make a more informed assessment about the company's future prospects.

Sources: Adapted from "Accounting Ace Charles Mulford Answers Accounting Questions," *Wall Street Journal Online* (June 7, 2002); and J. Arnold, B. Blisard, and J. Duggan, "Dealing with the Implications of Accounting Change," *FEI Magazine* (November 2012).

Reporting a Change in Principle. The disclosure of accounting changes is particularly important. Financial statement readers want consistent information from one period to the next. Such consistency ensures the usefulness of financial statements. The major disclosure requirements are as follows.

1. The nature of and reason for the change in accounting principle. This must include an explanation of why the newly adopted accounting principle is preferable.
2. The method of applying the change, and:
 - (a) A description of the prior period information that has been retrospectively adjusted, if any.
 - (b) The effect of the change on income from continuing operations, net income (or other appropriate captions of changes in net assets or performance indicators), any other affected line item, and any affected per share amounts for the current period and for any prior periods retrospectively adjusted.
 - (c) The cumulative effect of the change on retained earnings or other components of equity or net assets in the statement of financial position as of the beginning of the earliest period presented.²

To illustrate, Denson will prepare comparative financial statements for 2016 and 2017 using the percentage-of-completion method (the new construction accounting method). Illustration 22-3 indicates how Denson presents this information.

²Presentation of the effect on financial statement subtotals and totals other than income from continuing operations and net income (or other appropriate captions of changes in the applicable net assets or performance indicator) is not required. [3]

DENSON COMPANY		
INCOME STATEMENT (PARTIAL)		
FOR THE YEAR ENDED		
	2017	2016
		As Adjusted (Note A)
Income before income tax	\$200,000	\$180,000
Income tax (40%)	80,000	72,000
Net income	<u>\$120,000</u>	<u>\$108,000</u>

Note A: Change in Method of Accounting for Long-Term Contracts. The company has accounted for revenue and costs for long-term construction contracts by the percentage-of-completion method in 2017, whereas in all prior years, revenue and costs were determined by the completed-contract method. The new method of accounting for long-term contracts was adopted to recognize . . . [state justification for change in accounting principle] . . . and financial statements of prior years have been restated to apply the new method retrospectively. For income tax purposes, the completed-contract method has been continued. The effect of the accounting change on income of 2017 was an increase of \$6,000 net of related taxes and on income of 2016 as previously reported was an increase of \$12,000 net of related taxes. The balances of retained earnings for 2016 and 2017 have been adjusted for the effect of applying retrospectively the new method of accounting. As a result of the accounting change, retained earnings as of January 1, 2016, increased by \$120,000 compared to that reported using the completed-contract method.

ILLUSTRATION 22-3

Comparative Information
Related to Accounting
Change (Percentage-of-
Completion)

As Illustration 22-3 shows, Denson Company reports net income under the newly adopted percentage-of-completion method for both 2016 and 2017. The company retrospectively adjusted the 2016 income statement to report the information on a percentage-of-completion basis. Also, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected.

In addition, companies are required to provide data on important differences between the amounts reported under percentage-of-completion versus completed-contract. When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between percentage-of-completion and completed-contract. However, most companies will show only line-by-line differences. For example, Denson would show the differences in construction in process, retained earnings, gross profit, and net income for 2016 and 2017 under the completed-contract and percentage-of-completion methods.

Retained Earnings Adjustment. As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings as of the beginning of the earliest period presented. For Denson Company, that date is January 1, 2016. Denson disclosed that information by means of a narrative description (see Note A in Illustration 22-3). Denson also would disclose this information in its retained earnings statement. Assuming a retained earnings balance of \$1,360,000 at the beginning of 2015, Illustration 22-4 shows Denson's retained earnings statement under the completed-contract method—that is, before giving effect to the change in accounting principle. (The income information comes from Illustration 22-1 on page 1271.)

DENSON COMPANY			
RETAINED EARNINGS STATEMENT			
FOR THE YEAR ENDED			
	2017	2016	2015
Retained earnings, January 1	\$1,696,000	\$1,600,000	\$1,360,000
Net income	114,000	96,000	240,000
Retained earnings, December 31	<u>\$1,810,000</u>	<u>\$1,696,000</u>	<u>\$1,600,000</u>

ILLUSTRATION 22-4

Retained Earnings
Statement before
Retrospective Change

If Denson presents comparative statements for 2016 and 2017 under percentage-of-completion, then it must change the beginning balance of retained earnings at

1274 Chapter 22 Accounting Changes and Error Analysis

January 1, 2016. The difference between the retained earnings balances under completed-contract and percentage-of-completion is computed as follows.

Retained earnings, January 1, 2016 (percentage-of-completion)	\$1,720,000
Retained earnings, January 1, 2016 (completed-contract)	(1,600,000)
Cumulative-effect difference	<u>\$ 120,000</u>

The \$120,000 difference is the cumulative effect. Illustration 22-5 shows a comparative retained earnings statement for 2016 and 2017, giving effect to the change in accounting principle to percentage-of-completion.

ILLUSTRATION 22-5
Retained Earnings
Statement after
Retrospective Application

DENSON COMPANY		
RETAINED EARNINGS STATEMENT		
FOR THE YEAR ENDED		
	<u>2017</u>	<u>2016</u>
Retained earnings, January 1, as reported	—	\$1,600,000
Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for construction contracts		<u>120,000</u>
Retained earnings, January 1, as adjusted	\$1,828,000	1,720,000
Net income	120,000	108,000
Retained earnings, December 31	<u>\$1,948,000</u>	<u>\$1,828,000</u>

Denson adjusted the beginning balance of retained earnings on January 1, 2016, for the excess of percentage-of-completion net income over completed-contract net income in 2015. This comparative presentation indicates the type of adjustment that a company needs to make. It follows that this adjustment could be much larger if a number of prior periods were involved.

Retrospective Accounting Change: Inventory Methods. As a second illustration of the retrospective approach, assume that Lancer Company has accounted for its inventory using the LIFO method. In 2017, the company changes to the FIFO method because management believes this approach provides a more appropriate reporting of its inventory costs. Illustration 22-6 provides additional information related to Lancer Company.

ILLUSTRATION 22-6
Lancer Company
Information

1. Lancer Company started its operations on January 1, 2015. At that time, stockholders invested \$100,000 in the business in exchange for common stock.			
2. All sales, purchases, and operating expenses for the period 2015–2017 are cash transactions. Lancer's cash flows over this period are as follows.			
	<u>2015</u>	<u>2016</u>	<u>2017</u>
Sales	\$300,000	\$300,000	\$300,000
Purchases	90,000	110,000	125,000
Operating expenses	<u>100,000</u>	<u>100,000</u>	<u>100,000</u>
Cash flow from operations	<u>\$110,000</u>	<u>\$ 90,000</u>	<u>\$ 75,000</u>
3. Lancer has used the LIFO method for financial reporting since its inception.			
4. Inventory determined under LIFO and FIFO for the period 2015–2017 is as follows.			
	<u>LIFO Method</u>	<u>FIFO Method</u>	<u>Difference</u>
January 1, 2015	\$ 0	\$ 0	\$ 0
December 31, 2015	10,000	12,000	2,000
December 31, 2016	20,000	25,000	5,000
December 31, 2017	32,000	39,000	7,000

5. Cost of goods sold under LIFO and FIFO for the period 2015–2017 are as follows.

	Cost of Goods Sold		Difference
	LIFO	FIFO	
2015	\$ 80,000	\$ 78,000	\$2,000
2016	100,000	97,000	3,000
2017	113,000	111,000	2,000

6. Earnings per share information is not required on the income statement.

7. All tax effects for this illustration should be ignored.

ILLUSTRATION 22-6

(Continued)

Given the information about Lancer Company, Illustration 22-7 shows its income statement, retained earnings statement, balance sheet, and statement of cash flows for 2015–2017 under LIFO.

ILLUSTRATION 22-7

Inventory (LIFO)	10,000	20,000	32,000
Total assets	\$220,000	\$320,000	\$407,000
Common stock	\$100,000	\$100,000	\$100,000
Retained earnings	120,000	220,000	307,000
Total liabilities and stockholders' equity	\$220,000	\$320,000	\$407,000

LANCER COMPANY
STATEMENT OF CASH FLOWS
FOR THE YEAR ENDED DECEMBER 31

	2015	2016	2017
Cash flows from operating activities			
Sales	\$300,000	\$300,000	\$300,000
Purchases	90,000	110,000	125,000
Operating expenses	100,000	100,000	100,000
Net cash provided by operating activities	110,000	90,000	75,000
Cash flows from financing activities			
Issuance of common stock	100,000	—	—
Net increase in cash	210,000	90,000	75,000
Cash at beginning of year	0	210,000	300,000
Cash at end of year	\$210,000	\$300,000	\$375,000

As Illustration 22-7 indicates, under LIFO Lancer Company reports \$120,000 net income in 2015, \$100,000 net income in 2016, and \$87,000 net income in 2017. The amount of inventory reported on Lancer's balance sheet reflects LIFO costing.

Illustration 22-8 shows Lancer's income statement, retained earnings statement, balance sheet, and statement of cash flows for 2015–2017 under FIFO. You can see that **the cash flow statement under FIFO is the same as under LIFO**. Although the net incomes are different in each period, there is no cash flow effect from these differences in net income. (If we considered income taxes, a cash flow effect would result.)

Cash at end of year	\$210,000	\$300,000	\$375,000

Compare the financial statements reported in Illustration 22-7 and Illustration 22-8. You can see that under retrospective application, the change to FIFO inventory valuation affects reported inventories, cost of goods sold, net income, and retained earnings. In the following sections, we discuss the accounting and reporting of Lancer's accounting change from LIFO to FIFO.

Given the information provided in Illustrations 22-6, 22-7, and 22-8, we now are ready to account for and report on the accounting change.

Our first step is to adjust the financial records for the change from LIFO to FIFO. To do so, we perform the analysis in Illustration 22-9.

Year	Net Income		Difference in Income
	LIFO	FIFO	
2015	\$120,000	\$122,000	\$2,000
2016	100,000	103,000	3,000
Total at beginning of 2017	<u>\$220,000</u>	<u>\$225,000</u>	<u>\$5,000</u>
Total in 2017	<u>\$ 87,000</u>	<u>\$ 89,000</u>	<u>\$2,000</u>

ILLUSTRATION 22-9
Data for Recording Change in Accounting Principle

The entry to record the change to the FIFO method at the beginning of 2017 is as follows.

Inventory	5,000	
Retained Earnings		5,000

The change increases the Inventory account by \$5,000. This amount represents the difference between the ending inventory at December 31, 2016, under LIFO (\$20,000) and the ending inventory under FIFO (\$25,000). The credit to Retained Earnings indicates the amount needed to change the prior year's income, assuming that Lancer had used FIFO in previous periods.

Reporting a Change in Principle. Lancer Company will prepare comparative financial statements for 2016 and 2017 using FIFO (the new inventory method). Illustration 22-10 indicates how Lancer might present this information.

LANCER COMPANY INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31						
	2017			2016 As adjusted (Note A)		
Sales	\$300,000			\$300,000		
Cost of goods sold	111,000			97,000		
Operating expenses	100,000			100,000		
Net income	<u>\$ 89,000</u>			<u>\$103,000</u>		

Note A
Change in Method of Accounting for Inventory Valuation On January 1, 2017, Lancer Company elected to change its method of valuing its inventory to the FIFO method; in all prior years, inventory was valued using the LIFO method. The Company adopted the new method of accounting for inventory to better report cost of goods sold in the year incurred. Comparative financial statements of prior years have been adjusted to apply the new method retrospectively. The following financial statement line items for years 2017 and 2016 were affected by the change in accounting principle.

	2017			2016		
	LIFO	FIFO	Difference	LIFO	FIFO	Difference
Balance Sheet						
Inventory	\$ 32,000	\$ 39,000	\$7,000	\$ 20,000	\$ 25,000	\$5,000
Retained earnings	307,000	314,000	7,000	220,000	225,000	5,000
Income Statement						
Cost of goods sold	\$113,000	\$111,000	\$2,000	\$100,000	\$ 97,000	\$3,000
Net income	87,000	89,000	2,000	100,000	103,000	3,000
Statement of Cash Flows						
(no effect)						

As a result of the accounting change, retained earnings as of January 1, 2016, increased from \$120,000, as originally reported using the LIFO method, to \$122,000 using the FIFO method.

ILLUSTRATION 22-10
Comparative Information Related to Accounting Change (FIFO)

Nature and reason for change; description of prior period information adjusted

Effect of change on key performance indicators

Cumulative effect on retained earnings

As Illustration 22-10 shows, Lancer Company reports net income under the newly adopted FIFO method for both 2016 and 2017. The company retrospectively adjusted the 2016 income statement to report the information on a FIFO basis. In addition, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected. The note also provides data on important differences between the amounts reported under LIFO versus FIFO. (When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between LIFO and FIFO.)

Retained Earnings Adjustment. As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings as of the beginning of the earliest period presented. For Lancer Company, that date is January 1, 2016. Lancer disclosed that information by means of a narrative description (see Note A in Illustration 22-10). Lancer also would disclose this information in its retained earnings statement. Illustration 22-11 shows Lancer's retained earnings statement under LIFO—that is, before giving effect to the change in accounting principle. (This information comes from Illustration 22-7 on page 1275.)

ILLUSTRATION 22-11

Retained Earnings
Statements (LIFO)

	2017	2016	2015
Retained earnings, January 1	\$220,000	\$120,000	\$ 0
Net income	87,000	100,000	120,000
Retained earnings, December 31	<u>\$307,000</u>	<u>\$220,000</u>	<u>\$120,000</u>

If Lancer presents comparative statements for 2016 and 2017 under FIFO, then it must change the beginning balance of retained earnings at January 1, 2016. The difference between the retained earnings balances under LIFO and FIFO is computed as follows.

Retained earnings, January 1, 2016 (FIFO)	\$122,000
Retained earnings, January 1, 2016 (LIFO)	(120,000)
Cumulative effect difference	<u>\$ 2,000</u>

The \$2,000 difference is the cumulative effect. Illustration 22-12 shows a comparative retained earnings statement for 2016 and 2017, giving effect to the change in accounting principle to FIFO.

ILLUSTRATION 22-12

Retained Earnings
Statements after
Retrospective Application

	2017	2016
Retained earnings, January 1, as reported		\$120,000
Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for inventory		<u>2,000</u>
Retained earnings, January 1, as adjusted	\$225,000	122,000
Net income	89,000	103,000
Retained earnings, December 31	<u>\$314,000</u>	<u>\$225,000</u>

Lancer adjusted the beginning balance of retained earnings on January 1, 2016, for the excess of FIFO net income over LIFO net income in 2015. This comparative

presentation indicates the type of adjustment that a company needs to make. It follows that the amount of this adjustment could be much larger if a number of prior periods were involved.

Direct and Indirect Effects of Changes

Are there other effects that a company should report when it makes a change in accounting principle? For example, what happens when a company like Lancer has a bonus plan based on net income and the prior year's net income changes when FIFO is retrospectively applied? Should Lancer also change the reported amount of bonus expense? Or what happens if we had not ignored income taxes in the Lancer example? Should Lancer adjust net income, given that taxes will be different under LIFO and FIFO in prior periods? The answers depend on whether the effects are direct or indirect.

Direct Effects. The FASB takes the position that companies should retrospectively apply the **direct effects of a change in accounting principle**. An example of a **direct effect** is an adjustment to an inventory balance as a result of a change in the inventory valuation method. For example, Lancer Company should change the inventory amounts in prior periods to indicate the change to the FIFO method of inventory valuation. Another inventory-related example would be an impairment adjustment resulting from applying the lower-of-cost-or-net realizable value or the lower-of-cost-or-market test to the adjusted inventory balance. Related changes, such as deferred income tax effects of the impairment adjustment, are also considered direct effects. This entry was illustrated in the Denson example, in which the change to percentage-of-completion accounting resulted in recording a deferred tax liability.

Indirect Effects. In addition to direct effects, companies can have **indirect effects related to a change in accounting principle**. An **indirect effect** is any change to current or future cash flows of a company that results from making a change in accounting principle that is applied retrospectively. An example of an indirect effect is a change in profit-sharing or royalty payment that is based on a reported amount such as revenue or net income. **Indirect effects do not change prior period amounts.**

For example, let's assume that Lancer has an employee profit-sharing plan based on net income. As Illustration 22-9 showed (on page 1277), Lancer would report higher income in 2015 and 2016 if it used the FIFO method. In addition, let's assume that the profit-sharing plan requires that Lancer pay the incremental amount due based on the FIFO income amounts. In this situation, Lancer reports this additional expense **in the current period**; it would not change prior periods for this expense. If the company prepares comparative financial statements, it follows that it does not recast the prior periods for this additional expense.³

If the terms of the profit-sharing plan indicate that *no payment is necessary* in the current period due to this change, then the company need not recognize additional profit-sharing expense in the current period. Neither does it change amounts reported for prior periods.

When a company recognizes the indirect effects of a change in accounting principle, it includes in the financial statements a description of the indirect effects. In doing so, it discloses the amounts recognized in the current period and related per share information.

INTERNATIONAL PERSPECTIVE

IFRS does not explicitly address the accounting and disclosure of indirect effects.

³The rationale for this approach is that companies should recognize, in the period the adoption occurs (not the prior period), the effect on the cash flows that is caused by the adoption of the new accounting principle. That is, the accounting change is a necessary "past event" in the definition of an asset or liability that gives rise to the accounting recognition of the indirect effect in the current period. [4]

Impracticability

It is not always possible for companies to determine how they would have reported prior periods' financial information under retrospective application of an accounting principle change. Retrospective application is considered **impracticable** if a company cannot determine the prior period effects using every reasonable effort to do so.

Companies should not use retrospective application if one of the following conditions exists:

1. The company cannot determine the effects of the retrospective application.
2. Retrospective application requires assumptions about management's intent in a prior period.
3. Retrospective application requires significant estimates for a prior period, and the company cannot objectively verify the necessary information to develop these estimates.

If any of the above conditions exists, it is deemed impracticable to apply the retrospective approach. In this case, the company **prospectively applies** the new accounting principle as of the earliest date it is practicable to do so. [5]

For example, assume that Williams Company changed its inventory method from FIFO to LIFO, effective January 1, 2018. Williams prepares statements on a calendar-year basis and has used the FIFO method since its inception. Williams judges it impracticable to retrospectively apply the new method. This is generally the case for this change in principle because determining prior period effects would require subjective assumptions about the LIFO layers established in prior periods. These assumptions would ordinarily result in the computation of a number of different earnings figures.

As a result, the only adjustment necessary may be to restate the beginning inventory to a cost basis from a lower-of-cost-or-market approach (which establishes the beginning LIFO layer). Williams must disclose only the effect of the change on the results of operations in the period of change. Also, the company should explain the reasons for omitting the computations of the cumulative effect for prior years. Finally, it should disclose the justification for the change to LIFO. [6]⁴ Illustration 22-13, from the annual report of **The Quaker Oats Company**, shows the type of disclosure needed.

ILLUSTRATION 22-13

Disclosure of Change to LIFO

The Quaker Oats Company

Note 1 (In Part): Summary of Significant Accounting Policies

Inventories. Inventories are valued at the lower of cost or market, using various cost methods, and include the cost of raw materials, labor and overhead. The percentage of year-end inventories valued using each of the methods is as follows:

	June 30	Current Year	Prior Year
Average quarterly cost		21%	54%
Last-in, first-out (LIFO)		65%	29%
First-in, first-out (FIFO)		14%	17%

Effective July 1, the Company adopted the LIFO cost flow assumption for valuing the majority of remaining U.S. Grocery Products inventories. The Company believes that the use of the LIFO method better matches current costs with current revenues. The cumulative effect of this change on retained earnings at the beginning of the year is not determinable, nor are the pro-forma effects of retroactive application of LIFO to prior years. The effect of this change on current-year fiscal results was to decrease net income by \$16.0 million, or \$.20 per share.

If the LIFO method of valuing certain inventories were not used, total inventories would have been \$60.1 million higher in the current year, and \$24.0 million higher in the prior year.

⁴In practice, many companies defer the formal adoption of LIFO until year-end. Management thus has an opportunity to assess the impact that a change to LIFO will have on the financial statements and to evaluate the desirability of a change for tax purposes. As indicated in Chapter 8, many companies use LIFO because of the advantages of this inventory valuation method in a period of inflation.

OTHER ACCOUNTING CHANGES

Changes in Accounting Estimates

To prepare financial statements, companies must estimate the effects of future conditions and events. For example, the following items require estimates.

1. Uncollectible receivables.
2. Inventory obsolescence.
3. Useful lives and salvage values of assets.
4. Periods benefited by deferred costs.
5. Liabilities for warranty costs and income taxes.
6. Recoverable mineral reserves.
7. Change in depreciation methods.

A company cannot perceive future conditions and events and their effects with certainty. Therefore, estimation requires the exercise of judgment. Accounting estimates will change as new events occur, as a company acquires more experience, or as it obtains additional information.

Prospective Reporting

Companies report prospectively **changes in accounting estimates**. That is, companies should not adjust previously reported results for changes in estimates. Instead, they account for the effects of all changes in estimates in (1) the period of change if the change affects that period only, or (2) the period of change and future periods if the change affects both. The FASB views changes in estimates as **normal recurring corrections and adjustments**, the natural result of the accounting process. It prohibits retrospective treatment.

The circumstances related to a change in estimate differ from those for a change in accounting principle. If companies reported changes in estimates retrospectively, continual adjustments of prior years' income would occur. It seems proper to accept the view that, because new conditions or circumstances exist, the revision fits the new situation (not the old one). Companies should therefore handle such a revision in the current and future periods.

To illustrate, Underwriters Labs Inc. purchased for \$300,000 a building that it originally estimated to have a useful life of 15 years and no salvage value. It recorded depreciation for 5 years on a straight-line basis. On January 1, 2017, Underwriters Labs revises the estimate of the useful life. It now considers the asset to have a total life of 25 years. (Assume that the useful life for financial reporting and tax purposes and depreciation method are the same.) Illustration 22-14 shows the accounts at the beginning of the sixth year.

Buildings	\$300,000
Less: Accumulated depreciation—buildings (5 × \$20,000)	100,000
Book value of building	<u>\$200,000</u>

ILLUSTRATION 22-14

Book Value after Five
Years' Depreciation

Underwriters Labs records depreciation for the year 2017 as follows.

Depreciation Expense	10,000	
Accumulated Depreciation—Buildings		10,000

The company computes the \$10,000 depreciation charge as shown in Illustration 22-15.

$$\text{Depreciation Charge} = \frac{\text{Book Value of Asset}}{\text{Remaining Service Life}} = \frac{\$200,000}{25 \text{ years} - 5 \text{ years}} = \$10,000$$

ILLUSTRATION 22-15

Depreciation after
Change in Estimate

Companies sometime find it difficult to differentiate between a change in estimate and a change in accounting principle. Is it a change in principle or a change in estimate when a company changes from deferring and amortizing marketing costs to expensing them as incurred because future benefits of these costs have become doubtful? If it is impossible to determine whether a change in principle or a change in estimate has occurred, the rule is this: **Consider the change as a change in estimate.** This is often referred to as a **change in estimate effected by a change in accounting principle.**

Another example of a change in estimate effected by a change in principle is a change in depreciation (as well as amortization or depletion) methods. Because companies change depreciation methods based on changes in estimates about future benefits from long-lived assets, it is not possible to separate the effect of the accounting principle change from that of the estimates. **As a result, companies account for a change in depreciation methods as a change in estimate effected by a change in accounting principle. [7]**

A similar problem occurs in differentiating between a change in estimate and a correction of an error, although here the answer is more clear-cut. How does a company determine whether it overlooked the information in earlier periods (an error), or whether it obtained new information (a change in estimate)? Proper classification is important because the accounting treatment differs for corrections of errors versus changes in estimates. The general rule is this: **Companies should consider careful estimates that later prove to be incorrect as changes in estimate.** Only when a company obviously computed the estimate incorrectly because of lack of expertise or in bad faith should it consider the adjustment an error. There is no clear demarcation line here. Companies must use good judgment in light of all the circumstances.⁵

Disclosures

Illustration 22-16 shows disclosure of a change in estimated useful lives, which appeared in the annual report of **Ampco-Pittsburgh Corporation.**

ILLUSTRATION 22-16

Disclosure of Change in
Estimated Useful Lives

Ampco-Pittsburgh Corporation

Note 11: Change in Accounting Estimate. The Corporation revised its estimate of the useful lives of certain machinery and equipment. Previously, all machinery and equipment, whether new when placed in use or not, were in one class and depreciated over 15 years. The change principally applies to assets purchased new when placed in use. Those lives are now extended to 20 years. These changes were made to better reflect the estimated periods during which such assets will remain in service. The change had the effect of reducing depreciation expense and increasing net income by approximately \$991,000 (\$.10 per share).

For the most part, companies need not disclose changes in accounting estimates made as part of normal operations, such as bad debt allowances or inventory obsolescence, unless such changes are material. However, for a change in estimate that affects several periods (such as a change in the service lives of depreciable assets), companies should disclose the effect on income from continuing operations and related per share

⁵In evaluating reasonableness, the auditor should use one or a combination of the following approaches.

- (a) Review and test the process used by management to develop the estimate.
- (b) Develop an independent expectation of the estimate to corroborate the reasonableness of management's estimate.
- (c) Review subsequent events or transactions occurring prior to completion of fieldwork.

See "Auditing Accounting Estimates," *Statement on Auditing Standards No. 57* (New York: AICPA, 1988).

amounts of the current period. When a company has a change in estimate effected by a change in accounting principle, it must indicate why the new method is preferable. In addition, companies are subject to all other disclosure guidelines established for changes in accounting principle.

WHAT DO THE NUMBERS MEAN?

A CHANGE FOR THE BETTER?

As we have discussed, changes in accounting estimates are expected in any given year, as conditions change. The following

table indicates the five most common changes in accounting estimates in a recent year for a sampling of 2,000 large companies.

Five Most Common Changes in Accounting Estimates	2014
Revenue (percentage-of-completion)	120
Depreciation, amortization, and depletion	54
Other revenue recognition	25
Tax expense (deferred taxes and valuation allowance)	35
Stock-based compensation (vesting and valuation estimates)	18

The hope is that management changes accounting estimates in order to make the financial statements more useful. However, the following chart indicates that in each of the past eight

years, the result of the accounting estimate change was an increase in income.

It appears that management may be making changes in estimates in order to make financial results look better, not

more useful. If so, this violates the concept of neutrality.

Source: Accounting change and restatement data from *2014 Financial Restatements: A Fourteen Year Comparison*, Audit Analytics (April 2015).

Changes in Reporting Entity

Occasionally, companies make changes that result in different reporting entities. In such cases, companies report the change by **changing the financial statements of all prior periods presented**. The revised statements show the financial information for the **new reporting entity** for all periods.

Examples of a change in reporting entity are:

1. Presenting consolidated statements in place of statements of individual companies.
2. Changing specific subsidiaries that constitute the group of companies for which the entity presents consolidated financial statements.
3. Changing the companies included in combined financial statements.
4. Changing the cost, equity, or consolidation method of accounting for subsidiaries and investments.⁶ In this case, a change in the reporting entity does not result from creation, cessation, purchase, or disposition of a subsidiary or other business unit.

In the year in which a company changes a reporting entity, it should disclose in the financial statements the nature of the change and the reason for it. It also should report, for all periods presented, the effect of the change on income from continuing operations, net income, and earnings per share. These disclosures need not be repeated in subsequent periods' financial statements.

Illustration 22-17 shows a note disclosing a change in reporting entity, from the annual report of **Hewlett-Packard Company**.

ILLUSTRATION 22-17
Disclosure of Change in
Reporting Entity

Hewlett-Packard Company

Note: Accounting and Reporting Changes (In Part)

Consolidation of Hewlett-Packard Finance Company. The company implemented a new accounting pronouncement on consolidations. With the adoption of this new pronouncement, the company consolidated the accounts of Hewlett-Packard Finance Company (HPFC), a wholly owned subsidiary previously accounted for under the equity method, with those of the company. The change resulted in an increase in consolidated assets and liabilities but did not have a material effect on the company's financial position. Since HPFC was previously accounted for under the equity method, the change did not affect net earnings. Prior years' consolidated financial information has been restated to reflect this change for comparative purposes.

LEARNING OBJECTIVE 3

Describe the accounting for correction of errors.

ACCOUNTING ERRORS

No business, large or small, is immune from errors. As the opening story discusses, the number of accounting errors that lead to restatement have stabilized in recent years. However, without accounting and disclosure guidelines for the reporting of errors, investors can be left in the dark about the effects of errors.

Certain errors, such as misclassifications of balances within a financial statement, are not as significant to investors as other errors. Significant errors would be those resulting in overstating assets or income, for example. However, investors should know the potential impact of all errors. Even "harmless" misclassifications can affect important ratios. Also, some errors could signal important weaknesses in internal controls that could lead to more significant errors.

In general, accounting errors include the following types:

1. A change from an accounting principle that is **not** generally accepted to an accounting principle that is acceptable. The rationale is that the company incorrectly presented prior periods because of the application of an improper accounting principle. For example, a company may change from the cash (income tax) basis of accounting to the accrual basis.

⁶An exception to retrospective application occurs when changing from the equity method. We provide an expanded illustration of the accounting for a change from or to the equity method in Appendix 22A.

2. Mathematical mistakes, such as incorrectly totaling the inventory count sheets when computing the inventory value.
3. Changes in estimates that occur because a company did not prepare the estimates in good faith. For example, a company may have adopted a clearly unrealistic depreciation rate.
4. An oversight, such as the failure to accrue or defer certain expenses and revenues at the end of the period.
5. A misuse of facts, such as the failure to use salvage value in computing the depreciation base for the straight-line approach.
6. The incorrect classification of a cost as an expense instead of an asset, and vice versa.

Accounting errors occur for a variety of reasons. Illustration 22-18 indicates 11 major categories of accounting errors that drive restatements.

ILLUSTRATION 22-18
Accounting-Error Types

Accounting Category	Type of Restatement
Expense recognition	Recording expenses in the incorrect period or for an incorrect amount.
Revenue recognition	Improper revenue accounting. This category includes instances in which revenue was improperly recognized, questionable revenues were recognized, or any other number of related errors that led to misreported revenue.
Misclassification	Misclassifying significant accounting items on the balance sheet, income statement, or statement of cash flows. These include restatements due to misclassification of short- or long-term accounts or those that impact cash flows from operations.
Equity—other	Improper accounting for EPS, restricted stock, warrants, and other equity instruments.
Allowances/contingencies	Errors involving bad debts related to accounts receivable, inventory reserves, income tax allowances, and loss contingencies.
Long-lived assets	Asset impairments of property, plant, and equipment; goodwill; or other related items.
Taxes	Errors involving correction of tax provision, improper treatment of tax liabilities, and other tax-related items.
Equity—other comprehensive income	Improper accounting for comprehensive income equity transactions including foreign currency items, unrealized gains and losses on certain investments in debt, equity securities, and derivatives.
Inventory	Inventory costing valuations, quantity issues, and cost of sales adjustments.
Equity—stock options	Improper accounting for employee stock options.
Other	Any restatement not covered by the listed categories including those related to improper accounting for acquisitions or mergers.

As soon as a company discovers an error, it must correct the error. Companies record **corrections of errors** from prior periods as an adjustment to the beginning balance of retained earnings in the current period. Such corrections are called **prior period adjustments**.⁷ [8]

If it presents comparative statements, a company should restate the prior statements affected, to correct for the error.⁸ The company need not repeat the disclosures in the financial statements of subsequent periods.

⁷See Mark L. Defond and James Jambalvo, "Incidence and Circumstances of Accounting Errors," *The Accounting Review* (July 1991) for examples of different types of errors and why these errors might have occurred.

⁸The term **restatement** is used for the process of revising previously issued financial statements to reflect the correction of an error. This distinguishes an error correction from a change in accounting principle. [9]

WHAT DO THE NUMBERS MEAN?

When companies report restatements, investors usually lose money. What should investors do if a company misleads them by misstating its financial results? Join other investors in a class-action suit against the company and in some cases, the auditor.

Company	Settlement Amount	Contact for Claim
Western Union	\$133 million	www.lawyersandsettlements.com
Bank of America	\$2.4 billion	www.lawyersandsettlements.com
Southwest	\$1.8 million	www.lawyersandsettlements.com

The amounts reported are *before* attorney's fees, which can range from 15 to 30 percent of the total. Also, investors may owe taxes if the settlement results in a capital gain on the

Class-action activity has picked up in recent years, and settlements can be large. To find out about class actions, investors can go online to see if they are eligible to join any class actions. Below are some recent examples.

investment. Thus, investors can get back some of the money they lost due to restatements, but they should be prepared to pay an attorney and the government first.

Example of Error Correction

To illustrate, in 2018 the bookkeeper for Selectro Company discovered an error. In 2017, the company failed to record \$20,000 of depreciation expense on a newly constructed building. This building is the only depreciable asset Selectro owns. The company correctly included the depreciation expense in its tax return and correctly reported its income taxes payable. Illustration 22-19 presents Selectro's income statement for 2017 (starting with income before depreciation expense) with and without the error.

ILLUSTRATION 22-19

Error Correction
Comparison

SELECTRO COMPANY				
INCOME STATEMENT				
FOR THE YEAR ENDED, DECEMBER 31, 2017				
		Without Error		With Error
Income before depreciation expense		\$100,000		\$100,000
Depreciation expense		20,000		–0–
Income before income tax		80,000		100,000
Current income tax expense	\$32,000		\$32,000	
Deferred income tax expense	–0–	32,000	8,000	40,000
Net income		<u>\$ 48,000</u>		<u>\$ 60,000</u>

Illustration 22-20 shows the entries that Selectro should have made and did make for recording depreciation expense and income taxes.

ILLUSTRATION 22-20

Error Entries

Entries Company Should Have Made (Without Error)			Entries Company Did Make (With Error)		
Depreciation Expense	20,000		No entry made for depreciation		
Accumulated Depreciation—					
Buildings		20,000			
Income Tax Expense	32,000		Income Tax Expense	40,000	
Income Taxes Payable		32,000	Deferred Tax Liability		8,000
			Income Taxes Payable		32,000

As Illustration 22-20 indicates, the \$20,000 omission error in 2017 results in the following effects.

Income Statement Effects

Depreciation expense (2017) is understated \$20,000.
 Income tax expense (2017) is overstated \$8,000 ($\$20,000 \times 40\%$).
 Net income (2017) is overstated \$12,000 ($\$20,000 - \$8,000$).

Balance Sheet Effects

Accumulated depreciation—buildings is understated \$20,000.
 Deferred tax liability is overstated \$8,000 ($\$20,000 \times 40\%$).

To make the proper correcting entry in 2018, Selectro should recognize that net income in 2017 is overstated by \$12,000, the Deferred Tax Liability is overstated by \$8,000, and Accumulated Depreciation—Buildings is understated by \$20,000. The entry to correct this error in 2018 is as follows.

Retained Earnings	12,000	
Deferred Tax Liability	8,000	
Accumulated Depreciation—Buildings		20,000

The debit to Retained Earnings results because net income for 2017 is overstated. The debit to Deferred Tax Liability is made to remove this account, which was caused by the error. The credit to Accumulated Depreciation—Buildings reduces the book value of the building to its proper amount. Selectro will make the same journal entry to record the correction of the error in 2018 whether it prepares single-period (noncomparative) or comparative financial statements.

Single-Period Statements

To demonstrate how to show this information in a single-period statement, assume that Selectro Company has a beginning retained earnings balance at January 1, 2018, of \$350,000. The company reports net income of \$400,000 in 2018. Illustration 22-21 shows Selectro's retained earnings statement for 2018.

SELECTRO COMPANY RETAINED EARNINGS STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2018		
Retained earnings, January 1, as reported		\$350,000
Correction of an error (depreciation)	\$20,000	
Less: Applicable income tax reduction	8,000	(12,000)
Retained earnings, January 1, as adjusted		338,000
Add: Net income		400,000
Retained earnings, December 31		<u>\$738,000</u>

ILLUSTRATION 22-21
Reporting an Error—Single-Period Financial Statement

The balance sheet in 2018 would not have any deferred tax liability related to the building, and Accumulated Depreciation—Buildings is now restated at a higher amount. The income statement would not be affected.

Comparative Statements

If preparing comparative financial statements, a company should make adjustments to correct the amounts for all affected accounts reported in the statements for **all periods** reported. The company should restate the data to the correct basis for each year presented. It should **show any catch-up adjustment as a prior period adjustment to retained earnings for the earliest period it reported**. These requirements are essentially the same as those for reporting a change in accounting principle.

For example, in the case of Selectro, the error of omitting the depreciation of \$20,000 in 2017, discovered in 2018, results in the restatement of the 2017 financial statements. Illustration 22-22 shows the accounts that Selectro restates in the 2017 financial statements.

ILLUSTRATION 22-22

Reporting an Error—
Comparative Financial
Statements

In the balance sheet:	
Accumulated depreciation—buildings	\$20,000 increase
Deferred tax liability	\$ 8,000 decrease
Retained earnings, ending balance	\$12,000 decrease
In the income statement:	
Depreciation expense—buildings	\$20,000 increase
Income tax expense	\$ 8,000 decrease
Net income	\$12,000 decrease
In the retained earnings statement:	
Retained earnings, ending balance (due to lower net income for the period)	\$12,000 decrease

Selectro prepares the 2018 financial statements in comparative form with those of 2017 **as if the error had not occurred**. In addition, Selectro must disclose that it has restated its previously issued financial statements, and it describes the nature of the error. Selectro also must disclose the following.

1. The effect of the correction on each financial statement line item and any per share amounts affected for each prior period presented.
2. The cumulative effect of the change on retained earnings or other appropriate components of equity or net assets in the statement of financial position, as of the beginning of the earliest period presented. **[10]**

Summary of Accounting Changes and Correction of Errors

Having guidelines for reporting accounting changes and corrections has helped resolve several significant and long-standing accounting problems. Yet, because of diversity in situations and characteristics of the items encountered in practice, use of professional judgment is of paramount importance. In applying these guidelines, the primary objective is to serve the users of the financial statements. Achieving this objective requires accuracy, full disclosure, and an absence of misleading inferences.

Illustration 22-23 (on the next page) summarizes the main distinctions and treatments presented in the discussion in this chapter.

Changes in accounting principle are appropriate **only** when a company demonstrates that the newly adopted generally accepted accounting principle is **preferable** to the existing one. Companies and accountants determine preferability on the basis of whether the new principle constitutes an **improvement in financial reporting**, not on the basis of the income tax effect alone.⁹

But it is not always easy to determine an improvement in financial reporting. **How does one measure preferability or improvement?** Such measurement varies from company to company. **Quaker Oats Company**, for example, argued that a change in accounting principle to LIFO inventory valuation “better matches current costs with current revenues” (see Illustration 22-13, page 1280). Conversely, another company might change from LIFO to FIFO because it wishes to report a more realistic ending inventory. How do you determine which is the better of these two arguments? Determining the preferable method requires some “standard” or “objective.” Because no universal standard or objective is generally accepted, the problem of determining preferability continues to be difficult.

⁹A change in accounting principle, a change in the reporting entity (special type of change in accounting principle), and a correction of an error require an explanatory paragraph in the auditor’s report discussing lack of consistency from one period to the next. A change in accounting estimate does not affect the auditor’s opinion relative to consistency. However, if the change in estimate has a material effect on the financial statements, disclosure may still be required. Error correction not involving a change in accounting principle does not require disclosure relative to consistency.

UNDERLYING CONCEPTS

Neutrality is an important element of faithful representation.

ILLUSTRATION 22-23

Summary of Guidelines
for Accounting Changes
and Errors

Changes in Accounting Principle

Employ the retrospective approach by:

- a. Changing the financial statements of all prior periods presented.
- b. Disclosing in the year of the change the effect on net income and earnings per share for all prior periods presented.
- c. Reporting an adjustment to the beginning retained earnings balance in the retained earnings statement in the earliest year presented.

If impracticable to determine the prior period effect (e.g., change to LIFO):

- a. Do not change prior years' income.
- b. Use opening inventory in the year the method is adopted as the base-year inventory for all subsequent LIFO computations.
- c. Disclose the effect of the change on the current year, and the reasons for omitting the computation of the cumulative effect and pro forma amounts for prior years.

Changes in Accounting Estimate

Employ the current and prospective approach by:

- a. Reporting current and future financial statements on the new basis.
- b. Presenting prior period financial statements as previously reported.
- c. Making no adjustments to current-period opening balances for the effects in prior periods.

Changes in Reporting Entity

Employ the retrospective approach by:

- a. Restating the financial statements of all prior periods presented.
- b. Disclosing in the year of change the effect on net income and earnings per share data for all prior periods presented.

Changes Due to Error

Employ the restatement approach by:

- a. Correcting all prior period statements presented.
- b. Restating the beginning balance of retained earnings for the first period presented when the error effects occur in a period prior to the first period presented.

Initially, the SEC took the position that the auditor should indicate whether a change in accounting principle was preferable. The SEC has since modified this approach, noting that greater reliance may be placed on management's judgment in assessing preferability. Even though the preferability criterion is difficult to apply, the general guidelines have acted as a deterrent to capricious changes in accounting principles.¹⁰ **If a FASB rule creates a new principle, expresses preference for, or rejects a specific accounting principle, a change is considered clearly acceptable.**

WHAT DO THE NUMBERS MEAN?

Difficult as it is to determine which accounting standards have the strongest conceptual support, other complications make the process even more complex. These complications stem from the fact that managers have self-interest in how the financial statements make the company look. They

naturally wish to show their financial performance in the best light.

Research provides insights into why companies may prefer certain accounting methods. Some of these reasons are as follows.

- 1. Political costs.** As companies become larger and more politically visible, politicians and regulators devote more attention to them. The larger the firm, the more likely it is to become subject to regulation such as antitrust, and the more likely it is to be required to pay higher taxes. Therefore, companies that are politically visible may seek to report low income numbers,

¹⁰If management has not provided reasonable justification for the change in accounting principle, the auditor should express a qualified opinion. Or, if the effect of the change is sufficiently material, the auditor should express an adverse opinion on the financial statements. See "Reports on Audited Financial Statements," *Statement on Auditing Standards No. 58* (New York: AICPA, 1988).

to avoid the scrutiny of regulators. In addition, other constituents, such as labor unions, may be less willing to ask for wage increases if reported income is low. Researchers have found that the larger the company, the more likely it is to adopt income-decreasing approaches in selecting accounting methods.

- 2. Capital structure.** A number of studies have indicated that the capital structure of the company can affect the selection of accounting methods. For example, a company with a high debt to equity ratio is more likely to be constrained by debt covenants. The debt covenant may indicate that the company cannot pay dividends if retained earnings fall below a certain level. As a result, such a company is more likely to select accounting methods that will increase net income.
- 3. Bonus payments.** Studies have found that if compensation plans tie managers' bonus payments to income, management will select accounting methods that maximize their bonus payments.
- 4. Smooth earnings.** Substantial earnings increases attract the attention of politicians, regulators, and competitors. In addition, large increases in income are difficult to achieve in following years. Further, executive compensation plans would use these higher numbers as a baseline and make it difficult for managers to earn bonuses in subsequent years. Conversely, investors and competitors might view large decreases in earnings as a signal that the company is in financial trouble. Also, substantial decreases in income raise concerns on the part of stockholders, lenders, and other interested parties about the competency of management. For all these reasons, companies have an incentive to "manage" or "smooth" earnings. In general, management tends to believe that a steady 10 percent growth a year is much better than a 30 percent growth one year and a 10 percent decline the next. In other words, managers usually prefer a gradually increasing income report and sometimes change accounting methods to ensure such a result.

Management pays careful attention to the accounting it follows and often changes accounting methods, not for conceptual reasons, but for economic reasons. As indicated throughout this textbook, such arguments have come to be known as **economic consequences** arguments. These arguments focus on the supposed impact of the accounting method on the behavior of investors, creditors, competitors, governments, or managers of the reporting companies themselves.

To counter these pressures, standard-setters such as the FASB have declared, as part of their conceptual framework, that they will assess the merits of proposed standards from a position of **neutrality**. That is, they evaluate the soundness of standards on the basis of conceptual soundness, not on the grounds of possible impact on behavior. It is not the FASB's place to choose standards according to the kinds of behavior it wishes to promote and the kinds it wishes to discourage.

LEARNING OBJECTIVE 4

Analyze the effect of errors.

ERROR ANALYSIS

In this section, we show some additional types of accounting errors. Companies generally do not correct for errors that do not have a significant effect on the presentation of the financial statements. For example, should a company with a total annual payroll of \$1,750,000 and net income of \$940,000 correct its financial statements if it finds it failed to record accrued wages of \$5,000? No—it would not consider this error significant or material.

Obviously, defining materiality is difficult, and managers and auditors must use experience and judgment to determine whether adjustment is necessary for a given error. We assume **all errors discussed in this section to be material and to require adjustment.** (Also, we ignore all tax effects in this section.)

Companies must answer three questions in error analysis:

- 1.** What type of error is involved?
- 2.** What entries are needed to correct for the error?
- 3.** After discovery of the error, how are financial statements to be restated?

As indicated earlier, companies treat errors as **prior period adjustments and report them in the current year as adjustments to the beginning balance of Retained Earnings.** If a company presents comparative statements, it restates the prior affected statements to correct for the error.

Balance Sheet Errors

Balance sheet errors affect only the presentation of an asset, liability, or stockholders' equity account. Examples are the classification of a short-term receivable as part of the investment section, the classification of a note payable as an account payable, and the classification of plant assets as inventory.

When the error is discovered, the company reclassifies the item to its proper position. If the company prepares comparative statements that include the error year, it should correctly restate the balance sheet for the error year.

Income Statement Errors

Income statement errors involve the improper classification of revenues or expenses. Examples include recording interest revenue as part of sales, purchases as bad debt expense, and depreciation expense as interest expense. An income statement classification error has no effect on the balance sheet and **no effect on net income**.

A company must make a reclassification entry when it discovers the error, if it makes the discovery in the same year in which the error occurs. If the error occurred in prior periods, the company does not need to make a reclassification entry at the date of discovery because the accounts for the current year are correctly stated. (Remember that the company has closed the income statement accounts from the prior period to retained earnings.) If the company prepares comparative statements that include the error year, it restates the income statement for the error year.

Balance Sheet and Income Statement Errors

The third type of error involves both the balance sheet and income statement. For example, assume that the bookkeeper overlooked accrued wages payable at the end of the accounting period. The effect of this error is to understate expenses, understate liabilities, and overstate net income for that period of time. This type of error affects both the balance sheet and the income statement. We classify this type of error in one of two ways—counterbalancing or noncounterbalancing.

Counterbalancing errors are those that will be offset or corrected over two periods. For example, the failure to record accrued wages is a counterbalancing error because over a two-year period the error will no longer be present. In other words, the failure to record accrued wages in the previous period means (1) net income for the first period is overstated, (2) accrued wages payable (a liability) is understated, and (3) wages expense is understated. In the next period, net income is understated, accrued wages payable (a liability) is correctly stated, and wages expense is overstated. For the two **years combined**: (1) net income is correct, (2) wages expense is correct, and (3) accrued wages payable at the end of the second year is correct. Most errors in accounting that affect both the balance sheet and income statement are counterbalancing errors.

Noncounterbalancing errors are those that are not offset in the next accounting period. An example would be the failure to capitalize equipment that has a useful life of five years. If we expense this asset immediately, expenses will be overstated in the first period but understated in the next four periods. At the end of the second period, the effect of the error is not fully offset. Net income is correct in the aggregate only at the end of five years because the asset is fully depreciated at this point. Thus, **non-counterbalancing errors are those that take longer than two periods to correct themselves**.

Only in rare instances is an error never reversed. An example would be if a company initially expenses land. Because land is not depreciable, theoretically the error is never offset, unless the land is sold.

Counterbalancing Errors

We illustrate the usual types of counterbalancing errors on the following pages. In studying these illustrations, keep in mind a couple of points.

First, determine whether the company has closed the books for the period in which the error is found:

- 1. If the company has closed the books in the current year:**
 - (a) If the error is already counterbalanced, no entry is necessary.
 - (b) If the error is not yet counterbalanced, make an entry to adjust the present balance of retained earnings.
- 2. If the company has not closed the books in the current year:**
 - (a) If the error is already counterbalanced, make an entry to correct the error in the current period and to adjust the beginning balance of Retained Earnings.
 - (b) If the error is not yet counterbalanced, make an entry to adjust the beginning balance of Retained Earnings.

Second, if the company presents comparative statements, it must restate the amounts for comparative purposes. **Restatement is necessary even if a correcting journal entry is not required.**

To illustrate, assume that Sanford Cement Co. failed to accrue revenue in 2015 when it fulfilled its performance obligation, but recorded the revenue in 2016 when it received payment. The company discovered the error in 2018. It does not need to make an entry to correct for this error because the effects have been counterbalanced by the time Sanford discovered the error in 2018. However, if Sanford presents comparative financial statements for 2015 through 2018, it must **restate the accounts and related amounts for the years 2015 and 2016 for financial reporting purposes.**

The sections that follow demonstrate the accounting for the usual types of counterbalancing errors.

Failure to Record Accrued Wages. On December 31, 2017, Hurley Enterprises did not accrue wages in the amount of \$1,500. The entry in 2018 to correct this error, assuming Hurley has not closed the books for 2018, is:

Retained Earnings	1,500	
Salaries and Wages Expense		1,500

The rationale for this entry is as follows. (1) When Hurley pays the 2017 accrued wages in 2018, it makes an additional debit of \$1,500 to 2018 Salaries and Wages Expense. (2) Salaries and Wages Expense—2018 is overstated by \$1,500. (3) Because the company did not record 2017 accrued wages as Salaries and Wages Expense in 2017, the net income for 2017 was overstated by \$1,500. (4) Because 2017 net income is overstated by \$1,500, the Retained Earnings account is overstated by \$1,500 (because net income is closed to Retained Earnings).

If Hurley has closed the books for 2018, it makes no entry because the error is counterbalanced.

Failure to Record Prepaid Expenses. In January 2017, Hurley Enterprises purchased a two-year insurance policy costing \$1,000. It debited Insurance Expense, and credited Cash. The company made no adjusting entries at the end of 2017.

The entry on December 31, 2018, to correct this error, assuming Hurley has not closed the books for 2018, is:

Insurance Expense	500	
Retained Earnings		500

If Hurley has closed the books for 2018, it makes no entry because the error is counterbalanced.

Understatement of Unearned Revenue. On December 31, 2017, Hurley Enterprises received \$50,000 as a prepayment for renting certain office space for the following year. At the time of receipt of the rent payment, the company recorded a debit to Cash and a credit to Rent Revenue. It made no adjusting entry as of December 31, 2017. The entry

on December 31, 2018, to correct for this error, assuming that Hurley has not closed the books for 2018, is:

Retained Earnings	50,000	
Rent Revenue		50,000

If Hurley has closed the books for 2018, it makes no entry because the error is counterbalanced.

Overstatement of Accrued Revenue. On December 31, 2017, Hurley Enterprises accrued as interest revenue \$8,000 that applied to 2018. On that date, the company recorded a debit to Interest Receivable and a credit to Interest Revenue. The entry on December 31, 2018, to correct for this error, assuming that Hurley has not closed the books for 2018, is:

Retained Earnings	8,000	
Interest Revenue		8,000

If Hurley has closed the books for 2018, it makes no entry because the error is counterbalanced.

Overstatement of Purchases. Hurley's accountant recorded a purchase of merchandise for \$9,000 in 2017 that applied to 2018. The physical inventory for 2017 was correctly stated. The company uses the periodic inventory method. The entry on December 31, 2018, to correct for this error, assuming that Hurley has not closed the books for 2018, is:

Purchases	9,000	
Retained Earnings		9,000

If Hurley has closed the books for 2018, it makes no entry because the error is counterbalanced.

Noncounterbalancing Errors

The entries for noncounterbalancing errors are more complex. Companies must make correcting entries, even if they have closed the books.

Failure to Record Depreciation. Assume that on January 1, 2017, Hurley Enterprises purchased a machine for \$10,000 that had an estimated useful life of five years. The accountant incorrectly expensed this machine in 2017, but discovered the error in 2018. If we assume that Hurley uses straight-line depreciation on this asset, the entry on December 31, 2018, to correct for this error, given that Hurley has or has not closed the books, is as follows:

Hurley has not closed the books for 2018:		
Equipment	10,000	
Depreciation Expense	2,000	
Retained Earnings		8,000*
Accumulated Depreciation—Equipment (20% × \$10,000 × 2)		4,000
*Overstatement of expense in 2017	\$10,000	
Proper depreciation for 2017 (20% × \$10,000)	(2,000)	
Retained earnings understated as of Dec. 31, 2017	<u>\$ 8,000</u>	
Hurley has closed the books for 2018:		
Equipment	10,000	
Retained Earnings		6,000*
Accumulated Depreciation—Equipment		4,000
*Retained earnings understated as of Dec. 31, 2017	\$ 8,000	
Proper depreciation for 2018 (20% × \$10,000)	(2,000)	
Retained earnings understated as of Dec. 31, 2018	<u>\$ 6,000</u>	

Failure to Adjust for Bad Debts. Companies sometimes use a specific charge-off method in accounting for bad debt expense when a percentage of sales is more appropriate. They then make adjustments to change from the specific write-off to some type of allowance method. For example, assume that Hurley Enterprises has recognized bad debt expense when it has the following uncollectible debts.

	<u>2017</u>	<u>2018</u>
From 2017 sales	\$550	\$690
From 2018 sales		700

Hurley estimates that it will charge off an additional \$1,400 in 2019, of which \$300 is applicable to 2017 sales and \$1,100 to 2018 sales. The entry on December 31, 2018, assuming that Hurley has or has not closed the books for 2018, is as follows.

Hurley has not closed the books in 2018:		
Bad Debt Expense	410	
Retained Earnings	990	
Allowance for Doubtful Accounts		1,400
Allowance for doubtful accounts: Additional \$300 for 2017 sales and \$1,100 for 2018 sales.		
Bad debts and retained earnings balance:		
	<u>2017</u>	<u>2018</u>
Bad debts charged for	\$1,240*	\$ 700
Additional bad debts anticipated in 2019	300	1,100
Proper bad debt expense	1,540	1,800
Charges currently made to each period	(550)	(1,390)
Bad debt adjustment	\$ 990	\$ 410
*\$550 + \$690 = \$1,240		
Hurley has closed the books for 2018:		
Retained Earnings	1,400	
Allowance for Doubtful Accounts		1,400

Comprehensive Example: Numerous Errors

In some circumstances a combination of errors occurs. The company therefore prepares a worksheet to facilitate the analysis. The following problem demonstrates use of the worksheet. The mechanics of its preparation should be obvious from the solution format. The income statements of Hudson Company for the years ended December 31, 2016, 2017, and 2018, indicate the following net incomes.

2016	\$17,400
2017	20,200
2018	11,300

An examination of the accounting records for these years indicates that Hudson Company made several errors in arriving at the net income amounts reported:

1. The company consistently omitted from the records wages earned by workers but not paid at December 31. The amounts omitted were:

December 31, 2016	\$1,000
December 31, 2017	1,400
December 31, 2018	1,600

When paid in the year following that in which they were earned, Hudson recorded these amounts as expenses.

2. The company overstated merchandise inventory on December 31, 2016, by \$1,900 as the result of errors made in the footings and extensions on the inventory sheets.

3. On December 31, 2017, Hudson expensed prepaid insurance of \$1,200, applicable to 2018.
4. The company did not record on December 31, 2017, interest receivable in the amount of \$240.
5. On January 2, 2017, Hudson sold for \$1,800 a piece of equipment costing \$3,900. At the date of sale, the equipment had accumulated depreciation of \$2,400. The company recorded the cash received as Miscellaneous Income in 2017. In addition, the company continued to record depreciation for this equipment in both 2017 and 2018 at the rate of 10 percent of cost.

The first step in preparing the worksheet is to prepare a schedule showing the corrected net income amounts for the years ended December 31, 2016, 2017, and 2018. Each correction of the amount originally reported is clearly labeled. The next step is to indicate the balance sheet accounts affected as of December 31, 2018. Illustration 22-24 shows the completed worksheet for Hudson Company.

Retained Earnings		390
(To correct improper charge for depreciation expense in 2017 and 2018)		
Hudson Company has closed the books for 2018:		
Retained Earnings	1,600	
Salaries and Wages Payable		1,600
(To record proper wage expense for 2018)		
Retained Earnings	1,500	
Accumulated Depreciation—Equipment	2,400	
Equipment		3,900
(To record write-off of equipment in 2017 and adjustment of Retained Earnings)		
Accumulated Depreciation—Equipment	780	
Retained Earnings		780
(To correct improper charge for depreciation expense in 2017 and 2018)		

WHAT DO THE NUMBERS MEAN?

Restatements sometimes occur because of financial fraud. Financial frauds involve the intentional misstatement or omission of material information in the organization's financial reports. Common methods of financial fraud manipulation include recording fictitious revenues, concealing liabilities or expenses, and artificially inflating reported assets. Financial

GUARD THE FINANCIAL STATEMENTS!

frauds made up around 8 percent of the frauds in a recent study on occupational fraud but caused a median loss of more than \$1 million in 2014 (\$4 million in 2010)—by far the most costly category of fraud. The following chart compares loss amounts for 2014 versus 2012 and 2010 for financial statement fraud, corruption, and asset misappropriation.

While the trend in the dollar amount of losses is going in the right direction, another study indicates that the number of fraud reports at 1,400 companies in the “Quarterly Corporate Fraud Index” is on the climb—with 2,348 reported frauds in the second quarter of 2005 to over 7,800 in the second quarter of 2012.

While there is some debate about whether the reporting of fraud has increased with regulation that provides whistleblower protections (i.e., the incidence of fraud is not increasing as much as the reporting of fraud), companies must increase their efforts to protect their statements from the negative effects of fraud.

Sources: Report to the Nations on Occupational Fraud and Abuse, 2012 Global Fraud Study, Association of Certified Fraud Examiners (2014), p. 11; and C. McDonald, “Fraud Reports Climb Still Higher,” CFO.com (September 26, 2012).

Preparation of Financial Statements with Error Corrections

Up to now, our discussion of error analysis has focused on identifying the type of error involved and accounting for its correction in the records. We have noted that companies must present the correction of the error on comparative financial statements.

The following example illustrates how a company would restate a typical year’s financial statements, given many different errors.

Dick & Wally’s Outlet is a small retail outlet in the town of Holiday. Lacking expertise in accounting, the company does not keep adequate records, and numerous errors occurred in recording accounting information.

1. The bookkeeper inadvertently failed to record a cash receipt of \$1,000 on the sale of merchandise in 2018.
2. Accrued wages expense at the end of 2017 was \$2,500; at the end of 2018, \$3,200. The company does not accrue for wages; all wages are charged to Administrative Expenses.
3. The company had not set up an allowance for estimated uncollectible receivables. Dick and Wally decided to set up such an allowance for the estimated probable losses, as of December 31, 2018, for 2017 accounts of \$700, and for 2018 accounts of \$1,500. They also decided to correct the charge against each year so that it shows the losses (actual and estimated) relating to that year’s sales. The company has written off accounts to bad debt expense (selling expense) as follows.

	<u>In 2017</u>	<u>In 2018</u>
2017 accounts	\$400	\$2,000
2018 accounts		1,600

4. Prepaid insurance not recorded at the end of 2017 was \$600, and at the end of 2018, \$400. All insurance is charged to Administrative Expenses.
5. An account payable of \$6,000 should have been a note payable.

YOU WILL WANT TO READ THE IFRS INSIGHTS ON PAGES 1326-1329
 For discussion of IFRS related to accounting changes and errors.

- 6. During 2017, the company sold for \$7,000 an asset that cost \$10,000 and had a book value of \$4,000. At the time of sale, Cash was debited and Miscellaneous Income was credited for \$7,000.
- 7. As a result of the last transaction, the company overstated depreciation expense (an administrative expense) in 2017 by \$800 and in 2018 by \$1,200.

Illustration 22-25 presents a worksheet that begins with the unadjusted trial balance of Dick & Wally's Outlet. You can determine the correcting entries and their effect on the financial statements by examining the worksheet.

APPENDIX 22A

CHANGING FROM OR TO THE EQUITY METHOD

As noted in the chapter, companies generally should report an accounting change that results in financial statements for a different entity by **changing the financial statements of all prior periods presented**.

An example of a change in reporting entity is when a company's level of ownership or influence changes, such as when it changes from or to the equity method. When changing **to** the equity method, companies use retrospective application. Companies treat a change **from** the equity method prospectively. We present examples of these changes in entity in the following two sections.

LEARNING OBJECTIVE *5

Make the computations and prepare the entries necessary to record a change from or to the equity method of accounting.

CHANGE FROM THE EQUITY METHOD

If the investor level of influence or ownership falls below that necessary for continued use of the equity method, a company must change from the equity method to the fair value method. The earnings or losses that the investor previously recognized under the equity method should **remain as part of the carrying amount** of the investment, with no retrospective application to the new method.

When a company changes **from the equity method to the fair value method, the cost basis for accounting purposes is the carrying amount of the investment at the date of the change**. The investor applies the new method in its entirety once the equity method is no longer appropriate. At the next reporting date, the investor should record the unrealized holding gain or loss to recognize the difference between the carrying amount and fair value.¹¹

Dividends in Excess of Earnings

In subsequent periods, dividends received by the investor company may exceed its share of the investee's earnings for such periods (all periods following the change in method). To the extent that they do so, the investor company should account for such dividends as a **reduction of the investment carrying amount**, rather than as revenue. The reason: Dividends in excess of earnings are viewed as a liquidating dividend, with this excess then accounted for as a reduction of the equity investment.

To illustrate, assume that on January 1, 2016, Investor Company purchased 250,000 shares of Investee Company's 1,000,000 shares of outstanding stock for \$8,500,000. Investor correctly accounted for this investment using the equity method. After accounting for dividends received and investee net income, in 2016 Investor reported its investment in Investee Company at \$8,780,000 at December 31, 2016. On January 2, 2017, Investee Company sold 1,500,000 additional shares of its own common stock to the public, thereby reducing Investor Company's ownership from 25 percent to 10 percent. Illustration 22A-1 shows the net income (or loss) and dividends of Investee Company for the years 2017 through 2019.

Year	Investor's Share of Investee Income (Loss)	Investee Dividends Received by Investor
2017	\$600,000	\$ 400,000
2018	350,000	400,000
2019	-0-	210,000
Totals	<u>\$950,000</u>	<u>\$1,010,000</u>

ILLUSTRATION 22A-1

Income Earned and
Dividends Received

¹¹A retrospective application for this type of change is impracticable in many cases. Determining fair values on a portfolio basis for securities in previous periods may be quite difficult. As a result, prospective application is used.

Assuming a change from the equity method to the fair value method as of January 2, 2017, Investor Company's reported investment in Investee Company and its reported income would be as shown in Illustration 22A-2.

ILLUSTRATION 22A-2

Impact on Investment
Carrying Amount

Year	Dividend Revenue Recognized	Cumulative Excess of Share of Earnings over Dividends Received	Investment at December 31
2017	\$400,000	\$200,000 ^a	\$8,780,000
2018	400,000	150,000 ^b	8,780,000
2019	150,000	(60,000) ^c	\$8,780,000 – \$60,000 = \$8,720,000

^a\$600,000 – \$400,000 = \$200,000
^b(\$350,000 – \$400,000) + \$200,000 = \$150,000
^c\$150,000 – \$210,000 = \$(60,000)

Investor Company would record the dividends and earnings data for the three years subsequent to the change in methods as shown by the following entries.

2017 and 2018

Cash	400,000	
Dividend Revenue		400,000
(To record dividend received from Investee Company)		

2019

Cash	210,000	
Equity Investments		60,000
Dividend Revenue		150,000
(To record dividend revenue from Investee Company in 2019 and to recognize cumulative excess of dividends received over share of Investee earnings in periods subsequent to change from equity method)		

CHANGE TO THE EQUITY METHOD

When converting to the equity method, companies use retrospective application. Such a change involves adjusting the carrying amount of the investment, results of current and prior operations, and retained earnings of the investor **as if the equity method has been in effect during all of the previous periods in which this investment was held.**

[12] When changing from the fair value method to the equity method, companies also must adjust for any Unrealized Holding Gain or Loss—Income amounts in Retained Earnings and the Fair Value Adjustment account. In addition, they record the investment under the equity method.

For example, on January 2, 2017, Amsted Corp. purchased, for \$500,000 cash, 10 percent of the outstanding shares of Cable Company common stock. On that date, the net identifiable assets of Cable Company had a fair value of \$3,000,000. The excess of cost over the underlying equity in the net identifiable assets of Cable Company is goodwill. On January 2, 2019, Amsted Corp. purchased an additional 20 percent of Cable Company's stock for \$1,200,000 cash when the fair value of Cable's net identifiable assets was \$4,000,000. The excess of cost over fair value related to this additional investment is goodwill. Now having a 30 percent interest, Amsted Corp. must use the equity method.

From January 2, 2017, to January 2, 2019, Amsted Corp. used the fair value method. At January 2, 2019, the Retained Earnings account for Amsted included a credit balance of \$92,000 related to Unrealized Holding Gain or Loss—Income recorded in 2017 and a debit balance in its Fair Value Adjustment account of the same amount. (Income tax effects are ignored.) Illustration 22A-3 shows the net income reported by Cable Company and the Cable Company dividends received by Amsted during the period 2017 through 2019.

Year	Cable Company Net Income	Cable Co. Dividends Paid to Amsted
2017	\$ 500,000	\$ 20,000
2018	1,000,000	30,000
2019	1,200,000	120,000

ILLUSTRATION 22A-3

Income Earned and Dividends Received

Amsted makes the following journal entries from January 2, 2017, through December 31, 2019, relative to Amsted Corp.'s investment in Cable Company, reflecting the data above and a change from the fair value method to the equity method.¹²

January 2, 2017			
Equity Investments	500,000		
Cash		500,000	
(To record the purchase of a 10% interest in Cable Company)			
December 31, 2017			
Cash	20,000		
Dividend Revenue		20,000	
(To record the receipt of cash dividends from Cable Company)			
Fair Value Adjustment	92,000		
Unrealized Holding Gain or Loss—Income		92,000	
(To record increase in fair value of securities)			
December 31, 2018			
Cash	30,000		
Dividend Revenue		30,000	
(To record the receipt of cash dividends from Cable Company)			
January 2, 2019			
Equity Investments (Cable Company)	1,300,000		
Cash		1,200,000	
Retained Earnings		100,000*	
(To record the purchase of an additional interest in Cable Company and to reflect retrospectively a change from the fair value method to the equity method of accounting for the investment)			
*The \$100,000 adjustment is computed as follows:			
	<u>2017</u>	<u>2018</u>	<u>Total</u>
Amsted Corp. equity in earnings of			
Cable Company (10%)	\$50,000	\$100,000	\$150,000
Dividend received	(20,000)	(30,000)	(50,000)
Retrospective application	<u>\$30,000</u>	<u>\$ 70,000</u>	<u>\$100,000</u>

¹²Adapted from Paul A. Pacter, "Applying APB Opinion No. 18—Equity Method," *Journal of Accountancy* (September 1971), pp. 59–60.

January 2, 2019		
Equity Investments (Cable Company)	500,000	
Equity Investments		500,000
(To reclassify initial 10% interest to equity method)		
January 2, 2019		
Retained Earnings	92,000	
Fair Value Adjustment		92,000
(To eliminate fair value accounts for change to equity method)		
December 31, 2019		
Equity Investments (Cable Company)	360,000	
Investment Revenue		360,000
[To record equity in earnings of Cable Company (30% of \$1,200,000)]		
Cash	120,000	
Equity Investments (Cable Company)		120,000
(To record the receipt of cash dividends from Cable Company)		

Companies change to the equity method by placing the accounts related to and affected by the investment on the same basis **as if the equity method had always been the basis of accounting for that investment**. Thus, they report the effects of this accounting change using the retrospective approach.¹³

¹³The change to the equity method illustration assumes that the fair value and the book value of the net identifiable assets of the investee are the same. However, the fair value of the net identifiable assets of the investee may be greater than their book value. In this case, this excess (if depreciable or amortizable) reduces the net income reported by the investor from the investee. For example, assume that the fair value of an investee's building is \$1,000,000 and its book value is \$800,000 at the time of change to the equity method. In that case, this difference of \$200,000 is depreciated over the useful life of the building, thereby reducing the amount of investee's net income reported on the investor's books.

prospectively, 1269

restatement, 1285(n)

retrospective application, 1269

LEARNING OBJECTIVES REVIEW

1 Identify types of accounting changes and understand the accounting for changes in accounting principles.

The three different types of accounting changes are as follows. (1) *Change in accounting principle*: a change from one generally accepted accounting principle to another generally accepted accounting principle. (2) *Change in accounting estimate*: a change that occurs as the result of new information or as additional experience is acquired. (3) *Change in reporting entity*: a change from reporting as one type of entity to another type of entity.

A **change in accounting principle** involves a change from one generally accepted accounting principle to another. A change in accounting principle is not considered to result from the adoption of a new principle in recognition of events that have occurred for the first time or that were previously immaterial. If the accounting principle previously followed was not acceptable or if the principle was applied incorrectly, a change to a generally accepted accounting principle is considered a correction of an error.

The general requirement for changes in accounting principle is **retrospective application**. Under retrospective application, companies change prior years' financial statements on a basis consistent with the newly adopted principle. They treat any part of the effect attributable to years prior to those presented as an adjustment of the earliest retained earnings presented. However, retrospective application is impracticable if the prior period effect cannot be determined using every reasonable effort to do so. For example, in changing to LIFO, the base-year inventory for all subsequent LIFO calculations is generally the opening inventory in the year the company adopts the method. There is no restatement of prior years' income because it is often too impractical to do so.

2 Describe the accounting for changes in estimates and changes in the reporting entity.

Companies report changes in estimates prospectively. That is, companies should make no changes in previously reported results. They do not adjust opening balances nor change financial statements of prior periods.

An accounting change that results in financial statements that are actually the statements of a different entity should be reported by restating the financial statements of all prior periods presented, to show the financial information for the new reporting entity for all periods.

3 Describe the accounting for correction of errors.

Companies must correct errors as soon as they discover them, by proper entries in the accounts, and report them in the financial statements. The profession requires that a company treat corrections of errors as prior period adjustments, record them in the year in which it discovered the errors, and report them in the financial statements in the proper periods. If presenting comparative statements, a company should restate the prior statements affected to correct for the errors. The company need not repeat the disclosures in the financial statements of subsequent periods.

4 Analyze the effect of errors.

Three types of errors can occur. (1) *Balance sheet errors*, which affect only the presentation of an asset, liability, or stockholders' equity account. (2) *Income statement errors*, which affect only the presentation of revenue, expense, gain, or loss accounts in the income statement. (3) *Balance sheet and income statement errors*, which involve both the balance sheet and income statement. Errors are classified into two types. (1) *Counterbalancing errors* are offset or corrected over two periods. (2) *Noncounterbalancing errors* are not offset in the next accounting period and take longer than two periods to correct themselves.

*5 Make the computations and prepare the entries necessary to record a change from or to the equity method of accounting.

When changing *from* the equity method to the fair value method, the cost basis for accounting purposes is the carrying amount used for the investment at the date of change. The investor company applies the new method in its entirety once the equity method is no longer appropriate. When changing *to* the equity method, the company adjusts the accounts to be on the same basis as if the equity method had always been used for that investment.

As an aid to understanding accounting changes, we provide the following glossary.

KEY TERMS RELATED TO ACCOUNTING CHANGES

ACCOUNTING CHANGE. A change in (1) an accounting principle, (2) an accounting estimate, or (3) the reporting entity. The correction of an error in previously issued financial statements is not an accounting change.

CHANGE IN ACCOUNTING PRINCIPLE. A change from one generally accepted accounting principle to another generally accepted accounting principle when two or more generally accepted accounting principles apply or when the accounting principle formerly used is no longer generally accepted.

CHANGE IN ACCOUNTING ESTIMATE. A change that has the effect of adjusting the carrying amount of an existing asset or liability or altering the subsequent accounting for existing or future assets or liabilities. Changes in accounting estimates result from new information.

CHANGE IN ACCOUNTING ESTIMATE EFFECTED BY A CHANGE IN ACCOUNTING PRINCIPLE. A change in accounting estimate that is inseparable from the effect of a related change in accounting principle.

CHANGE IN REPORTING ENTITY. A change that results in financial statements that, in effect, are those of a different reporting entity (see page 1268).

DIRECT EFFECTS OF A CHANGE IN ACCOUNTING PRINCIPLE. Those recognized changes in assets or liabilities necessary to effect a change in accounting principle.

ERROR IN PREVIOUSLY ISSUED FINANCIAL STATEMENTS. An error in recognition, measurement, presentation, or disclosure in financial statements resulting from mathematical mistakes, mistakes in the application of GAAP, or oversight or misuse of facts that existed at the time the financial statements were prepared. A change from an accounting principle that is not generally accepted to one that is generally accepted is a correction of an error.

INDIRECT EFFECTS OF A CHANGE IN ACCOUNTING PRINCIPLE. Any changes to current or future cash flows of an entity that result from making a change in accounting principle that is applied retrospectively.

RESTATEMENT. The process of revising previously issued financial statements to reflect the correction of an error in those financial statements.

RETROSPECTIVE APPLICATION. The application of a different accounting principle to one or more previously issued financial statements, or to the statement of financial position at the beginning of the current period, as if that principle had always been used, or a change to financial statements of prior accounting periods to present the financial statements of a new reporting entity as if it had existed in those prior years. [11]

ENHANCED REVIEW AND PRACTICE

PRACTICE PROBLEM

Wangerin Company is in the process of adjusting and correcting its books at the end of 2017. In reviewing its records, the following information is compiled.

- At December 31, 2017, Wangerin decided to change the depreciation method on its office equipment from double-declining-balance to straight-line. The equipment had an original cost of \$200,000 when purchased on January 1, 2015. It has a 10-year useful life and no salvage value. Depreciation expense recorded prior to 2017 under the double-declining-balance method was \$72,000. Wangerin has already recorded 2017 depreciation expense of \$25,600 using the double-declining-balance method.
- Before 2017, Wangerin accounted for its income from long-term construction contracts on the completed-contract basis. Early in 2017, Wangerin changed to the percentage-of-completion basis for accounting purposes. It continues to use the completed-contract method for tax purposes. Income for 2017 has been recorded using the percentage-of-completion method. The following information is available.

	Pretax Income	
	Percentage-of-Completion	Completed-Contract
Prior to 2017	\$450,000	\$315,000
2017	180,000	60,000

- Insurance for a 12-month period purchased on November 1 of this year was charged to insurance expense in the amount of \$3,300 because "the amount of the check is about the same every year."
- Reported sales revenue for the year is \$1,908,000. This includes all sales taxes collected for the year. The sales tax rate is 6%. Because the sales tax is forwarded to the state's Department of Revenue, the Sales Tax Expense account is debited. The

bookkeeper thought that “the sales tax is a selling expense.” At the end of the current year, the balance in the Sales Tax Expense account is \$103,400.

Instructions

Prepare the journal entries necessary at December 31, 2017, to record the above corrections and changes. The books are still open for 2017. The income tax rate is 40%. Wangerin has not yet recorded its 2017 income tax expense and payable amounts so current-year tax effects may be ignored. Prior-year tax effects must be considered in item 2.

SOLUTION

1.	Accumulated Depreciation—Equipment	9,600	
	Depreciation Expense		9,600*
	*Equipment cost	\$200,000	
	Depreciation before 2015	(72,000)	
	Book value	<u>\$128,000</u>	
	Depreciation recorded	\$ 25,600	
	Depreciation to be taken (\$128,000/8)	(16,000)	
	Difference	<u>\$ 9,600</u>	
2.	Construction in Process	135,000	
	Deferred Tax Liability		54,000*
	Retained Earnings		81,000
	*(\$450,000 - \$315,000) × 40%		
3.	Prepaid Insurance (\$3,300 × 10/12)	2,750	
	Insurance Expense		2,750
4.	Sales Revenue [$\$1,908,000 \div (1.00 + .06) \times 6\%$]	108,000	
	Sales Taxes Payable		108,000
	Sales Taxes Payable	103,400	
	Sales Tax Expense		103,400

Exercises, Problems, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

- In recent years, the *Wall Street Journal* has indicated that many companies have changed their accounting principles. What are the major reasons why companies change accounting methods?
- State how each of the following items is reflected in the financial statements.
 - Change from FIFO to LIFO method for inventory valuation purposes.
 - Charge for failure to record depreciation in a previous period.
 - Litigation won in current year, related to prior period.
 - Change in the realizability of certain receivables.
 - Write-off of receivables.
 - Change from the percentage-of-completion to the completed-contract method for reporting net income.
- Discuss briefly the three approaches that have been suggested for reporting changes in accounting principles.
- Identify and describe the approach the FASB requires for reporting changes in accounting principles.
- What is the indirect effect of a change in accounting principle? Briefly describe the reporting of the indirect effects of a change in accounting principle.
- Define a change in estimate and provide an illustration. When is a change in accounting estimate effected by a change in accounting principle?
- Lenexa State Bank has followed the practice of capitalizing certain marketing costs and amortizing these costs over their expected life. In the current year, the bank determined that the future benefits from these costs were doubtful. Consequently, the bank adopted the policy of expensing these costs as incurred. How should the bank report this accounting change in the comparative financial statements?

8. Indicate how the following items are recorded in the accounting records in the current year of Coronet Co.
 - (a) Impairment of goodwill.
 - (b) A change in depreciating plant assets from accelerated to the straight-line method.
 - (c) Large write-off of inventories because of obsolescence.
 - (d) Change from the cash basis to accrual basis of accounting.
 - (e) Change from LIFO to FIFO method for inventory valuation purposes.
 - (f) Change in the estimate of service lives for plant assets.
9. Whittier Construction Co. had followed the practice of expensing all materials assigned to a construction job without recognizing any salvage inventory. On December 31, 2017, it was determined that salvage inventory should be valued at \$52,000. Of this amount, \$29,000 arose during the current year. How does this information affect the financial statements to be prepared at the end of 2017?
10. Parsons Inc. has proposed a change from one inventory accounting method to another for financial reporting purposes. The auditor indicates that a change would be permitted only if it is to a preferable method. What difficulties develop in assessing preferability?
11. Discuss how a change to the LIFO method of inventory valuation is handled when it is impracticable to determine previous LIFO inventory amounts.
12. How should consolidated financial statements be reported this year when statements of individual companies were presented last year?
13. Simms Corp. controlled four domestic subsidiaries and one foreign subsidiary. Prior to the current year, Simms Corp. had excluded the foreign subsidiary from consolidation. During the current year, the foreign subsidiary was included in the financial statements. How should this change in accounting entity be reflected in the financial statements?
14. Distinguish between counterbalancing and noncounterbalancing errors. Give an example of each.
15. Discuss and illustrate how a correction of an error in previously issued financial statements should be handled.
16. Prior to 2017, Heberling Inc. excluded manufacturing overhead costs from work in process and finished goods inventory. These costs have been expensed as incurred. In 2017, the company decided to change its accounting methods for manufacturing inventories to full costing by including these costs as product costs. Assuming that these costs are material, how should this change be reflected in the financial statements for 2016 and 2017?
17. Elliott Corp. failed to record accrued salaries for 2016, \$2,000; 2017, \$2,100; and 2018, \$3,900. What is the amount of the overstatement or understatement of Retained Earnings at December 31, 2019?
18. In January 2017, installation costs of \$6,000 on new machinery were charged to Maintenance and Repairs Expense. Other costs of this machinery of \$30,000 were correctly recorded and have been depreciated using the straight-line method with an estimated life of 10 years and no salvage value. At December 31, 2018, it is decided that the machinery has a remaining useful life of 20 years, starting with January 1, 2018. What entry(ies) should be made in 2018 to correctly record transactions related to machinery, assuming the machinery has no salvage value? The books have not been closed for 2018 and depreciation expense has not yet been recorded for 2018.
19. On January 2, 2017, \$100,000 of 11%, 10-year bonds were issued for \$97,000. The \$3,000 discount was charged to Interest Expense. The bookkeeper, Mark Landis, records interest only on the interest payment dates of January 1 and July 1. What is the effect on reported net income for 2017 of this error, assuming straight-line amortization of the discount? What entry is necessary to correct for this error, assuming that the books are not closed for 2017?
20. An entry to record Purchases and related Accounts Payable of \$13,000 for merchandise purchased on December 23, 2018, was recorded in January 2019. This merchandise was not included in inventory at December 31, 2018. What effect does this error have on reported net income for 2018? What entry should be made to correct for this error, assuming that the books are not closed for 2018?
21. Equipment was purchased on January 2, 2017, for \$24,000, but no portion of the cost has been charged to depreciation. The corporation wishes to use the straight-line method for these assets, which have been estimated to have a life of 10 years and no salvage value. What effect does this error have on net income in 2017? What entry is necessary to correct for this error, assuming that the books are not closed for 2017?

BRIEF EXERCISES

BE22-1 (LO1) At the beginning of 2017, Wertz Construction Company changed from the completed-contract method to recognizing revenue over time (percentage-of-completion) for financial reporting purposes. The company will continue to use the completed-contract method for tax purposes. For years prior to 2017, pretax income under the two methods was as follows: percentage-of-completion \$120,000, and completed-contract \$80,000. The tax rate is 35%. Prepare Wertz's 2017 journal entry to record the change in accounting principle.

BE22-2 (LO1) Refer to the accounting change by Wertz Construction Company in BE22-1. Wertz has a profit-sharing plan, which pays all employees a bonus at year-end based on 1% of pretax income. Compute the indirect effect of Wertz's change in accounting principle that will be reported in the 2017 income statement, assuming that the profit-sharing contract explicitly requires adjustment for changes in income numbers.

BE22-3 (L01) Shannon, Inc., changed from the LIFO cost flow assumption to the FIFO cost flow assumption in 2017. The increase in the prior year's income before taxes is \$1,200,000. The tax rate is 40%. Prepare Shannon's 2017 journal entry to record the change in accounting principle.

BE22-4 (L01) Tedesco Company changed depreciation methods in 2017 from double-declining-balance to straight-line. Depreciation prior to 2017 under double-declining-balance was \$90,000, whereas straight-line depreciation prior to 2017 would have been \$50,000. Tedesco's depreciable assets had a cost of \$250,000 with a \$40,000 salvage value, and an 8-year remaining useful life at the beginning of 2017. Prepare the 2017 journal entries, if any, related to Tedesco's depreciable assets.

BE22-5 (L02) Sesame Company purchased a computer system for \$74,000 on January 1, 2016. It was depreciated based on a 7-year life and an \$18,000 salvage value. On January 1, 2018, Sesame revised these estimates to a total useful life of 4 years and a salvage value of \$10,000. Prepare Sesame's entry to record 2018 depreciation expense. Sesame uses straight-line depreciation.

BE22-6 (L03) In 2017, Bailey Corporation discovered that equipment purchased on January 1, 2015, for \$50,000 was expensed at that time. The equipment should have been depreciated over 5 years, with no salvage value. The effective tax rate is 30%. Prepare Bailey's 2017 journal entry to correct the error. Bailey uses straight-line depreciation.

BE22-7 (L03) At January 1, 2017, Beidler Company reported retained earnings of \$2,000,000. In 2017, Beidler discovered that 2016 depreciation expense was understated by \$400,000. In 2017, net income was \$900,000 and dividends declared were \$250,000. The tax rate is 40%. Prepare a 2017 retained earnings statement for Beidler Company.

BE22-8 (L03) Indicate the effect—Understate, Overstate, No Effect—that each of the following errors has on 2017 net income and 2018 net income.

	<u>2017</u>	<u>2018</u>
(a) Equipment (with a useful life of 5 years) was purchased and expensed in 2015.	—	—
(b) Wages payable were not recorded at 12/31/17.	—	—
(c) Equipment purchased in 2017 was expensed.	—	—
(d) 2017 ending inventory was overstated.	—	—
(e) Patent amortization was not recorded in 2018.	—	—

BE22-9 (L01,2) Roundtree Manufacturing Co. is preparing its year-end financial statements and is considering the accounting for the following items.

1. The vice president of sales had indicated that one product line has lost its customer appeal and will be phased out over the next 3 years. Therefore, a decision has been made to lower the estimated lives on related production equipment from the remaining 5 years to 3 years.
2. The Hightone Building was converted from a sales office to offices for the Accounting Department at the beginning of this year. Therefore, the expense related to this building will now appear as an administrative expense rather than a selling expense on the current year's income statement.
3. Estimating the lives of new products in the Leisure Products Division has become very difficult because of the highly competitive conditions in this market. Therefore, the practice of deferring and amortizing preproduction costs has been abandoned in favor of expensing such costs as they are incurred.

Identify and explain whether each of the above items is a change in principle, a change in estimate, or an error.

BE22-10 (L01,3) Palmer Co. is evaluating the appropriate accounting for the following items.

1. Management has decided to switch from the FIFO inventory valuation method to the LIFO inventory valuation method for all inventories.
2. When the year-end physical inventory adjustment was made for the current year, the controller discovered that the prior year's physical inventory sheets for an entire warehouse were mislaid and excluded from last year's count.
3. Palmer's Custom Division manufactures large-scale, custom-designed machinery on a contract basis. Management decided to switch from the completed-contract method to the percentage-of-completion method of accounting for long-term contracts.

Identify and explain whether each of the above items is a change in accounting principle, a change in estimate, or an error.

***BE22-11 (L05)** Simmons Corporation owns stock of Armstrong, Inc. Prior to 2017, the investment was accounted for using the equity method. In early 2017, Simmons sold part of its investment in Armstrong, and began using the fair value method. In 2017, Armstrong earned net income of \$80,000 and paid dividends of \$95,000. Prepare Simmons's entries related to Armstrong's net income and dividends, assuming Simmons now owns 10% of Armstrong's stock.

***BE22-12 (L05)** Oliver Corporation has owned stock of Conrad Corporation since 2014. At December 31, 2017, its balances related to this investment were:

Equity Investments	\$185,000
Fair Value Adjustment (AFS)	34,000 Dr.
Accumulated Unrealized Holding Gain or Loss—Income (recorded in Retained Earnings)	34,000 Cr.

1308 Chapter 22 Accounting Changes and Error Analysis

On January 1, 2018, Oliver purchased additional stock of Conrad Company for \$475,000 and now has significant influence over Conrad. If the equity method had been used in 2014–2017, Oliver’s share of income would have been \$33,000 greater than dividends received. Prepare Oliver’s journal entries to record the purchase of the investment and the change to the equity method.

EXERCISES

E22-1 (L01) (Change in Principle—Long-Term Contracts) Pam Erickson Construction Company changed from the completed-contract to the percentage-of-completion method of accounting for long-term construction contracts during 2018. For tax purposes, the company employs the completed-contract method and will continue this approach in the future. (*Hint:* Adjust all tax consequences through the Deferred Tax Liability account.) The appropriate information related to this change is as follows.

	Pretax Income from:		
	Percentage-of-Completion	Completed-Contract	Difference
2017	\$780,000	\$590,000	\$190,000
2018	700,000	480,000	220,000

Instructions

- Assuming that the tax rate is 35%, what is the amount of net income that would be reported in 2018?
- What entry(ies) are necessary to adjust the accounting records for the change in accounting principle?

E22-2 (L01) (Change in Principle—Inventory Methods) Holder-Webb Company began operations on January 1, 2015, and uses the average-cost method of pricing inventory. Management is contemplating a change in inventory methods for 2018. The following information is available for the years 2015–2017.

	Net Income Computed Using		
	Average-Cost Method	FIFO Method	LIFO Method
2015	\$15,000	\$19,000	\$12,000
2016	18,000	23,000	14,000
2017	20,000	25,000	17,000

Instructions

(Ignore all tax effects.)

- Prepare the journal entry necessary to record a change from the average-cost method to the FIFO method in 2018.
- Determine net income to be reported for 2015, 2016, and 2017, after giving effect to the change in accounting principle.
- Assume Holder-Webb Company used the LIFO method instead of the average-cost method during the years 2015–2017. In 2018, Holder-Webb changed to the FIFO method. Prepare the journal entry necessary to record the change in principle.

E22-3 (L01) (Accounting Change) Taveras Co. decides at the beginning of 2017 to adopt the FIFO method of inventory valuation. Taveras had used the LIFO method for financial reporting since its inception on January 1, 2015, and had maintained records adequate to apply the FIFO method retrospectively. Taveras concluded that FIFO is the preferable inventory method because it reflects the current cost of inventory on the balance sheet. The following table presents the effects of the change in accounting principles on inventory and cost of goods sold.

Date	Inventory Determined by		Cost of Goods Sold Determined by	
	LIFO Method	FIFO Method	LIFO Method	FIFO Method
January 1, 2015	\$ 0	\$ 0	\$ 0	\$ 0
December 31, 2015	100	80	800	820
December 31, 2016	200	240	1,000	940
December 31, 2017	320	390	1,130	1,100

Other information:

- For each year presented, sales are \$3,000 and operating expenses are \$1,000.
- Taveras provides two years of financial statements. Earnings per share information is not required.

Instructions

- Prepare income statements under LIFO and FIFO for 2015, 2016, and 2017.
- Prepare income statements reflecting the retrospective application of the accounting change from the LIFO method to the FIFO method for 2017 and 2016.

- (c) Prepare the note to the financial statements describing the change in method of inventory valuation. In the note, indicate the income statement line items for 2017 and 2016 that were affected by the change in accounting principle.
- (d) Prepare comparative retained earnings statements for 2016 and 2017 under FIFO. Retained earnings reported under LIFO are as follows:

	<u>Retained Earnings Balance</u>
December 31, 2015	\$1,200
December 31, 2016	2,200
December 31, 2017	3,070

E22-4 (L01) (Accounting Change) Gordon Company started operations on January 1, 2012, and has used the FIFO method of inventory valuation since its inception. In 2018, it decides to switch to the average-cost method. You are provided with the following information.

	<u>Net Income</u>		<u>Retained Earnings (Ending Balance)</u>
	<u>Under FIFO</u>	<u>Under Average-Cost</u>	<u>Under FIFO</u>
2012	\$100,000	\$ 90,000	\$100,000
2013	70,000	65,000	160,000
2014	90,000	80,000	235,000
2015	120,000	130,000	340,000
2016	300,000	290,000	590,000
2017	305,000	310,000	780,000

Instructions

- (a) What is the beginning retained earnings balance at January 1, 2014, if Gordon prepares comparative financial statements starting in 2014?
- (b) What is the beginning retained earnings balance at January 1, 2017, if Gordon prepares comparative financial statements starting in 2017?
- (c) What is the beginning retained earnings balance at January 1, 2018, if Gordon prepares single-period financial statements for 2018?
- (d) What is the net income reported by Gordon in the 2017 income statement if it prepares comparative financial statements starting with 2015?

E22-5 (L01) (Accounting Change) Presented below are income statements prepared on a LIFO and FIFO basis for Kenseth Company, which started operations on January 1, 2016. The company presently uses the LIFO method of pricing its inventory and has decided to switch to the FIFO method in 2017. The FIFO income statement is computed in accordance with the requirements of GAAP. Kenseth's profit-sharing agreement with its employees indicates that the company will pay employees 10% of income before profit-sharing. Income taxes are ignored.

	<u>LIFO Basis</u>		<u>FIFO Basis</u>	
	<u>2017</u>	<u>2016</u>	<u>2017</u>	<u>2016</u>
Sales	\$3,000	\$3,000	\$3,000	\$3,000
Cost of goods sold	1,130	1,000	1,100	940
Operating expenses	<u>1,000</u>	<u>1,000</u>	<u>1,000</u>	<u>1,000</u>
Income before profit-sharing	870	1,000	900	1,060
Profit-sharing expense	<u>87</u>	<u>100</u>	<u>96</u>	<u>100</u>
Net income	<u>\$ 783</u>	<u>\$ 900</u>	<u>\$ 804</u>	<u>\$ 960</u>

Instructions

Answer the following questions.

- (a) If comparative income statements are prepared, what net income should Kenseth report in 2016 and 2017?
- (b) Explain why, under the FIFO basis, Kenseth reports \$100 in 2016 and \$96 in 2017 for its profit-sharing expense.
- (c) Assume that Kenseth has a beginning balance of retained earnings at January 1, 2017, of \$8,000 using the LIFO method. The company declared and paid dividends of \$500 in 2017. Prepare the retained earnings statement for 2017, assuming that Kenseth has switched to the FIFO method.

E22-6 (L01) (Change in Principle—Long-Term Contracts) Cullen Construction Company, which began operations in 2017, changed from the completed-contract to the percentage-of-completion method of accounting for long-term construction contracts during 2018. For tax purposes, the company employs the completed-contract method and will continue this approach in the future. The appropriate information related to this change is as follows.

1310 Chapter 22 Accounting Changes and Error Analysis

	Pretax Income		
	Percentage-of-Completion	Completed-Contract	Difference
2017	\$880,000	\$590,000	\$290,000
2018	900,000	480,000	420,000

Instructions

- Assuming that the tax rate is 40%, what is the amount of net income that would be reported in 2018?
- What entry(ies) are necessary to adjust the accounting records for the change in accounting principle?

E22-7 (L01) (Various Changes in Principle—Inventory Methods) Below is the net income of Anita Ferreri Instrument Co., a private corporation, computed under the three inventory methods using a periodic system.

	FIFO	Average-Cost	LIFO
2015	\$26,000	\$24,000	\$20,000
2016	30,000	25,000	21,000
2017	28,000	27,000	24,000
2018	34,000	30,000	26,000

Instructions

(Ignore tax considerations.)

- Assume that in 2018 Ferreri decided to change from the FIFO method to the average-cost method of pricing inventories. Prepare the journal entry necessary for the change that took place during 2018, and show net income reported for 2015, 2016, 2017, and 2018.
- Assume that in 2018 Ferreri, which had been using the LIFO method since incorporation in 2015, changed to the FIFO method of pricing inventories. Prepare the journal entry necessary to record the change in 2018 and show net income reported for 2015, 2016, 2017, and 2018.

E22-8 (L02) (Accounting Changes—Depreciation) Kathleen Cole Inc. acquired the following assets in January of 2015.

Equipment, estimated service life, 5 years; salvage value, \$15,000	\$525,000
Building, estimated service life, 30 years; no salvage value	\$693,000

The equipment has been depreciated using the sum-of-the-years'-digits method for the first 3 years for financial reporting purposes. In 2018, the company decided to change the method of computing depreciation to the straight-line method for the equipment, but no change was made in the estimated service life or salvage value. It was also decided to change the total estimated service life of the building from 30 years to 40 years, with no change in the estimated salvage value. The building is depreciated on the straight-line method.

Instructions

- Prepare the general journal entry to record depreciation expense for the equipment in 2018.
- Prepare the journal entry to record depreciation expense for the building in 2018. (Round all computations to two decimal places.)

E22-9 (L02,3) (Change in Estimate and Error; Financial Statements) Presented below are the comparative income and retained earnings statements for Denise Habbe Inc. for the years 2017 and 2018.

	2018	2017
Sales	\$340,000	\$270,000
Cost of sales	200,000	142,000
Gross profit	140,000	128,000
Expenses	88,000	50,000
Net income	\$ 52,000	\$ 78,000
Retained earnings (Jan. 1)	\$125,000	\$ 72,000
Net income	52,000	78,000
Dividends	(30,000)	(25,000)
Retained earnings (Dec. 31)	\$147,000	\$125,000

The following additional information is provided:

- In 2018, Denise Habbe Inc. decided to switch its depreciation method from sum-of-the-years' digits to the straight-line method. The assets were purchased at the beginning of 2017 for \$100,000 with an estimated useful life of 4 years and no salvage value. (The 2018 income statement contains depreciation expense of \$30,000 on the assets purchased at the beginning of 2017.)
- In 2018, the company discovered that the ending inventory for 2017 was overstated by \$24,000; ending inventory for 2018 is correctly stated.

Instructions

Prepare the revised retained earnings statement for 2017 and 2018, assuming comparative statements. (Ignore income taxes.)

E22-10 (L01,2,3) (Accounting for Accounting Changes and Errors) Listed below are various types of accounting changes and errors.

- _____ 1. Change in a plant asset's salvage value.
- _____ 2. Change due to overstatement of inventory.
- _____ 3. Change from sum-of-the-years'-digits to straight-line method of depreciation.
- _____ 4. Change from presenting unconsolidated to consolidated financial statements.
- _____ 5. Change from LIFO to FIFO inventory method.
- _____ 6. Change in the rate used to compute warranty costs.
- _____ 7. Change from an unacceptable accounting principle to an acceptable accounting principle.
- _____ 8. Change in a patent's amortization period.
- _____ 9. Change from completed-contract to percentage-of-completion method on construction contracts.
- _____ 10. Change from FIFO to average-cost inventory method.

Instructions

For each change or error, indicate how it would be accounted for using the following code letters:

- (a) Accounted for prospectively.
- (b) Accounted for retrospectively.
- (c) Neither of the above.

E22-11 (L02,3) EXCEL (Error and Change in Estimate—Depreciation) Joy Cunningham Co. purchased a machine on January 1, 2015, for \$550,000. At that time, it was estimated that the machine would have a 10-year life and no salvage value. On December 31, 2018, the firm's accountant found that the entry for depreciation expense had been omitted in 2016. In addition, management has informed the accountant that the company plans to switch to straight-line depreciation, starting with the year 2018. At present, the company uses the sum-of-the-years'-digits method for depreciating equipment.

Instructions

Prepare the general journal entries that should be made at December 31, 2018, to record these events. (Ignore tax effects.)

E22-12 (L02) (Depreciation Changes) On January 1, 2014, Jackson Company purchased a building and equipment that have the following useful lives, salvage values, and costs.

Building, 40-year estimated useful life, \$50,000 salvage value, \$800,000 cost
Equipment, 12-year estimated useful life, \$10,000 salvage value, \$100,000 cost

The building has been depreciated under the double-declining-balance method through 2017. In 2018, the company decided to switch to the straight-line method of depreciation. Jackson also decided to change the total useful life of the equipment to 9 years, with a salvage value of \$5,000 at the end of that time. The equipment is depreciated using the straight-line method.

Instructions

- (a) Prepare the journal entry(ies) necessary to record the depreciation expense on the building in 2018.
- (b) Compute depreciation expense on the equipment for 2018.

E22-13 (L02) EXCEL (Change in Estimate—Depreciation) Peter M. Dell Co. purchased equipment for \$510,000 which was estimated to have a useful life of 10 years with a salvage value of \$10,000 at the end of that time. Depreciation has been entered for 7 years on a straight-line basis. In 2018, it is determined that the total estimated life should be 15 years with a salvage value of \$5,000 at the end of that time.

Instructions

- (a) Prepare the entry (if any) to correct the prior years' depreciation.
- (b) Prepare the entry to record depreciation for 2018.

E22-14 (L02) (Change in Estimate—Depreciation) Gerald Englehart Industries changed from the double-declining-balance to the straight-line method in 2018 on all its equipment. There was no change in the assets' salvage values or useful lives. Plant assets, acquired on January 2, 2015, had an original cost of \$1,600,000, with a \$100,000 salvage value and an 8-year estimated useful life. Income before depreciation expense was \$270,000 in 2017 and \$300,000 in 2018.

Instructions

- (a) Prepare the journal entry(ies) to record depreciation expense in 2018.
- (b) Starting with income before depreciation expense, prepare the remaining portion of the income statement for 2017 and 2018.

1312 Chapter 22 Accounting Changes and Error Analysis

E22-15 (L03) (Error Correction Entries) The first audit of the books of Bruce Gingrich Company was made for the year ended December 31, 2018. In examining the books, the auditor found that certain items had been overlooked or incorrectly handled in the last 3 years. These items are:

1. At the beginning of 2016, the company purchased a machine for \$510,000 (salvage value of \$51,000) that had a useful life of 6 years. The bookkeeper used straight-line depreciation but failed to deduct the salvage value in computing the depreciation base for the 3 years.
2. At the end of 2017, the company failed to accrue sales salaries of \$45,000.
3. A tax lawsuit that involved the year 2016 was settled late in 2018. It was determined that the company owed an additional \$85,000 in taxes related to 2016. The company did not record a liability in 2016 or 2017 because the possibility of loss was considered remote, and charged the \$85,000 to a loss account in 2018.
4. Gingrich Company purchased a copyright from another company early in 2016 for \$45,000. Gingrich had not amortized the copyright because its value had not diminished. The copyright has a useful life at purchase of 20 years.
5. In 2018, the company wrote off \$87,000 of inventory considered to be obsolete; this loss was charged directly to Retained Earnings.

Instructions

Prepare the journal entries necessary in 2018 to correct the books, assuming that the books have not been closed. Disregard effects of corrections on income tax.

E22-16 (L03) (Error Analysis and Correcting Entry) You have been engaged to review the financial statements of Gottschalk Corporation. In the course of your examination, you conclude that the bookkeeper hired during the current year is not doing a good job. You notice a number of irregularities as follows.

1. Year-end wages payable of \$3,400 were not recorded because the bookkeeper thought that “they were immaterial.”
2. Accrued vacation pay for the year of \$31,100 was not recorded because the bookkeeper “never heard that you had to do it.”
3. Insurance for a 12-month period purchased on November 1 of this year was charged to insurance expense in the amount of \$2,640 because “the amount of the check is about the same every year.”
4. Reported sales revenue for the year is \$2,120,000. This includes all sales taxes collected for the year. The sales tax rate is 6%. Because the sales tax is forwarded to the state’s Department of Revenue, the Sales Tax Expense account is debited. The bookkeeper thought that “the sales tax is a selling expense.” At the end of the current year, the balance in the Sales Tax Expense account is \$103,400.

Instructions

Prepare the necessary correcting entries, assuming that Gottschalk uses a calendar-year basis.

E22-17 (L03) (Error Analysis and Correcting Entry) The reported net incomes for the first 2 years of Sandra Gustafson Products, Inc., were as follows: 2017, \$147,000; 2018, \$185,000. Early in 2019, the following errors were discovered.

1. Depreciation of equipment for 2017 was overstated \$17,000.
2. Depreciation of equipment for 2018 was understated \$38,500.
3. December 31, 2017, inventory was understated \$50,000.
4. December 31, 2018, inventory was overstated \$16,200.

Instructions

Prepare the correcting entry necessary when these errors are discovered. Assume that the books are closed. (Ignore income tax considerations.)

E22-18 (L03,4) (Error Analysis) Peter Henning Tool Company’s December 31 year-end financial statements contained the following errors.

	<u>December 31, 2017</u>	<u>December 31, 2018</u>
Ending inventory	\$9,600 understated	\$8,100 overstated
Depreciation expense	\$2,300 understated	—

An insurance premium of \$66,000 was prepaid in 2017 covering the years 2017, 2018, and 2019. The entire amount was charged to expense in 2017. In addition, on December 31, 2018, fully depreciated machinery was sold for \$15,000 cash, but the entry was not recorded until 2019. There were no other errors during 2017 or 2018, and no corrections have been made for any of the errors. (Ignore income tax considerations.)

Instructions

- Compute the total effect of the errors on 2018 net income.
- Compute the total effect of the errors on the amount of Henning's working capital at December 31, 2018.
- Compute the total effect of the errors on the balance of Henning's retained earnings at December 31, 2018.

E22-19 (L03,4) (Error Analysis; Correcting Entries) A partial trial balance of Julie Hartsack Corporation is as follows on December 31, 2018.

	Dr.	Cr.
Supplies	\$ 2,700	
Salaries and wages payable		\$ 1,500
Interest receivable	5,100	
Prepaid insurance	90,000	
Unearned rent		-0-
Interest payable		15,000

Additional adjusting data:

- A physical count of supplies on hand on December 31, 2018, totaled \$1,100.
- Through oversight, the Salaries and Wages Payable account was not changed during 2018. Accrued salaries and wages on December 31, 2018, amounted to \$4,400.
- The Interest Receivable account was also left unchanged during 2018. Accrued interest on investments amounts to \$4,350 on December 31, 2018.
- The unexpired portions of the insurance policies totaled \$65,000 as of December 31, 2018.
- \$28,000 was received on January 1, 2018, for the rent of a building for both 2018 and 2019. The entire amount was credited to rent revenue.
- Depreciation on equipment for the year was erroneously recorded as \$5,000 rather than the correct figure of \$50,000.
- A further review of depreciation calculations of prior years revealed that equipment depreciation of \$7,200 was not recorded. It was decided that this oversight should be corrected by a prior period adjustment.

Instructions

- Assuming that the books have not been closed, what are the adjusting entries necessary at December 31, 2018? (Ignore income tax considerations.)
- Assuming that the books have been closed, what are the adjusting entries necessary at December 31, 2018? (Ignore income tax considerations.)
- Repeat the requirements for items 6 and 7, taking into account income tax effects (40% tax rate) and assuming that the books have been closed.

E22-20 (L03,4) (Error Analysis) The before-tax income for Lonnie Holdiman Co. for 2017 was \$101,000 and \$77,400 for 2018. However, the accountant noted that the following errors had been made:

- Sales for 2017 included amounts of \$38,200 which had been received in cash during 2017, but for which the related products were delivered in 2018. Title did not pass to the purchaser until 2018.
- The inventory on December 31, 2017, was understated by \$8,640.
- The bookkeeper in recording interest expense for both 2017 and 2018 on bonds payable made the following entry on an annual basis.

Interest Expense	15,000
Cash	15,000

The bonds have a face value of \$250,000 and pay a stated interest rate of 6%. They were issued at a discount of \$15,000 on January 1, 2017, to yield an effective-interest rate of 7%. (Assume that the effective-yield method should be used.)

- Ordinary repairs to equipment had been erroneously charged to the Equipment account during 2017 and 2018. Repairs in the amount of \$8,500 in 2017 and \$9,400 in 2018 were so charged. The company applies a rate of 10% to the balance in the Equipment account at the end of the year in its determination of depreciation charges.

Instructions

Prepare a schedule showing the determination of corrected income before taxes for 2017 and 2018.

E22-21 (L03,4) (Error Analysis) When the records of Debra Hanson Corporation were reviewed at the close of 2018, the following errors were discovered. For each item, indicate by a check mark in the appropriate column whether the error resulted in an overstatement, an understatement, or had no effect on net income for the years 2017 and 2018.

1314 Chapter 22 Accounting Changes and Error Analysis

Item	2017			2018		
	Over-statement	Under-statement	No Effect	Over-statement	Under-statement	No Effect
1. Failure to record amortization of patent in 2018.						
2. Failure to record the correct amount of ending 2017 inventory. The amount was understated because of an error in calculation.						
3. Failure to record merchandise purchased in 2017. Merchandise was also omitted from ending inventory in 2017 but was not yet sold.						
4. Failure to record accrued interest on notes payable in 2017; that amount was recorded when paid in 2018.						
5. Failure to reflect supplies on hand on balance sheet at end of 2017.						

***E22-22 (L05) (Change from Fair Value to Equity)** On January 1, 2017, Beyonce Co. purchased 25,000 shares (a 10% interest) in Elton John Corp. for \$1,400,000. At the time, the book value and the fair value of John’s net assets were \$13,000,000.

On July 1, 2018, Beyonce paid \$3,040,000 for 50,000 additional shares of John common stock, which represented a 20% investment in John. The fair value of John’s identifiable assets net of liabilities was equal to their carrying amount of \$14,200,000. As a result of this transaction, Beyonce owns 30% of John and can exercise significant influence over John’s operating and financial policies.

John reported the following net income and declared and paid the following dividends.

	<u>Net Income</u>	<u>Dividend per Share</u>
Year ended 12/31/17	\$700,000	None
Six months ended 6/30/18	500,000	None
Six months ended 12/31/18	815,000	\$1.55

Instructions

(Any excess fair value is attributed to goodwill.)

Determine the ending balance that Beyonce Co. should report as its investment in John Corp. at the end of 2018.

***E22-23 (L05) (Change from Equity to Fair Value)** Dan Aykroyd Corp. was a 30% owner of Steve Martin Company, holding 210,000 shares of Martin’s common stock on December 31, 2016. The investment account had the following entries.

Investment in Martin			
1/1/15 Cost	\$3,180,000	12/6/15 Dividend received	\$150,000
12/31/15 Share of income	390,000	12/5/16 Dividend received	240,000
12/31/16 Share of income	510,000		

On January 2, 2017, Aykroyd sold 126,000 shares of Martin for \$3,440,000, thereby losing its significant influence. During the year 2017, Martin experienced the following results of operations and paid the following dividends to Aykroyd.

	<u>Martin Income (Loss)</u>	<u>Dividends Paid to Aykroyd</u>
2017	\$300,000	\$50,400

At December 31, 2017, the fair value of Martin shares held by Aykroyd is \$1,570,000. This is the first reporting date since the January 2 sale.

Instructions

- What effect does the January 2, 2017, transaction have upon Aykroyd's accounting treatment for its investment in Martin?
- Compute the carrying amount of the investment in Martin as of December 31, 2017 (prior to any fair value adjustment).
- Prepare the adjusting entry on December 31, 2017, applying the fair value method to Aykroyd's long-term investment in Martin Company securities.

PROBLEMS

P22-1 (L01) (Change in Principle—Inventory—Periodic) The management of Utrillo Instrument Company had concluded, with the concurrence of its independent auditors, that results of operations would be more fairly presented if Utrillo changed its method of pricing inventory from last-in, first-out (LIFO) to average-cost in 2017. Given below is the 5-year summary of income under LIFO and a schedule of what the inventories would be if stated on the average-cost method.

UTRILLO INSTRUMENT COMPANY					
STATEMENT OF INCOME AND RETAINED EARNINGS					
FOR THE YEARS ENDED MAY 31					
	<u>2013</u>	<u>2014</u>	<u>2015</u>	<u>2016</u>	<u>2017</u>
Sales—net	\$13,964	\$15,506	\$16,673	\$18,221	\$18,898
Cost of goods sold					
Beginning inventory	1,000	1,100	1,000	1,115	1,237
Purchases	13,000	13,900	15,000	15,900	17,100
Ending inventory	(1,100)	(1,000)	(1,115)	(1,237)	(1,369)
Total	<u>12,900</u>	<u>14,000</u>	<u>14,885</u>	<u>15,778</u>	<u>16,968</u>
Gross profit	1,064	1,506	1,788	2,443	1,930
Administrative expenses	700	763	832	907	989
Income before taxes	364	743	956	1,536	941
Income taxes (50%)	182	372	478	768	471
Net income	182	371	478	768	470
Retained earnings—beginning	1,206	1,388	1,759	2,237	3,005
Retained earnings—ending	<u>\$ 1,388</u>	<u>\$ 1,759</u>	<u>\$ 2,237</u>	<u>\$ 3,005</u>	<u>\$ 3,475</u>
Earnings per share	<u>\$1.82</u>	<u>\$3.71</u>	<u>\$4.78</u>	<u>\$7.68</u>	<u>\$4.70</u>

SCHEDULE OF INVENTORY BALANCES USING AVERAGE-COST METHOD						
FOR THE YEARS ENDED MAY 31						
	<u>2012</u>	<u>2013</u>	<u>2014</u>	<u>2015</u>	<u>2016</u>	<u>2017</u>
	\$1,010	\$1,124	\$1,101	\$1,270	\$1,500	\$1,720

Instructions

Prepare comparative statements for the 5 years, assuming that Utrillo changed its method of inventory pricing to average-cost. Indicate the effects on net income and earnings per share for the years involved. Utrillo Instruments started business in 2012. (All amounts except EPS are rounded up to the nearest dollar.)

P22-2 (L01,2,3) EXCEL GROUPWORK (Change in Estimate and Error Correction) Holtzman Company is in the process of preparing its financial statements for 2017. Assume that no entries for depreciation have been recorded in 2017. The following information related to depreciation of fixed assets is provided to you.

- Holtzman purchased equipment on January 2, 2014, for \$85,000. At that time, the equipment had an estimated useful life of 10 years with a \$5,000 salvage value. The equipment is depreciated on a straight-line basis. On January 2, 2017, as a result of additional information, the company determined that the equipment has a remaining useful life of 4 years with a \$3,000 salvage value.
- During 2017, Holtzman changed from the double-declining-balance method for its building to the straight-line method. The building originally cost \$300,000. It had a useful life of 10 years and a salvage value of \$30,000. The following computations present depreciation on both bases for 2015 and 2016.

	<u>2016</u>	<u>2015</u>
Straight-line	\$27,000	\$27,000
Declining-balance	48,000	60,000

1316 Chapter 22 Accounting Changes and Error Analysis

3. Holtzman purchased a machine on July 1, 2015, at a cost of \$120,000. The machine has a salvage value of \$16,000 and a useful life of 8 years. Holtzman's bookkeeper recorded straight-line depreciation in 2015 and 2016 but failed to consider the salvage value.

Instructions

- (a) Prepare the journal entries to record depreciation expense for 2017 and correct any errors made to date related to the information provided. (Ignore taxes.)
- (b) Show comparative net income for 2016 and 2017. Income before depreciation expense was \$300,000 in 2017, and was \$310,000 in 2016. (Ignore taxes.)

P22-3 (L01,2,3) (Comprehensive Accounting Change and Error Analysis Problem) Botticelli Inc. was organized in late 2015 to manufacture and sell hosiery. At the end of its fourth year of operation, the company has been fairly successful, as indicated by the following reported net incomes.

2015	\$140,000 ^a	2017	\$205,000
2016	160,000 ^b	2018	276,000

^aIncludes a \$10,000 increase because of change in bad debt experience rate.

^bIncludes a gain of \$30,000.

The company has decided to expand operations and has applied for a sizable bank loan. The bank officer has indicated that the records should be audited and presented in comparative statements to facilitate analysis by the bank. Botticelli Inc. therefore hired the auditing firm of Check & Doublecheck Co. and has provided the following additional information.

1. In early 2016, Botticelli Inc. changed its estimate from 2% of sales to 1% on the amount of bad debt expense to be charged to operations. Bad debt expense for 2015, if a 1% rate had been used, would have been \$10,000. The company therefore restated its net income for 2015.
2. In 2018, the auditor discovered that the company had changed its method of inventory pricing from LIFO to FIFO. The effect on the income statements for the previous years is as follows.

	2015	2016	2017	2018
Net income unadjusted—LIFO basis	\$140,000	\$160,000	\$205,000	\$276,000
Net income unadjusted—FIFO basis	155,000	165,000	215,000	260,000
	<u>\$ 15,000</u>	<u>\$ 5,000</u>	<u>\$ 10,000</u>	<u>\$ (16,000)</u>

3. In 2018, the auditor discovered that:
- (a) The company incorrectly overstated the ending inventory (under both LIFO and FIFO) by \$14,000 in 2017.
- (b) A dispute developed in 2016 with the Internal Revenue Service over the deductibility of entertainment expenses. In 2015, the company was not permitted these deductions, but a tax settlement was reached in 2018 that allowed these expenses. As a result of the court's finding, tax expenses in 2018 were reduced by \$60,000.

Instructions

- (a) Indicate how each of these changes or corrections should be handled in the accounting records. (Ignore income tax considerations.)
- (b) Present net income as reported in comparative income statements for the years 2015 to 2018.

P22-4 (L01,2,3) (Error Corrections and Accounting Changes) Penn Company is in the process of adjusting and correcting its books at the end of 2017. In reviewing its records, the following information is compiled.

1. Penn has failed to accrue sales commissions payable at the end of each of the last 2 years, as follows.

December 31, 2016	\$3,500
December 31, 2017	\$2,500

2. In reviewing the December 31, 2017, inventory, Penn discovered errors in its inventory-taking procedures that have caused inventories for the last 3 years to be incorrect, as follows.

December 31, 2015	Understated	\$16,000
December 31, 2016	Understated	\$19,000
December 31, 2017	Overstated	\$ 6,700

Penn has already made an entry that established the incorrect December 31, 2017, inventory amount.

3. At December 31, 2017, Penn decided to change the depreciation method on its office equipment from double-declining-balance to straight-line. The equipment had an original cost of \$100,000 when purchased on January 1, 2015. It has a 10-year useful life and no salvage value. Depreciation expense recorded prior to 2017 under the double-declining-balance

method was \$36,000. Penn has already recorded 2017 depreciation expense of \$12,800 using the double-declining-balance method.

4. Before 2017, Penn accounted for its income from long-term construction contracts on the completed-contract basis. Early in 2017, Penn changed to the percentage-of-completion basis for accounting purposes. It continues to use the completed-contract method for tax purposes. Income for 2017 has been recorded using the percentage-of-completion method. The following information is available.

	Pretax Income	
	Percentage-of-Completion	Completed-Contract
Prior to 2017	\$150,000	\$105,000
2017	60,000	20,000

Instructions

Prepare the journal entries necessary at December 31, 2017, to record the above corrections and changes. The books are still open for 2017. The income tax rate is 40%. Penn has not yet recorded its 2017 income tax expense and payable amounts so current-year tax effects may be ignored. Prior-year tax effects must be considered in item 4.

P22-5 (LO2) GROUPWORK ETHICS (Accounting Changes) Aston Corporation performs year-end planning in November of each year before its calendar year ends in December. The preliminary estimated net income is \$3 million. The CFO, Rita Warren, meets with the company president, J. B. Aston, to review the projected numbers. She presents the following projected information.

ASTON CORPORATION PROJECTED INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2017		
Sales		\$28,995,000
Interest revenue		5,000
Cost of goods sold	\$14,000,000	
Depreciation	2,600,000	
Operating expenses	6,400,000	23,000,000
Income before income tax		6,000,000
Income tax		3,000,000
Net income		\$ 3,000,000

ASTON CORPORATION SELECTED BALANCE SHEET INFORMATION AT DECEMBER 31, 2017		
Estimated cash balance		\$ 5,000,000
Available-for-sale debt investments (at cost)		10,000,000
Fair value adjustment (1/1/17)		—0—

Estimated fair value at December 31, 2017:

Security	Cost	Estimated Fair Value
A	\$ 2,000,000	\$ 2,200,000
B	4,000,000	3,900,000
C	3,000,000	3,100,000
D	1,000,000	1,800,000
Total	\$10,000,000	\$11,000,000

Other information at December 31, 2017:

Equipment	\$3,000,000
Accumulated depreciation (5-year SL)	1,200,000
New robotic equipment (purchased 1/1/17)	5,000,000
Accumulated depreciation (5-year DDB)	2,000,000

The corporation has never used robotic equipment before, and Warren assumed an accelerated method because of the rapidly changing technology in robotic equipment. The company normally uses straight-line depreciation for production equipment.

Aston explains to Warren that it is important for the corporation to show a \$7,000,000 income before taxes because Aston receives a \$1,000,000 bonus if the income before taxes and bonus reaches \$7,000,000. Aston also does not want the company to pay more than \$3,000,000 in income taxes to the government.

1318 Chapter 22 Accounting Changes and Error Analysis

Instructions

- What can Warren do within GAAP to accommodate the president's wishes to achieve \$7,000,000 in income before taxes and bonus? Present the revised income statement based on your decision.
- Are the actions ethical? Who are the stakeholders in this decision, and what effect do Warren's actions have on their interests?

P22-6 (L01,3,4) EXCEL (Accounting Change and Error Analysis) On December 31, 2017, before the books were closed, the management and accountants of Madrasa Inc. made the following determinations about three pieces of equipment.

- Equipment A was purchased January 2, 2014. It originally cost \$540,000 and, for depreciation purposes, the straight-line method was originally chosen. The asset was originally expected to be useful for 10 years and have a zero salvage value. In 2017, the decision was made to change the depreciation method from straight-line to sum-of-the-years'-digits, and the estimates relating to useful life and salvage value remained unchanged.
- Equipment B was purchased January 3, 2013. It originally cost \$180,000 and, for depreciation purposes, the straight-line method was chosen. The asset was originally expected to be useful for 15 years and have a zero residual value. In 2017, the decision was made to shorten the total life of this asset to 9 years and to estimate the residual value at \$3,000.
- Equipment C was purchased January 5, 2013. The asset's original cost was \$160,000, and this amount was entirely expensed in 2013. This particular asset has a 10-year useful life and no residual value. The straight-line method was chosen for depreciation purposes.

Additional data:

- Income in 2017 before depreciation expense amounted to \$400,000.
- Depreciation expense on assets other than A, B, and C totaled \$55,000 in 2017.
- Income in 2016 was reported at \$370,000.
- Ignore all income tax effects.
- 100,000 shares of common stock were outstanding in 2016 and 2017.

Instructions

- Prepare all necessary entries in 2017 to record these determinations.
- Prepare comparative retained earnings statements for Madrasa Inc. for 2016 and 2017. The company had retained earnings of \$200,000 at December 31, 2015.

P22-7 (L03,4) GROUPWORK (Error Corrections) You have been assigned to examine the financial statements of Zarle Company for the year ended December 31, 2017. You discover the following situations.

- Depreciation of \$3,200 for 2017 on delivery vehicles was not recorded.
- The physical inventory count on December 31, 2016, improperly excluded merchandise costing \$19,000 that had been temporarily stored in a public warehouse. Zarle uses a periodic inventory system.
- A collection of \$5,600 on account from a customer received on December 31, 2017, was not recorded until January 2, 2018.
- In 2017, the company sold for \$3,700 fully depreciated equipment that originally cost \$25,000. The company credited the proceeds from the sale to the Equipment account.
- During November 2017, a competitor company filed a patent-infringement suit against Zarle claiming damages of \$220,000. The company's legal counsel has indicated that an unfavorable verdict is probable and a reasonable estimate of the court's award to the competitor is \$125,000. The company has not reflected or disclosed this situation in the financial statements.
- Zarle has a portfolio of trading investments. No entry has been made to adjust to market. Information on cost and fair value is as follows.

	<u>Cost</u>	<u>Fair Value</u>
December 31, 2016	\$95,000	\$95,000
December 31, 2017	\$84,000	\$82,000

- At December 31, 2017, an analysis of payroll information shows accrued salaries of \$12,200. The Salaries and Wages Payable account had a balance of \$16,000 at December 31, 2017, which was unchanged from its balance at December 31, 2016.
- A large piece of equipment was purchased on January 3, 2017, for \$40,000 and was charged to Maintenance and Repairs Expense. The equipment is estimated to have a service life of 8 years and no residual value. Zarle normally uses the straight-line depreciation method for this type of equipment.
- A \$12,000 insurance premium paid on July 1, 2016, for a policy that expires on June 30, 2019, was charged to insurance expense.
- A trademark was acquired at the beginning of 2016 for \$50,000. No amortization has been recorded since its acquisition. The maximum allowable amortization period is 10 years.

Instructions

Assume the trial balance has been prepared but the books have not been closed for 2017. Assuming all amounts are material, prepare journal entries showing the adjustments that are required. (Ignore income tax considerations.)

P22-8 (L03,4) GROUPWORK (Comprehensive Error Analysis) On March 5, 2018, you were hired by Hemingway Inc., a closely held company, as a staff member of its newly created internal auditing department. While reviewing the company's records for 2016 and 2017, you discover that no adjustments have yet been made for the following items.

Items

- Interest income of \$14,100 was not accrued at the end of 2016. It was recorded when received in February 2017.
- A computer costing \$4,000 was expensed when purchased on July 1, 2016. It is expected to have a 4-year life with no salvage value. The company typically uses straight-line depreciation for all fixed assets.
- Research and development costs of \$33,000 were incurred early in 2016. They were capitalized and were to be amortized over a 3-year period. Amortization of \$11,000 was recorded for 2016 and \$11,000 for 2017.
- On January 2, 2016, Hemingway leased a building for 5 years at a monthly rental of \$8,000. On that date, the company paid the following amounts, which were expensed when paid.

Security deposit	\$20,000
First month's rent	8,000
Last month's rent	8,000
	<u>\$36,000</u>

- The company received \$36,000 from a customer at the beginning of 2016 for services that it is to perform evenly over a 3-year period beginning in 2016. None of the amount received was reported as unearned revenue at the end of 2016.
- Merchandise inventory costing \$18,200 was in the warehouse at December 31, 2016, but was incorrectly omitted from the physical count at that date. The company uses the periodic inventory method.

Instructions

Indicate the effect of any errors on the net income figure reported on the income statement for the year ending December 31, 2016, and the retained earnings figure reported on the balance sheet at December 31, 2017. Assume all amounts are material, and ignore income tax effects. Using the following format, enter the appropriate dollar amounts in the appropriate columns. Consider each item independent of the other items. It is not necessary to total the columns on the grid.

Item	Net Income for 2016		Retained Earnings at 12/31/17	
	Understated	Overstated	Understated	Overstated

(CIA adapted)

P22-9 (L03,4) (Error Analysis) Lowell Corporation has used the accrual basis of accounting for several years. A review of the records, however, indicates that some expenses and revenues have been handled on a cash basis because of errors made by an inexperienced bookkeeper. Income statements prepared by the bookkeeper reported \$29,000 net income for 2016 and \$37,000 net income for 2017. Further examination of the records reveals that the following items were handled improperly.

- Rent was received from a tenant in December 2016. The amount, \$1,000, was recorded as revenue at that time even though the rental pertained to 2017.
- Salaries and wages payable on December 31 have been consistently omitted from the records of that date and have been entered as expenses when paid in the following year. The amounts of the accruals recorded in this manner were:

December 31, 2015	\$1,100
December 31, 2016	1,200
December 31, 2017	940

- Invoices for supplies purchased have been charged to expense accounts when received. Inventories of supplies on hand at the end of each year have been ignored, and no entry has been made for them.

December 31, 2015	\$1,300
December 31, 2016	940
December 31, 2017	1,420

Instructions

Prepare a schedule that will show the corrected net income for the years 2016 and 2017. All items listed should be labeled clearly. (Ignore income tax considerations.)

1320 Chapter 22 Accounting Changes and Error Analysis

P22-10 (L03,4) (Error Analysis and Correcting Entries) You have been asked by a client to review the records of Roberts Company, a small manufacturer of precision tools and machines. Your client is interested in buying the business, and arrangements have been made for you to review the accounting records. Your examination reveals the following information.

1. Roberts Company commenced business on April 1, 2015, and has been reporting on a fiscal year ending March 31. The company has never been audited, but the annual statements prepared by the bookkeeper reflect the following income before closing and before deducting income taxes.

Year Ended March 31	Income Before Taxes
2016	\$ 71,600
2017	111,400
2018	103,580

2. A relatively small number of machines have been shipped on consignment. These transactions have been recorded as ordinary sales and billed as such. On March 31 of each year, machines billed and in the hands of consignees amounted to:

2016	\$6,500
2017	none
2018	5,590

Sales price was determined by adding 25% to cost. Assume that the consigned machines are sold the following year.

3. On March 30, 2017, two machines were shipped to a customer on a C.O.D. basis. The sale was not entered until April 5, 2017, when cash was received for \$6,100. The machines were not included in the inventory at March 31, 2017. (Title passed on March 30, 2017.)
4. All machines are sold subject to a 5-year warranty. It is estimated that the expense ultimately to be incurred in connection with the warranty will amount to $\frac{1}{2}$ of 1% of sales. The company has charged an expense account for warranty costs incurred.

Sales per books and warranty costs were as follows.

Year Ended March 31	Sales	Warranty Expense for Sales Made in			
		2016	2017	2018	Total
2016	\$ 940,000	\$760			\$ 760
2017	1,010,000	360	\$1,310		1,670
2018	1,795,000	320	1,620	\$1,910	3,850

5. Bad debts have been recorded on a direct write-off basis. Experience of similar enterprises indicates that losses will approximate 1% of receivables. Bad debts written off were:

	Bad Debts Incurred on Sales Made in			Total	Bad Debt Expense Based on 1% of Receivables
	2016	2017	2018		
2016	\$750			\$ 750	\$2,334
2017	800	\$ 520		1,320	2,557
2018	350	1,800	\$1,700	3,850	4,458

6. The bank deducts 6% on all contracts financed. Of this amount, $\frac{1}{2}$ % is placed in a reserve to the credit of Roberts Company that is refunded to Roberts as finance contracts are paid in full. (Thus, Roberts should have a receivable for these payments and should record revenue when the net balance is remitted each year.) The reserve established by the bank has not been reflected in the books of Roberts. The excess of credits over debits (net increase) to the reserve account with Roberts on the books of the bank for each fiscal year were as follows.

2016	\$ 3,000
2017	3,900
2018	5,100
	<u>\$12,000</u>

7. Commissions on sales have been entered when paid. Commissions payable on March 31 of each year were as follows.

2016	\$1,400
2017	900
2018	1,120

8. A review of the corporate minutes reveals the manager is entitled to a bonus of 1% of the income before deducting income taxes and the bonus. The bonuses have never been recorded or paid.

Instructions

- (a) Present a schedule showing the revised income before income taxes for each of the years ended March 31, 2016, 2017, and 2018. (Make computations to the nearest whole dollar.)

- (b) Prepare the journal entry or entries you would give the bookkeeper to correct the books. Assume the books have not yet been closed for the fiscal year ended March 31, 2018. Disregard correction of income taxes.

(AICPA adapted)

***P22-11 (L05) (Fair Value to Equity Method with Goodwill)** On January 1, 2017, Millay Inc. paid \$700,000 for 10,000 shares of Genso Company's voting common stock, which was a 10% interest in Genso. At that date, the net assets of Genso totaled \$6,000,000. The fair values of all of Genso's identifiable assets and liabilities were equal to their book values. Millay does not have the ability to exercise significant influence over the operating and financial policies of Genso. Millay received dividends of \$1.50 per share from Genso on October 1, 2017. Genso reported net income of \$550,000 for the year ended December 31, 2017.

On July 1, 2018, Millay paid \$2,325,000 for 30,000 additional shares of Genso Company's voting common stock which represents a 30% investment in Genso. The fair values of all of Genso's identifiable assets net of liabilities were equal to their book values of \$6,550,000. As a result of this transaction, Millay has the ability to exercise significant influence over the operating and financial policies of Genso. Millay received dividends of \$2.00 per share from Genso on April 1, 2018, and \$2.50 per share on October 1, 2018. Genso reported net income of \$650,000 for the year ended December 31, 2018, and \$350,000 for the 6 months ended December 31, 2018.

Instructions

(For both purchases, assume any excess of cost over book value is due to goodwill.)

- Prepare a schedule showing the income or loss before income taxes for the year ended December 31, 2017, that Millay should report from its investment in Genso in its income statement issued in March 2018.
- During March 2019, Millay issues comparative financial statements for 2017 and 2018. Prepare schedules showing the income or loss before income taxes for the years ended December 31, 2017 and 2018, that Millay should report from its investment in Genso.

(AICPA adapted)

***P22-12 (L05) (Change from Fair Value to Equity Method)** On January 3, 2016, Martin Company purchased for \$500,000 cash a 10% interest in Renner Corp. On that date, the net assets of Renner had a book value of \$3,700,000. The excess of cost over the underlying equity in net assets is attributable to undervalued depreciable assets having a remaining life of 10 years from the date of Martin's purchase.

The fair value of Martin's investment in Renner securities is as follows: December 31, 2016, \$560,000, and December 31, 2017, \$515,000.

On January 2, 2018, Martin purchased an additional 30% of Renner's stock for \$1,545,000 cash when the book value of Renner's net assets was \$4,150,000. The excess was attributable to depreciable assets having a remaining life of 8 years.

During 2016, 2017, and 2018, the following occurred.

	Renner Net Income	Dividends Paid by Renner to Martin
2016	\$350,000	\$15,000
2017	450,000	20,000
2018	550,000	70,000

Instructions

On the books of Martin Company, prepare all journal entries in 2016, 2017, and 2018 that relate to its investment in Renner Corp., reflecting the data above and a change from the fair value method to the equity method.

CONCEPTS FOR ANALYSIS

CA22-1 GROUPWORK (Analysis of Various Accounting Changes and Errors) Mathys Inc. has recently hired a new independent auditor, Karen Ogleby, who says she wants "to get everything straightened out." Consequently, she has proposed the following accounting changes in connection with Mathys Inc.'s 2017 financial statements.

- At December 31, 2016, the client had a receivable of \$820,000 from Hendricks Inc. on its balance sheet. Hendricks Inc. has gone bankrupt, and no recovery is expected. The client proposes to write off the receivable as a prior period item.
- The client proposes the following changes in depreciation policies.
 - For office furniture and fixtures, it proposes to change from a 10-year useful life to an 8-year life. If this change had been made in prior years, retained earnings at December 31, 2016, would have been \$250,000 less. The effect of the change on 2017 income alone is a reduction of \$60,000.
 - For its new equipment in the leasing division, the client proposes to adopt the sum-of-the-years'-digits depreciation method. The client had never used SYD before. The first year the client operated a leasing division was 2017. If straight-line depreciation were used, 2017 income would be \$110,000 greater.
- In preparing its 2016 statements, one of the client's bookkeepers overstated ending inventory by \$235,000 because of a mathematical error. The client proposes to treat this item as a prior period adjustment.

1322 Chapter 22 Accounting Changes and Error Analysis

4. In the past, the client has spread preproduction costs in its furniture division over 5 years. Because its latest furniture is of the “fad” type, it appears that the largest volume of sales will occur during the first 2 years after introduction. Consequently, the client proposes to amortize preproduction costs on a per-unit basis, which will result in expensing most of such costs during the first 2 years after the furniture’s introduction. If the new accounting method had been used prior to 2017, retained earnings at December 31, 2016, would have been \$375,000 less.
5. For the nursery division, the client proposes to switch from FIFO to LIFO inventories because it believes that LIFO will provide a better matching of current costs with revenues. The effect of making this change on 2017 earnings will be an increase of \$320,000. The client says that the effect of the change on December 31, 2016, retained earnings cannot be determined.
6. To achieve an appropriate recognition of revenues and expenses in its building construction division, the client proposes to switch from the completed-contract method of accounting to the percentage-of-completion method. Had the percentage-of-completion method been employed in all prior years, retained earnings at December 31, 2016, would have been \$1,075,000 greater.

Instructions

- (a) For each of the changes described above, decide whether:
 - (1) The change involves an accounting principle, accounting estimate, or correction of an error.
 - (2) Restatement of opening retained earnings is required.
- (b) What would be the proper adjustment to the December 31, 2016, retained earnings?

CA22-2 (Analysis of Various Accounting Changes and Errors) Various types of accounting changes can affect the financial statements of a business enterprise differently. Assume that the following list describes changes that have a material effect on the financial statements for the current year of your business enterprise.

1. A change from the completed-contract method to the percentage-of-completion method of accounting for long-term construction-type contracts.
2. A change in the estimated useful life of previously recorded fixed assets as a result of newly acquired information.
3. A change from deferring and amortizing preproduction costs to recording such costs as an expense when incurred because future benefits of the costs have become doubtful. The new accounting method was adopted in recognition of the change in estimated future benefits.
4. A change from including the employer share of FICA taxes with payroll tax expenses to including it with “Retirement benefits” on the income statement.
5. Correction of a mathematical error in inventory pricing made in a prior period.
6. A change from presentation of statements of individual companies to presentation of consolidated statements.
7. A change in the method of accounting for leases for tax purposes to conform with the financial accounting method. As a result, both deferred and current taxes payable changed substantially.
8. A change from the FIFO method of inventory pricing to the LIFO method of inventory pricing.

Instructions

Identify the type of change that is described in each item above and indicate whether the prior year’s financial statements should be recast when presented in comparative form with the current year’s financial statements.

CA22-3 (Analysis of Three Accounting Changes and Errors) The following are three independent, unrelated sets of facts relating to accounting changes.

Situation 1: Sanford Company is in the process of having its first audit. The company has used the cash basis of accounting for revenue recognition. Sanford president, B. J. Jimenez, is willing to change to the accrual method of revenue recognition.

Situation 2: Hopkins Co. decides in January 2018 to change from FIFO to weighted-average pricing for its inventories.

Situation 3: Marshall Co. determined that the depreciable lives of its fixed assets are too long at present to fairly match the cost of the fixed assets with the revenue produced. The company decided at the beginning of the current year to reduce the depreciable lives of all of its existing fixed assets by 5 years.

Instructions

For each of the situations described, provide the information indicated below.

- (a) Type of accounting change.
- (b) Manner of reporting the change under current generally accepted accounting principles, including a discussion where applicable of how amounts are computed.
- (c) Effect of the change on the balance sheet and income statement.

CA22-4 WRITING (Analysis of Various Accounting Changes and Errors) Katherine Irving, controller of Lotan Corp., is aware of a pronouncement on accounting changes. After reading the pronouncement, she is confused about what action should be taken on the following items related to Lotan Corp. for the year 2017.

1. In 2017, Lotan decided to change its policy on accounting for certain marketing costs. Previously, the company had chosen to defer and amortize all marketing costs over at least 5 years because Lotan believed that a return on these expenditures did not occur immediately. Recently, however, the time differential has considerably shortened, and Lotan is now expensing the marketing costs as incurred.
2. In 2017, the company examined its entire policy relating to the depreciation of plant equipment. Plant equipment had normally been depreciated over a 15-year period, but recent experience has indicated that the company was incorrect in its estimates and that the assets should be depreciated over a 20-year period.
3. One division of Lotan Corp., Hawthorne Co., has consistently shown an increasing net income from period to period. On closer examination of its operating statement, it is noted that bad debt expense and inventory obsolescence charges are much lower than in other divisions. In discussing this with the controller of this division, it has been learned that the controller has increased his net income each period by knowingly making low estimates related to the write-off of receivables and inventory.
4. In 2017, the company purchased new machinery that should increase production dramatically. The company has decided to depreciate this machinery on an accelerated basis, even though other machinery is depreciated on a straight-line basis.
5. All equipment sold by Lotan is subject to a 3-year warranty. It has been estimated that the expense ultimately to be incurred on these machines is 1% of sales. In 2017, because of a production breakthrough, it is now estimated that $\frac{1}{2}$ of 1% of sales is sufficient. In 2015 and 2016, warranty expense was computed as \$64,000 and \$70,000, respectively. The company now believes that these warranty costs should be reduced by 50%.
6. In 2017, the company decided to change its method of inventory pricing from average-cost to the FIFO method. The effect of this change on prior years is to increase 2015 income by \$65,000 and increase 2016 income by \$20,000.

Instructions

Katherine Irving has come to you, as her CPA, for advice about the situations above. Prepare a report, indicating the appropriate accounting treatment that should be given for each of these situations.

CA22-5 WRITING (Change in Principle, Estimate) As a certified public accountant, you have been contacted by Joe Davison, CEO of Sports-Pro Athletics, Inc., a manufacturer of a variety of athletic equipment. He has asked you how to account for the following changes.

1. Sports-Pro appropriately changed its depreciation method for its machinery from the double-declining-balance method to the units-of-production method effective January 1, 2017.
2. Effective January 1, 2017, Sports-Pro appropriately changed the salvage values used in computing depreciation for its office equipment.
3. On December 31, 2017, Sports-Pro appropriately changed the specific subsidiaries constituting the group of companies for which consolidated financial statements are presented.

Instructions

Write a 1–1.5 page letter to Joe Davison explaining how each of the above changes should be presented in the December 31, 2017, financial statements.

CA22-6 ETHICS (Change in Estimate) Mike Crane is an audit senior of a large public accounting firm who has just been assigned to the Frost Corporation's annual audit engagement. Frost has been a client of Crane's firm for many years. Frost is a fast-growing business in the commercial construction industry. In reviewing the fixed asset ledger, Crane discovered a series of unusual accounting changes, in which the useful lives of assets, depreciated using the straight-line method, were substantially lowered near the midpoint of the original estimate. For example, the useful life of one dump truck was changed from 10 to 6 years during its fifth year of service. Upon further investigation, Mike was told by Kevin James, Frost's accounting manager, "I don't really see your problem. After all, it's perfectly legal to change an accounting estimate. Besides, our CEO likes to see big earnings!"

Instructions

Answer the following questions.

- (a) What are the ethical issues concerning Frost's practice of changing the useful lives of fixed assets?
- (b) Who could be harmed by Frost's unusual accounting changes?
- (c) What should Crane do in this situation?

USING YOUR JUDGMENT

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

1324 Chapter 22 Accounting Changes and Error Analysis**Instructions**

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- Were there changes in accounting principles reported by P&G during the three years covered by its income statements (2012–2014)? If so, describe the nature of the change and the year of change.
- What types of estimates did P&G discuss in 2014?

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.**

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- Identify the changes in accounting principles reported by Coca-Cola during the 3 years covered by its income statements (2012–2014). Describe the nature of the change and the year of change.
- Identify the changes in accounting principles reported by PepsiCo during the 3 years covered by its income statements (2012–2014). Describe the nature of the change and the year of change.
- For each change in accounting principle by Coca-Cola and PepsiCo, identify, if possible, the cumulative effect of each change on prior years and the effect on operating results in the year of change.

Accounting, Analysis, and Principles

In preparation for significant expansion of its international operations, ABC Co. has adopted a plan to gradually shift to the same accounting methods as used by its international competitors. Part of this plan includes a switch from LIFO inventory accounting to FIFO (recall that IFRS does not allow LIFO). ABC decides to make the switch to FIFO at January 1, 2017. The following data pertains to ABC's 2017 financial statements (in millions of dollars).

Sales	\$550
Inventory purchases	350
12/31/17 inventory (using FIFO)	580
Compensation expense	17

All sales and purchases were with cash. All of 2017's compensation expense was paid with cash. (Ignore taxes.) ABC's property, plant, and equipment cost \$400 million and has an estimated useful life of 10 years with no salvage value.

ABC Co. reported the following for fiscal 2016 (in millions of dollars):

ABC CO.					
BALANCE SHEET AT DECEMBER 31, 2016					
	<u>2016</u>	<u>2015</u>		<u>2016</u>	<u>2015</u>
Cash	\$ 365	\$ 200	Common stock	\$ 500	\$ 500
Inventory	500	480	Retained earnings	685	540
Property, plant, and equipment	400	400			
Accumulated depreciation	(80)	(40)			
Total assets	<u>\$1,185</u>	<u>\$1,040</u>	Total equity	<u>\$1,185</u>	<u>\$1,040</u>
ABC CO.					
INCOME STATEMENT					
FOR THE YEAR ENDED DECEMBER 31, 2016					
	<u>2016</u>				
Sales	\$ 500				
Cost of goods sold	(300)				
Depreciation expense	(40)				
Compensation expense	(15)				
Net income	<u>\$ 145</u>				
Summary of Significant Accounting Policies					
Inventory: The company accounts for inventory by the LIFO method. The current cost of the company's inventory, which approximates FIFO, was \$60 and \$50 higher at the end of fiscal 2016 and 2015, respectively, than those reported in the balance sheet.					

Accounting

Prepare ABC's December 31, 2017, balance sheet and an income statement for the year ended December 31, 2017. In columns beside 2017's numbers, include 2016's numbers *as they would appear in the 2017 financial statements* for comparative purposes.

Analysis

Compute ABC's inventory turnover for 2016 and 2017 under both LIFO and FIFO. Assume averages are equal to year-end balances where necessary. What causes the differences in this ratio between LIFO and FIFO?

Principles

Briefly explain, in terms of the principles discussed in Chapter 2, why GAAP requires that companies that change accounting methods recast prior year's financial statement data.

Codification Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- CE22-1** Access the glossary ("Master Glossary") to answer the following.
- (a) What is a change in accounting estimate?
 - (b) What is a change in accounting principle?
 - (c) What is a restatement?
 - (d) What is the definition of "retrospective application"?
- CE22-2** When a company has to restate its financial statements to correct an error, what information must the company disclose?
- CE22-3** What reporting requirements does retrospective application require?
- CE22-4** If a company registered with the SEC justifies a change in accounting method as preferable under the circumstances, and the circumstances change, can that company switch back to its prior method of accounting before the change? Why or why not?

Codification Research Case

As part of the year-end accounting process and review of operating policies, Cullen Co. is considering a change in the accounting for its equipment from the straight-line method to an accelerated method. Your supervisor wonders how the company will report this change in principle. He read in a newspaper article that the FASB has issued a standard in this area and has changed GAAP for a “change in estimate that is effected by a change in accounting principle.” (Thus, the accounting may be different from what he learned in intermediate accounting.) Your supervisor wants you to research the authoritative guidance on a change in accounting principle related to depreciation methods.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- What are the accounting and reporting guidelines for a change in accounting principle related to depreciation methods?
- What are the conditions that justify a change in depreciation method, as contemplated by Cullen Co.?
- What guidance does the SEC provide concerning the impact that recently issued accounting standards will have on the financial statements in a future period?

IFRS Insights

LEARNING OBJECTIVE 6

Compare the procedures for accounting changes and error analysis under GAAP and IFRS.

ACCOUNTING CHANGES AND ERRORS

The IFRS addressing accounting and reporting for changes in accounting principles, changes in estimates, and errors is *IAS 8* (“Accounting Policies, Changes in Accounting Estimates and Errors”). Various presentation issues related to restatements are addressed in *IAS 1* (“Presentation of Financial Statements”). As indicated in the chapter, the FASB has issued guidance on changes in accounting principles, changes in estimates, and corrections of errors, which essentially converges GAAP to *IAS 8*.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to the procedures for accounting changes.

Similarities

- The accounting for changes in estimates is similar between GAAP and IFRS.
- Under GAAP and IFRS, if determining the effect of a change in accounting policy is considered impracticable, then a company should report the effect of the change in the period in which it believes it practicable to do so, which may be the current period.

Differences

- One area in which GAAP and IFRS differ is the reporting of error corrections in previously issued financial statements. While both sets of standards require restatement, GAAP is an absolute standard—that is, there is no exception to this rule.
- Under IFRS, the impracticability exception applies both to changes in accounting principles and to the correction of errors. Under GAAP, this exception applies only to changes in accounting principle.
- IFRS (*IAS 8*) does not specifically address the accounting and reporting for indirect effects of changes in accounting principles. As indicated in the chapter, GAAP has detailed guidance on the accounting and reporting of indirect effects.

ABOUT THE NUMBERS

Direct and Indirect Effects of Changes

Are there other effects that a company should report when it makes a change in accounting policy? For example, what happens when a company like Lancer (see pages 1276–1278) has a bonus plan based on net income and the prior year's net income changes when FIFO is retrospectively applied? Should Lancer also change the reported amount of bonus expense? Or, what happens if we had not ignored income taxes in the Lancer example? Should Lancer adjust net income, given that taxes will be different under average-cost and FIFO in prior periods? The answers depend on whether the effects are direct or indirect.

Direct Effects

Similar to GAAP, IFRS indicates that companies should retrospectively apply the **direct effects of a change in accounting policy**. An example of a **direct effect** is an adjustment to an inventory balance as a result of a change in the inventory valuation method. For example, referring to Lancer Company on pages 1276–1278, Lancer should change the inventory amounts in prior periods to indicate the change to the FIFO method of inventory valuation. Another inventory-related example would be an impairment adjustment resulting from applying the lower-of-cost-or-net realizable value test to the adjusted inventory balance. Related changes, such as deferred income tax effects of the impairment adjustment, are also considered direct effects. This entry was illustrated in the Denson example on page 1271, in which the change to percentage-of-completion accounting resulted in recording a deferred tax liability.

Indirect Effects

In addition to direct effects, companies can have **indirect effects related to a change in accounting policy**. An **indirect effect** is any change to current or future cash flows of a company that results from making a change in accounting policy that is applied retrospectively. An example of an indirect effect is a change in profit-sharing or royalty payment that is based on a reported amount such as revenue or net income. The IASB is silent on what to do in this situation. GAAP (likely because its standard in this area was issued after *IAS 8*) requires that indirect effects do not change prior period amounts.

For example, let's assume that Lancer Company has an employee profit-sharing plan based on net income and it changed from the weighted-average inventory method to FIFO in 2017. Lancer reports higher income in 2016 and 2017 if it used the FIFO method. In addition, let's assume that the profit-sharing plan requires that Lancer pay the incremental amount due based on the FIFO income amounts. In this situation, Lancer reports this additional expense **in the current period**; it would not change prior periods for this expense. If the company prepares comparative financial statements, it follows that it does not recast the prior periods for this additional expense. If the terms of the profit-sharing plan indicate that *no payment is necessary* in the current period due to this change, then the company need not recognize additional profit-sharing expense in the current period. Neither does it change amounts reported for prior periods.

When a company recognizes the indirect effects of a change in accounting policy, it includes in the financial statements a description of the indirect effects. In doing so, it discloses the amounts recognized in the current period and related per share information.

Impracticability

It is not always possible for companies to determine how they would have reported prior periods' financial information under retrospective application of an accounting policy change. Retrospective application is considered **impracticable** if a company cannot determine the prior period effects using every reasonable effort to do so.

Companies should not use retrospective application if one of the following conditions exists:

1. The company cannot determine the effects of the retrospective application.
2. Retrospective application requires assumptions about management's intent in a prior period.
3. Retrospective application requires significant estimates for a prior period, and the company cannot objectively verify the necessary information to develop these estimates.

If any of the above conditions exists, it is deemed impracticable to apply the retrospective approach. In this case, the company prospectively applies the new accounting policy as of the earliest date it is practicable to do so.

For example, assume that Williams Company changed its accounting policy for depreciable assets so as to more fully apply component depreciation under revaluation accounting. Unfortunately, the company does not have detailed accounting records to establish a basis for the components of these assets. As a result, Williams determines it is not practicable to account for the change to full component depreciation using the retrospective application approach. It therefore applies the policy prospectively, starting at the beginning of the current year.

Williams must disclose only the effect of the change on the results of operations in the period of change. Also, the company should explain the reasons for omitting the computations of the cumulative effect for prior years. Finally, it should disclose the justification for the change to component depreciation.

ON THE HORIZON

For the most part, IFRS and GAAP are similar in the area of accounting changes and reporting the effects of errors. Thus, there is no active project in this area. A related development involves the presentation of comparative data. Under IFRS, when a company prepares financial statements on a new basis, two years of comparative data are reported. GAAP requires comparative information for a three-year period. Use of the shorter comparative data period must be addressed before U.S. companies can adopt IFRS.

IFRS SELF-TEST QUESTIONS

- Which of the following is **false**?
 - GAAP and IFRS have the same absolute standard regarding the reporting of error corrections in previously issued financial statements.
 - The accounting for changes in estimates is similar between GAAP and IFRS.
 - Under IFRS, the impracticability exception applies both to changes in accounting principles and to the correction of errors.
 - GAAP has detailed guidance on the accounting and reporting of indirect effects; IFRS does not.
- Which of the following is **not** classified as an accounting change by IFRS?
 - Change in accounting policy.
 - Change in accounting estimate.
 - Errors in financial statements.
 - None of the above.
- IFRS requires companies to use which method for reporting changes in accounting policies?
 - Cumulative effect approach.
 - Retrospective approach.
 - Prospective approach.
 - Averaging approach.
- Under IFRS, the retrospective approach should **not** be used if:
 - retrospective application requires assumptions about management's intent in a prior period.
 - the company does not have trained staff to perform the analysis.
 - the effects of the change have counterbalanced.
 - the effects of the change have not counterbalanced.
- Which of the following is **true** regarding whether IFRS specifically addresses the accounting and reporting for effects of changes in accounting policies?

	<u>Direct effects</u>	<u>Indirect effects</u>
(a)	Yes	Yes
(b)	No	No
(c)	No	Yes
(d)	Yes	No

IFRS CONCEPTS AND APPLICATION

- IFRS22-1** Where can authoritative IFRS related to accounting changes be found?
- IFRS22-2** Briefly describe some of the similarities and differences between GAAP and IFRS with respect to reporting accounting changes.
- IFRS22-3** How might differences in presentation of comparative data under GAAP and IFRS affect adoption of IFRS by U.S. companies?
- IFRS22-4** What is the indirect effect of a change in accounting policy? Briefly describe the approach to reporting the indirect effects of a change in accounting policy under IFRS.
- IFRS22-5** Discuss how a change in accounting policy is handled when it is impracticable to determine previous amounts.
- IFRS22-6** Joblonsky Inc. has recently hired a new independent auditor, Karen Ogleby, who says she wants "to get everything straightened out." Consequently, she has proposed the following accounting changes in connection with Joblonsky Inc.'s 2017 financial statements.

- At December 31, 2016, the client had a receivable of \$820,000 from Hendricks Inc. on its statement of financial position. Hendricks Inc. has gone bankrupt, and no recovery is expected. The client proposes to write off the receivable as a prior period item.

2. The client proposes the following changes in depreciation policies.
 - (a) For office furniture and fixtures, it proposes to change from a 10-year useful life to an 8-year life. If this change had been made in prior years, retained earnings at December 31, 2016, would have been \$250,000 less. The effect of the change on 2017 income alone is a reduction of \$60,000.
 - (b) For its new equipment in the leasing division, the client proposes to adopt the sum-of-the-years'-digits depreciation method. The client had never used SYD before. The first year the client operated a leasing division was 2017. If straight-line depreciation were used, 2017 income would be \$110,000 greater.
3. In preparing its 2016 statements, one of the client's bookkeepers overstated ending inventory by \$235,000 because of a mathematical error. The client proposes to treat this item as a prior period adjustment.
4. In the past, the client has spread preproduction costs in its furniture division over 5 years. Because its latest furniture is of the "fad" type, it appears that the largest volume of sales will occur during the first 2 years after introduction. Consequently, the client proposes to amortize preproduction costs on a per-unit basis, which will result in expensing most of such costs during the first 2 years after the furniture's introduction. If the new accounting method had been used prior to 2017, retained earnings at December 31, 2016, would have been \$375,000 less.
5. For the nursery division, the client proposes to switch from FIFO to average-cost inventories because it believes that average-cost will provide a better income measure. The effect of making this change on 2017 earnings will be an increase of \$320,000. The client says that the effect of the change on December 31, 2016, retained earnings cannot be determined.
6. To achieve an appropriate recognition of revenues and expenses in its building construction division, the client proposes to switch from the cost-recovery method of accounting to the percentage-of-completion method. Had the percentage-of-completion method been employed in all prior years, retained earnings at December 31, 2016, would have been \$1,075,000 greater.

Instructions

- (a) For each of the changes described above, decide whether:
 - (1) The change involves an accounting policy, accounting estimate, or correction of an error.
 - (2) Restatement of opening retained earnings is required.
- (b) What would be the proper adjustment to the December 31, 2016, retained earnings?

Professional Research

IFRS22-7 As part of the year-end accounting process and review of operating policies, Cullen Co. is considering a change in the accounting for its equipment from the straight-line method to an accelerated method. Your supervisor wonders how the company will report this change in accounting. It has been a few years since he took intermediate accounting, and he cannot remember whether this change would be treated in a retrospective or prospective manner. Your supervisor wants you to research the authoritative guidance on a change in accounting policy related to depreciation methods.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) What are the accounting and reporting guidelines for a change in accounting policy related to depreciation methods?
- (b) What are the conditions that justify a change in depreciation method, as contemplated by Cullen Co.?

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS22-8 The financial statements of M&S are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) Were there changes in accounting policies reported by M&S during the two years covered by its income statements (2014–2015)? If so, describe the nature of the change and the year of change.
- (b) What types of estimates did M&S discuss in 2015?

Statement of Cash Flows

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1** Describe the usefulness and format of the statement of cash flows.
- 2** Prepare a statement of cash flows.
- 3** Contrast the direct and indirect methods of calculating net cash flow from operating activities.
- 4** Discuss special problems in preparing a statement of cash flows.
- 5** Explain the use of a worksheet in preparing a statement of cash flows.

SHOW ME THE MONEY!

Investors usually look to net income as a key indicator of a company's financial health and future prospects. The following graph shows the net income of one company over a seven-year period.

The company showed a pattern of consistent profitability and even some periods of income growth. Between years 1 and 4, net income for this company grew by 32 percent, from \$31 million to \$41 million. Would you expect its profitability to continue? The company had consistently paid dividends and interest. Would you expect it to continue to do so? Investors answered these questions by buying the company's stock. Eighteen months later, this company—**W. T. Grant**—filed for bankruptcy, in what was then the largest bankruptcy filing in the United States.

How could this happen? As indicated by the second line in the graph, the company had experienced several years of negative cash flow from its operations, even though it reported profits. How can a company have negative cash flows while reporting profits? The answer lays partly in the fact that W. T. Grant was having trouble collecting the receivables from its credit sales, causing cash flow to be less than net income. Investors who analyzed the cash flows would have been likely to find an early warning signal of W. T. Grant's operating problems.

Investors can also look to cash flow information to sniff out companies that can be good buys. As one analyst stated when it comes to valuing stocks: “Show me the money!” Here’s the thinking behind that statement. Start with the “cash flows from operations” reported in the statement of cash flows, which (as you will learn in this chapter) consists of net income with noncash charges (like depreciation and deferred taxes) added back and cash-draining events (like an inventory pile-up) taken out. Now subtract capital expenditures and dividends. What you’re left with is free cash flow (as discussed in Chapter 5).

Many analysts like companies trading at low multiples of their free cash flow—low, that is, in relation to rivals today or the same company in past years. Why? They know that reported earnings can be misleading. Case in point: Computer-game firm **Activision Blizzard** reported net income of \$113 million in a recent year. But it did better than that. It took in an additional \$300 million, mostly for subscriptions to online multiplayer games. It gets the cash now but records the revenue only over time, as the subscriptions run out. A couple of investment houses put this stock on their buy list on the strength of its cash flows.

In contrast, **Boeing** experienced a 3 percent decline in its stock price in a recent quarter when it reported decent operating profits but declining free cash flow (mostly due to share buybacks and increased capital expenditures). Analysts said the cash outflow spurred investors to sell.

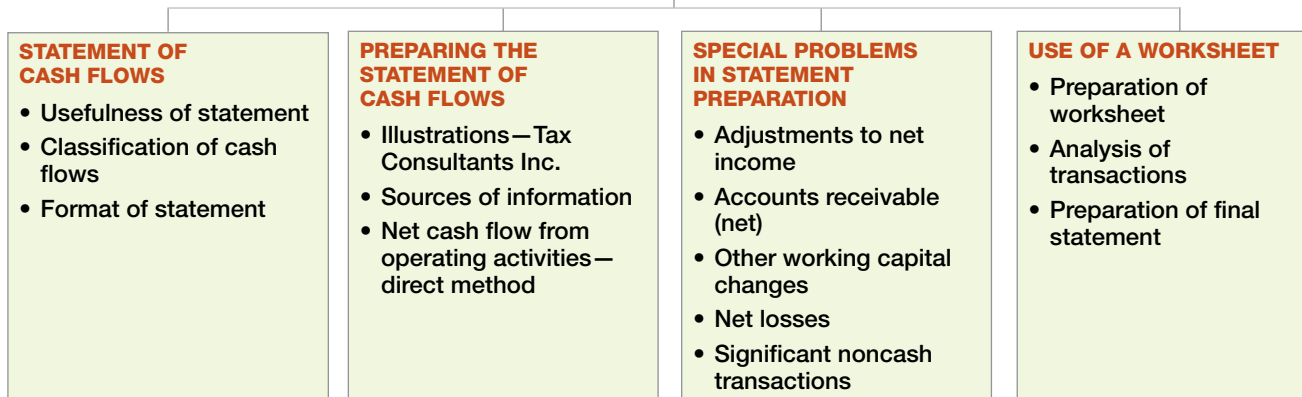

So watch cash flow—to get an indicator of companies headed for trouble, as well as companies that may be undervalued.

Sources: Adapted from James A. Largay III and Clyde P. Stickney, “Cash Flows, Ratio Analysis, and the W. T. Grant Company Bankruptcy,” *Financial Analysts Journal* (July–August 1980), p. 51; D. Fisher, “Cash Doesn’t Lie,” *Forbes* (April 12, 2010), pp. 52–55; and J. Benkoe, “Show Me the Money,” *The New York Times* (April 22, 2015).

PREVIEW OF CHAPTER 23 As the opening story indicates, examination of **W. T. Grant’s** cash flows from operations would have shown the financial inflexibility that eventually caused the company’s bankruptcy. This chapter explains the main components of a statement of cash flows and the types of information it provides. The content and organization of the chapter are as follows.

This chapter also includes numerous **conceptual and international discussions** that are integral to the topics presented here.

STATEMENT OF CASH FLOWS

REVIEW AND PRACTICE

Go to the REVIEW AND PRACTICE section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

LEARNING OBJECTIVE 1

Describe the usefulness and format of the statement of cash flows.

See the **FASB Codification Reference** (page 1395).

UNDERLYING CONCEPTS

Reporting information in the statement of cash flows contributes to meeting the objective of financial reporting.

STATEMENT OF CASH FLOWS

The primary purpose of the **statement of cash flows** is to provide information about a company's cash receipts and cash payments during a period. A secondary objective is to provide cash-basis information about the company's operating, investing, and financing activities. The statement of cash flows therefore reports cash receipts, cash payments, and net change in cash resulting from a company's operating, investing, and financing activities during a period. Its format reconciles the beginning and ending cash balances for the period.

Usefulness of the Statement of Cash Flows

The statement of cash flows provides information to help investors, creditors, and others assess the following **[1]**:

- 1. The entity's ability to generate future cash flows.** A primary objective of financial reporting is to provide information with which to predict the amounts, timing, and uncertainty of future cash flows. By examining relationships between items such as sales and net cash flow from operating activities, or net cash flow from operating activities and increases or decreases in cash, it is possible to better predict the future cash flows than is possible using accrual-basis data alone.
- 2. The entity's ability to pay dividends and meet obligations.** Simply put, cash is essential. Without adequate cash, a company cannot pay employees, settle debts, pay out dividends, or acquire equipment. A statement of cash flows indicates where the company's cash comes from and how the company uses its cash. Employees, creditors, stockholders, and customers should be particularly interested in this statement, because it alone shows the flows of cash in a business.
- 3. The reasons for the difference between net income and net cash flow from operating activities.** The net income number is important: It provides information on the performance of a company from one period to another. But some people are critical of accrual-basis net income because companies must make estimates to arrive at it. Such is not the case with cash. Thus, as the opening story showed, financial statement readers can benefit from knowing why a company's net income and net cash flow from operating activities differ, and can assess for themselves the reliability of the income number.
- 4. The cash and noncash investing and financing transactions during the period.** Besides operating activities, companies undertake investing and financing transactions. *Investing* activities include the purchase and sale of assets other than a company's products or services. *Financing* activities include borrowings and repayments of borrowings, investments by owners, and distributions to owners. By examining a company's investing and financing activities, a financial statement reader can better understand why assets and liabilities increased or decreased during the period. For example, by reading the statement of cash flows, the reader might find answers to the following questions:
 - Why did cash decrease for **Home Depot** when it reported net income for the period?
 - How much did **Southwest Airlines** spend on property, plant, and equipment last year?
 - Did dividends paid by **Campbell's Soup** increase?
 - How much money did **Coca-Cola** borrow last year?
 - How much cash did **Hewlett-Packard** use to repurchase its common stock?

Classification of Cash Flows

The statement of cash flows classifies cash receipts and cash payments by operating, investing, and financing activities.¹ Transactions and other events characteristic of each kind of activity are as follows.

- 1. Operating activities** involve the cash effects of transactions that enter into the determination of net income, such as cash receipts from sales of goods and services, and cash payments to suppliers and employees for acquisitions of inventory and expenses.
- 2. Investing activities** generally involve long-term assets and include (a) making and collecting loans, and (b) acquiring and disposing of investments and productive long-lived assets.
- 3. Financing activities** involve liability and stockholders' equity items and include (a) obtaining cash from creditors and repaying the amounts borrowed, and (b) obtaining capital from owners and providing them with a return on, and a return of, their investment.

Illustration 23-1 classifies the typical cash receipts and payments of a company according to operating, investing, and financing activities. The operating activities category is the most important. It shows the cash provided by company operations. This source of cash is generally considered to be the best measure of a company's ability to generate enough cash to continue as a going concern.

<p>Operating</p> <p>Cash inflows</p> <ul style="list-style-type: none"> From sales of goods or services. From returns on loans (interest) and on equity securities (dividends). <p>Cash outflows</p> <ul style="list-style-type: none"> To suppliers for inventory. To employees for services. To redeem long-term debt or reacquire capital stock. 		<p>Generally Long-Term Liability and Equity Items</p>

ILLUSTRATION 23-1

Classification of Typical Cash Inflows and Outflows

INTERNATIONAL PERSPECTIVE

According to IFRS, companies can define "cash and cash equivalents" as "net monetary assets" — that is, as "cash and demand deposits and highly liquid investments less short-term borrowings."

¹The basis recommended by the FASB for the statement of cash flows is actually "cash and cash equivalents." **Cash equivalents** are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in interest rates. Generally, only investments with original maturities of three months or less qualify under this definition. Examples of cash equivalents are Treasury bills, commercial paper, and money market funds purchased with cash that is in excess of immediate needs.

Although we use the term "cash" throughout our discussion and illustrations, we mean cash and cash equivalents when reporting the cash flows and the net increase or decrease in cash.

Note the following general guidelines about the classification of cash flows.

1. Operating activities involve income statement items.
2. Investing activities involve cash flows resulting from changes in investments and long-term asset items.
3. Financing activities involve cash flows resulting from changes in long-term liability and stockholders' equity items.

Companies classify some cash flows relating to investing or financing activities as operating activities.² For example, companies classify receipts of investment income (interest and dividends) and payments of interest to lenders as operating activities. Why are these considered operating activities? Companies report these items in the income statement, where the results of operations are shown.

Conversely, companies classify some cash flows relating to operating activities as investing or financing activities. For example, a company classifies the cash received from the sale of property, plant, and equipment as an investing activity, while it excludes the effects of any related gain or loss in net cash flow from operating activities. Likewise, a gain or loss on the payment (extinguishment) of debt is generally part of the cash outflow related to the repayment of the amount borrowed. It therefore is a financing activity.

WHAT DO THE NUMBERS MEAN?

To evaluate overall cash flow, it is useful to understand where in the product life cycle a company is. Generally, companies move through several stages of development, which have implications

HOW'S MY CASH FLOW?

for cash flow. As the following graph shows, the pattern of cash flows from operating, financing, and investing activities will vary depending on the stage of the product life cycle.

In the introductory phase, the product is likely not generating much revenue (operating cash flow is negative). Because the company is making heavy investments to get a product off the ground, cash flow from investment is negative, and financing cash flows are positive.

As the product moves to the growth and maturity phases, these cash flow relationships reverse. The product generates more cash flow from operations, which can be used to cover investments needed to support the product, and less cash is needed from financing. So is a negative operating cash flow bad? Not always. It depends on the product life cycle.

Source: Adapted from Paul D. Kimmel, Jerry J. Weygandt, and Donald E. Kieso, *Financial Accounting: Tools for Business Decision Making*, 8th ed. (New York: John Wiley & Sons, 2016), p. 607.

²Banks and brokers must classify cash flows from purchases and sales of loans and securities specifically for resale and carried at fair value as **operating activities**. This requirement recognizes that for these firms these assets are similar to inventory in other businesses. [2]

Format of the Statement of Cash Flows

The three activities we discussed above constitute the general format of the statement of cash flows. The operating activities section always appears first. It is followed by the investing activities section and then the financing activities section.

A company reports the individual inflows and outflows from investing and financing activities separately. That is, a company reports them gross, not netted against one another. Thus, a cash outflow from the purchase of property is reported separately from the cash inflow from the sale of property. Similarly, a cash inflow from the issuance of debt is reported separately from the cash outflow from its retirement.

The net increase or decrease in cash reported during the period should reconcile the beginning and ending cash balances as reported in the comparative balance sheets. The general format of the statement of cash flows presents the results of the three activities discussed previously—operating, investing, and financing. Illustration 23-2 shows a widely used form of the statement of cash flows.

ILLUSTRATION 23-2

Format of the Statement of Cash Flows

INTERNATIONAL PERSPECTIVE

Both IFRS and GAAP specify that companies must classify cash flows as operating, investing, or financing.

PREPARING THE STATEMENT OF CASH FLOWS

Companies prepare the statement of cash flows differently from the three other basic financial statements. For one thing, it is not prepared from an adjusted trial balance. The statement of cash flows requires detailed information concerning the changes in account balances that occurred between two points in time. An adjusted trial balance will not provide the necessary data. Second, the statement of cash flows deals with cash receipts and payments. As a result, the company must adjust the effects of the use of accrual accounting to determine cash flows. The information to prepare this statement usually comes from three sources:

- 1. Comparative balance sheets** provide the amount of the changes in assets, liabilities, and equities from the beginning to the end of the period.
- 2. Current income statement data** help determine the amount of cash provided by or used by operations during the period.
- 3. Selected transaction data** from the general ledger provide additional detailed information needed to determine how the company provided or used cash during the period.

LEARNING OBJECTIVE 2

Prepare a statement of cash flows.

Preparing the statement of cash flows from the data sources above involves three major steps:

Step 1. Determine the change in cash. This procedure is straightforward. A company can easily compute the difference between the beginning and the ending cash balance from examining its comparative balance sheets.

Step 2. Determine the net cash flow from operating activities. This procedure is complex. It involves analyzing not only the current year's income statement but also comparative balance sheets as well as selected transaction data.

Step 3. Determine net cash flows from investing and financing activities. A company must analyze all other changes in the balance sheet accounts to determine their effects on cash.

On the following pages, we work through these three steps in the process of preparing the statement of cash flows for Tax Consultants Inc. over several years.

Illustrations—Tax Consultants Inc.

We show the steps in preparing the statement of cash flows using data for Tax Consultants Inc. To begin, we use the **first year of operations** for Tax Consultants Inc. The company started on January 1, 2016, when it issued 60,000 shares of \$1 par value common stock for \$60,000 cash. The company rented its office space, furniture, and equipment, and performed tax consulting services throughout the first year. The comparative balance sheets at the beginning and end of the year 2016 appear in Illustration 23-3.

ILLUSTRATION 23-3

Retained earnings	20,000	—	20,000 Increase
Total	<u>\$85,000</u>	<u>\$—</u>	

Illustration 23-4 shows the income statement and additional information for Tax Consultants.

ILLUSTRATION 23-4

Income Statement, Tax Consultants Inc., Year 1

TAX CONSULTANTS INC.	
INCOME STATEMENT	
FOR THE YEAR ENDED DECEMBER 31, 2016	
Revenues	\$125,000
Operating expenses	<u>85,000</u>
Income before income taxes	40,000
Income tax expense	<u>6,000</u>
Net income	<u>\$ 34,000</u>
Additional Information	
Examination of selected data indicates that a dividend of \$14,000 was declared and paid during the year.	

Step 1: Determine the Change in Cash

To prepare a statement of cash flows, the first step is to **determine the change in cash**. This is a simple computation. Tax Consultants had no cash on hand at the beginning of the year 2016. It had \$49,000 on hand at the end of 2016. Thus, cash changed (increased) in 2016 by \$49,000.

Step 2: Determine Net Cash Flow from Operating Activities

To determine net cash flow from operating activities,³ companies adjust net income in numerous ways. A useful starting point is to understand why net income must be converted to net cash provided by operating activities.

Under generally accepted accounting principles, most companies use the accrual basis of accounting. As you have learned, this basis requires that companies record revenue when a performance obligation is met and record expenses when incurred. For example, revenues may include credit sales for which the company has not yet collected cash, or expenses incurred may include some items that the company has not yet paid in cash. Thus, under the accrual basis of accounting, net income is not the same as net cash flow from operating activities.

To arrive at net cash flow from operating activities, a company must determine revenues and expenses on a **cash basis**. **It does this by eliminating the effects of income statement transactions that do not result in an increase or decrease in cash.** Illustration 23-5 shows the relationship between net income and net cash flow from operating activities.

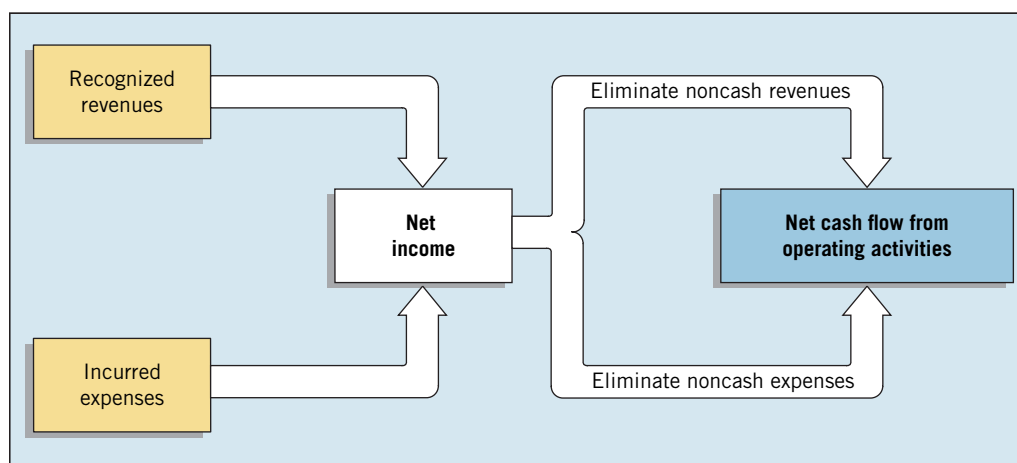

ILLUSTRATION 23-5

Net Income versus
Net Cash Flow from
Operating Activities

In this chapter, we use the term net income to refer to accrual-based net income. A company may convert net income to net cash flow from operating activities through either a direct method or an indirect method. Due to its widespread use in practice, in the following sections we illustrate use of the indirect method. Later in the chapter, we describe the direct method and discuss the advantages and disadvantages of the two methods.⁴

The **indirect method** (or **reconciliation method**) starts with net income and converts it to net cash flow from operating activities. In other words, **the indirect method adjusts net income for items that affected reported net income but did not affect cash.**

³“Net cash flow from operating activities” is a generic phrase, replaced in the statement of cash flows with either “Net cash **provided by** operating activities” if operations increase cash, or “Net cash **used by** operating activities” if operations decrease cash.

⁴*Accounting Trends and Techniques* indicates that out of its 500 surveyed companies, 495 (99 percent) used the indirect method, and only 5 used the direct method. *In doing homework assignments, you should follow instructions for use of either the direct or indirect method.*

To compute net cash flow from operating activities, a company adds back noncash charges in the income statement to net income and deducts noncash credits. We explain the two adjustments to net income for Tax Consultants, namely, the increases in accounts receivable and accounts payable, as follows.

Increase in Accounts Receivable—Indirect Method. Tax Consultants' accounts receivable increased by \$36,000 (from \$0 to \$36,000) during the year. For Tax Consultants, this means that cash receipts were \$36,000 lower than revenues. The Accounts Receivable account in Illustration 23-6 shows that Tax Consultants had \$125,000 in revenues (as reported on the income statement), but it collected only \$89,000 in cash.

ILLUSTRATION 23-6

Analysis of Accounts Receivable

		Accounts Receivable	
1/1/16	Balance	-0-	
	Revenues	125,000	Receipts from customer 89,000
12/31/16	Balance	36,000	

As shown in Illustration 23-7, to adjust net income to net cash provided by operating activities, Tax Consultants must deduct the increase of \$36,000 in accounts receivable from net income. When the Accounts Receivable balance *decreases*, cash receipts are higher than revenue recognized under the accrual basis. Therefore, the company adds to net income the amount of the decrease in accounts receivable to arrive at net cash provided by operating activities.

Increase in Accounts Payable—Indirect Method. When accounts payable increase during the year, expenses on an accrual basis exceed those on a cash basis. Why? Because Tax Consultants incurred expenses, but some of the expenses are not yet paid. To convert net income to net cash flow from operating activities, Tax Consultants must add back the increase of \$5,000 in accounts payable to net income.

As a result of the accounts receivable and accounts payable adjustments, Tax Consultants determines net cash provided by operating activities is \$3,000 for the year 2016. Illustration 23-7 shows this computation.

ILLUSTRATION 23-7

Computation of Net Cash Flow from Operating Activities, Year 1—Indirect Method

Net income		\$ 34,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(36,000)	
Increase in accounts payable	5,000	(31,000)
Net cash provided by operating activities		\$ 3,000

WHAT DO THE NUMBERS MEAN?

Investors must be vigilant in their monitoring of management incentives to manipulate both earnings and cash flows. That is, financial success is dependent not only on a company's ability to generate revenues and earnings, but also cash flow. A company that shows profits but is unable to generate cash will also experience waning investor enthusiasm.

Thus, management has an incentive to make operating cash flow look good because Wall Street has paid a premium for companies that generate a lot of cash from operations, rather than through borrowings. However, similar to earnings, companies have ways to pump up cash flow from operations.

EARNINGS AND CASH FLOW MANAGEMENT?

One way that companies can boost their operating cash flow is by "securitizing" receivables. That is, companies can speed up cash collections by selling their receivables. For example, **Federated Department Stores** reported a \$2.2 billion increase in cash flow from operations. This seems impressive until you read the fine print, which indicates that a big part of the increase was due to the sale of receivables. As discussed in this section, decreases in accounts receivable increase cash flow from operations. So while it appeared that Federated's core operations had improved, the company really did little more than accelerate collections of its receivables. In fact, the

cash flow from the securitizations represented more than half of Federated's operating cash flow.

Similarly, companies may time the recognition of noncash gains to mask cash flow problems. Take the example of **Chesapeake Energy Corp.** In a recent quarter, Chesapeake, the second-largest U.S. gas producer, reported a \$929 million net profit, nearly double from a year earlier. These results seem

pretty good until you take a closer look. Falling commodity prices for natural gas resulted in a 45 percent decrease in Chesapeake's operating cash flow. To plug the hole in its bottom line, the company sold pipeline assets. As a result, all but \$3 million of its net income came from these sales and other noncash gains. Thus, in evaluating the quality of accounting, investors must keep an eye on the quality of earnings and cash flows.

Source: Adapted from Ann Tergesen, "Cash Flow Hocus Pocus," *BusinessWeek* (July 16, 2002), pp. 130–131. See also C. Mulford and A. Lopez de Mesa, *Cash Flow Trends and Their Fundamental Drivers: Comprehensive Industry Review*, Georgia Tech Financial Analysis Lab (October 2, 2012); and D. Gilbert, "Chesapeake Plans Increase in Asset Sales as Net Rises," *Wall Street Journal* (August 6, 2012).

Step 3: Determine Net Cash Flows from Investing and Financing Activities

After Tax Consultants has computed the net cash provided by operating activities, the next step is to determine whether any other changes in balance sheet accounts caused an increase or decrease in cash.

For example, an examination of the remaining balance sheet accounts for Tax Consultants shows increases in both common stock and retained earnings. The common stock increase of \$60,000 resulted from the issuance of common stock for cash. The issuance of common stock is reported in the statement of cash flows as a receipt of cash from a financing activity.

Two items caused the retained earnings increase of \$20,000:

1. Net income of \$34,000 increased retained earnings.
2. Declaration of \$14,000 of dividends decreased retained earnings.

Tax Consultants has converted net income into net cash flow from operating activities, as explained earlier. The additional data indicate that it paid the dividend. Thus, the company reports the dividend payment as a cash outflow, classified as a financing activity.

Statement of Cash Flows—2016

We are now ready to prepare the statement of cash flows. The statement starts with the operating activities section. Tax Consultants uses the indirect method to report net cash flow from operating activities.

Illustration 23-8 shows the statement of cash flows for Tax Consultants Inc., for year 1 (2016).

TAX CONSULTANTS INC.		
STATEMENT OF CASH FLOWS		
FOR THE YEAR ENDED DECEMBER 31, 2016		
Cash flows from operating activities		
Net income		\$ 34,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(36,000)	
Increase in accounts payable	5,000	(31,000)
Net cash provided by operating activities		3,000
Cash flows from financing activities		
Issuance of common stock	60,000	
Payment of cash dividends	(14,000)	
Net cash provided by financing activities		46,000
Net increase in cash		49,000
Cash, January 1, 2016		—
Cash, December 31, 2016		<u>\$ 49,000</u>

ILLUSTRATION 23-8
Statement of Cash Flows,
Tax Consultants Inc.,
Year 1

As indicated, the \$60,000 increase in common stock results in a financing activity cash inflow. The payment of \$14,000 in cash dividends is a financing activity outflow of cash. The \$49,000 increase in cash reported in the statement of cash flows agrees with the increase of \$49,000 shown in the comparative balance sheets as the change in the Cash account.

Illustration—2017

Tax Consultants Inc. continued to grow and prosper in its second year of operations. The company purchased land, building, and equipment, and revenues and net income increased substantially over the first year. Illustrations 23-9 and 23-10 present information related to the second year of operations for Tax Consultants Inc.

Income Statement, Tax Consultants Inc., Year 2

TAX CONSULTANTS INC.		
INCOME STATEMENT		
FOR THE YEAR ENDED DECEMBER 31, 2017		
Revenues		\$492,000
Operating expenses (excluding depreciation)	\$269,000	
Depreciation expense	21,000	290,000
Income from operations		202,000
Income tax expense		68,000
Net income		<u>\$134,000</u>
Additional Information		
(a) The company declared and paid an \$18,000 cash dividend.		
(b) The company obtained \$150,000 cash through the issuance of long-term bonds.		
(c) Land, building, and equipment were acquired for cash.		

Step 1: Determine the Change in Cash. To prepare a statement of cash flows from the available information, the first step is to determine the change in cash. As indicated from the information presented, cash decreased \$12,000 (\$49,000 – \$37,000).

Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method. Using the indirect method, we adjust net income of \$134,000 on an accrual basis to arrive at

net cash flow from operating activities. Explanations for the adjustments to net income follow.

- **Decrease in Accounts Receivable.** Accounts receivable decreased during the period because cash receipts (cash-basis revenues) are higher than revenues reported on an accrual basis. To convert net income to net cash flow from operating activities, the decrease of \$10,000 in accounts receivable must be added to net income.
- **Increase in Prepaid Expenses.** When prepaid expenses (assets) increase during a period, expenses on an accrual-basis income statement are lower than they are on a cash-basis income statement. The reason: Tax Consultants has made cash payments in the current period, but expenses (as charges to the income statement) have been deferred to future periods. To convert net income to net cash flow from operating activities, the company must deduct from net income the increase of \$6,000 in prepaid expenses. An increase in prepaid expenses results in a decrease in cash during the period.
- **Increase in Accounts Payable.** Like the increase in 2016, Tax Consultants must add the 2017 increase of \$35,000 in accounts payable to net income, to convert to net cash flow from operating activities. The company incurred a greater amount of expense than the amount of cash it disbursed.
- **Depreciation Expense (Increase in Accumulated Depreciation).** The purchase of depreciable assets is a use of cash, shown in the investing section in the year of acquisition. Tax Consultants' depreciation expense of \$21,000 (also represented by the increase in accumulated depreciation) is a noncash charge; the company adds it back to net income, to arrive at net cash flow from operating activities. The \$21,000 is the sum of the \$11,000 depreciation on the building plus the \$10,000 depreciation on the equipment.

Certain other periodic charges to expense do not require the use of cash. Examples are the amortization of intangible assets and depletion expense. Such charges are treated in the same manner as depreciation. Companies frequently list depreciation and similar noncash charges as the first adjustments to net income in the statement of cash flows.

As a result of the foregoing items, net cash provided by operating activities is \$194,000 as shown in Illustration 23-11.

Net income		\$134,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$21,000	
Decrease in accounts receivable	10,000	
Increase in prepaid expenses	(6,000)	
Increase in accounts payable	35,000	60,000
Net cash provided by operating activities		\$194,000

ILLUSTRATION 23-11
Computation of Net Cash Flow from Operating Activities, Year 2—Indirect Method

Step 3: Determine Net Cash Flows from Investing and Financing Activities. After you have determined the items affecting net cash provided by operating activities, the next step involves analyzing the remaining changes in balance sheet accounts. Tax Consultants Inc. analyzed the following accounts.

- **Increase in Land.** As indicated from the change in the Land account, the company purchased land of \$70,000 during the period. This transaction is an investing activity, reported as a use of cash.
- **Increase in Buildings and Related Accumulated Depreciation.** As indicated in the additional data and from the change in the Buildings account, Tax Consultants acquired an office building using \$200,000 cash. This transaction is a cash outflow, reported in the investing section. The \$11,000 increase in accumulated depreciation

results from recording depreciation expense on the building. As indicated earlier, the reported depreciation expense has no effect on the amount of cash.

- **Increase in Equipment and Related Accumulated Depreciation.** An increase in equipment of \$68,000 resulted because the company used cash to purchase equipment. This transaction is an outflow of cash from an investing activity. The depreciation expense entry for the period explains the increase in Accumulated Depreciation—Equipment.
- **Increase in Bonds Payable.** The Bonds Payable account increased \$150,000. Cash received from the issuance of these bonds represents an inflow of cash from a financing activity.
- **Increase in Retained Earnings.** Retained earnings increased \$116,000 during the year. Two factors explain this increase. (1) Net income of \$134,000 increased retained earnings, and (2) dividends of \$18,000 decreased retained earnings. As indicated earlier, the company adjusts net income to net cash provided by operating activities in the operating activities section. Payment of the dividends is a financing activity that involves a cash outflow.

Statement of Cash Flows—2017. Combining the foregoing items, we get a statement of cash flows for 2017 for Tax Consultants Inc., using the indirect method to compute net cash flow from operating activities.

ILLUSTRATION 23-12

Illustration—2018

Our third example, covering the 2018 operations of Tax Consultants Inc., is more complex. It again uses the indirect method to compute and present net cash flow from operating activities.

Tax Consultants Inc. experienced continued success in 2018 and expanded its operations to include the sale of computer software used in tax-return preparation and tax planning. Thus, inventory is a new asset appearing in the company's December 31, 2018, balance sheet. Illustrations 23-13 and 23-14 show the comparative balance sheets, income statements, and selected data for 2018.

Additional Information		
(a) Operating expenses include depreciation expense of \$33,000 and expiration of prepaid expenses of \$2,000.		
(b) Land was sold at its book value for cash.		
(c) Cash dividends of \$55,000 were declared and paid.		
(d) Interest expense of \$12,000 was paid in cash.		
(e) Equipment with a cost of \$166,000 was purchased for cash. Equipment with a cost of \$41,000 and a book value of \$36,000 was sold for \$34,000 cash.		
(f) Bonds were redeemed at their book value for cash.		
(g) Common stock (\$1 par) was issued for cash.		

ILLUSTRATION 23-14

Income Statement, Tax Consultants Inc., Year 3

Step 1: Determine the Change in Cash. The first step in the preparation of the statement of cash flows is to determine the change in cash. As the comparative balance sheets show, cash increased \$17,000 in 2018.

Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method. We explain the adjustments to net income of \$125,000 as follows.

- **Increase in Accounts Receivable.** The increase in accounts receivable of \$42,000 represents recorded accrual-basis revenues in excess of cash collections in 2018. The company deducts this increase from net income to convert from the accrual basis to the cash basis.

- **Increase in Inventory.** The \$54,000 increase in inventory represents an operating use of cash, not an expense. Tax Consultants therefore deducts this amount from net income, to arrive at net cash flow from operations. In other words, when inventory purchased exceeds inventory sold during a period, cost of goods sold on an accrual basis is lower than on a cash basis.
- **Decrease in Prepaid Expenses.** The \$2,000 decrease in prepaid expenses represents a charge to the income statement for which Tax Consultants made no cash payment in the current period. The company adds back the decrease to net income, to arrive at net cash flow from operating activities.
- **Decrease in Accounts Payable.** When accounts payable decrease during the year, cost of goods sold and expenses on a cash basis are higher than they are on an accrual basis. To convert net income to net cash flow from operating activities, the company must deduct the \$7,000 decrease in accounts payable from net income.
- **Depreciation Expense (Increase in Accumulated Depreciation).** Accumulated Depreciation—Buildings increased \$10,000 (\$21,000 – \$11,000). The Buildings account did not change during the period, which means that Tax Consultants recorded depreciation expense of \$10,000 in 2018.

Accumulated Depreciation—Equipment increased by \$18,000 (\$28,000 – \$10,000) during the year. But Accumulated Depreciation—Equipment decreased by \$5,000 as a result of the sale during the year. Thus, depreciation for the year was \$23,000. The company reconciled Accumulated Depreciation—Equipment as follows.

Beginning balance	\$10,000
Add: Depreciation for 2018	<u>23,000</u>
	33,000
Deduct: Sale of equipment	<u>5,000</u>
Ending balance	<u>\$28,000</u>

The company must add back to net income the total depreciation of \$33,000 (\$10,000 + \$23,000) charged to the income statement, to determine net cash flow from operating activities.

- **Loss on Sale of Equipment.** Tax Consultants Inc. sold for \$34,000 equipment that cost \$41,000 and had a book value of \$36,000. As a result, the company reported a loss of \$2,000 on its sale. To arrive at net cash flow from operating activities, it must add back to net income the loss on the sale of the equipment. The reason is that the loss is a noncash charge to the income statement. The loss did not reduce cash, but it did reduce net income.⁵

From the foregoing items, the company prepares the operating activities section of the statement of cash flows, as shown in Illustration 23-15.

ILLUSTRATION 23-15

Operating Activities Section
of Cash Flow Statement

Cash flows from operating activities		
Net income		\$125,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 33,000	
Loss on sale of equipment	2,000	
Increase in accounts receivable	(42,000)	
Increase in inventory	(54,000)	
Decrease in prepaid expenses	2,000	
Decrease in accounts payable	<u>(7,000)</u>	<u>(66,000)</u>
Net cash provided by operating activities		59,000

⁵A similar adjustment is required for unrealized gains or losses recorded on trading security investments or other financial assets and liabilities accounted for under the fair value option. Marking these assets and liabilities to fair value results in an increase or decrease in income, but there is no effect on cash flows.

Step 3: Determine Net Cash Flows from Investing and Financing Activities. By analyzing the remaining changes in the balance sheet accounts, Tax Consultants identifies cash flows from investing and financing activities.

- **Land.** Land decreased \$25,000 during the period. As indicated from the information presented, the company sold land for cash at its book value. This transaction is an investing activity, reported as a \$25,000 source of cash.
- **Equipment.** An analysis of the Equipment account indicates the following.

Beginning balance	\$ 68,000
Purchase of equipment	166,000
	<u>234,000</u>
Deduct: Sale of equipment	41,000
Ending balance	<u>\$193,000</u>

The company used cash to purchase equipment with a fair value of \$166,000—an investing transaction reported as a cash outflow. The sale of the equipment for \$34,000 is also an investing activity, but one that generates a cash inflow.

- **Bonds Payable.** Bonds payable decreased \$40,000 during the year. As indicated from the additional information, the company redeemed the bonds at their book value. This financing transaction used \$40,000 of cash.
- **Common Stock.** The Common Stock account increased \$160,000 during the year. As indicated from the additional information, Tax Consultants issued common stock of \$160,000 at par. This financing transaction provided cash of \$160,000.
- **Retained Earnings.** Retained earnings changed \$70,000 (\$206,000 – \$136,000) during the year. The \$70,000 change in retained earnings results from net income of \$125,000 from operations and the financing activity of paying cash dividends of \$55,000.

Statement of Cash Flows—2018. Tax Consultants Inc. combines the foregoing items to prepare the statement of cash flows shown in Illustration 23-16.

TAX CONSULTANTS INC.

ILLUSTRATION 23-16
Statement of Cash Flows,
Tax Consultants Inc., Year 3

Sources of Information for the Statement of Cash Flows

Important points to remember in the preparation of the statement of cash flows are these:

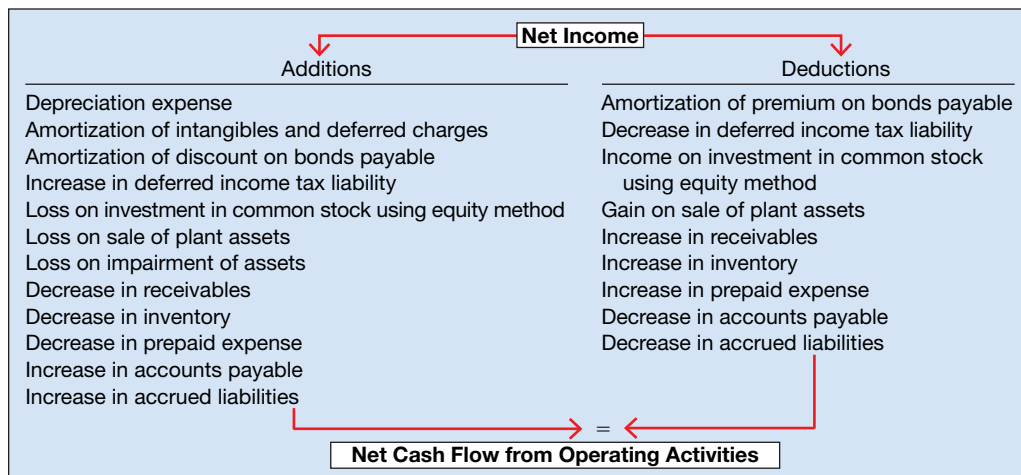

1. Comparative balance sheets provide the basic information from which to prepare the report. Additional information obtained from analyses of specific accounts is also included.
2. An analysis of the Retained Earnings account is necessary. The net increase or decrease in Retained Earnings without any explanation is a meaningless amount in the statement. Without explanation, it might represent the effect of net income, dividends declared, or prior period adjustments.
3. The statement includes all changes that have passed through cash or have resulted in an increase or decrease in cash.
4. Write-downs, amortization charges, and similar “book” entries, such as depreciation of plant assets, represent neither inflows nor outflows of cash because they have no effect on cash. To the extent that they have entered into the determination of net income, however, the company must add them back to or subtract them from net income, to arrive at net cash provided (used) by operating activities.

Indirect Method—Additional Adjustments

For consistency and comparability and because it is the most widely used method in practice, we used the indirect method in the Tax Consultants’ illustrations. We determined net cash flow from operating activities by adding back to or deducting from net income those items that had no effect on cash. Illustration 23-17 presents a more complete set of common adjustments that companies make to net income to arrive at net cash flow from operating activities.

ILLUSTRATION 23-17

Adjustments Needed to Determine Net Cash Flow from Operating Activities—Indirect Method

The additions and deductions in Illustration 23-17 reconcile net income to net cash flow from operating activities, illustrating why the indirect method is also called the reconciliation method.

LEARNING OBJECTIVE 3

Contrast the direct and indirect methods of calculating net cash flow from operating activities.

Net Cash Flow from Operating Activities—Direct Method

Two different methods are available to adjust income from operations on an accrual basis to net cash flow from operating activities. We showed the indirect method in the Tax Consultants’ illustrations in the prior sections.

The **direct method** reports cash receipts and cash disbursements from operating activities. The difference between these two amounts is the net cash flow from operating

activities. In other words, the direct method deducts operating cash disbursements from operating cash receipts. The direct method results in the presentation of a condensed cash receipts and cash disbursements statement.

As indicated from the accrual-based income statement (see Illustration 23-4 on page 1336), Tax Consultants reported revenues of \$125,000. However, because the company's accounts receivable increased during 2016 by \$36,000, the company collected only \$89,000 (\$125,000 – \$36,000) in cash from these revenues. Similarly, Tax Consultants reported operating expenses of \$85,000. However, accounts payable increased during the period by \$5,000. Assuming that these payables relate to operating expenses, cash operating expenses were \$80,000 (\$85,000 – \$5,000). Because no taxes payable exist at the end of the year, the company must have paid \$6,000 income tax expense for 2016 in cash during the year. Tax Consultants computes net cash flow from operating activities as shown in Illustration 23-18.

Cash collected from revenues	\$89,000
Cash payments for expenses	<u>80,000</u>
Income before income taxes	9,000
Cash payments for income taxes	<u>6,000</u>
Net cash provided by operating activities	<u>\$ 3,000</u>

ILLUSTRATION 23-18
Computation of Net Cash Flow from Operating Activities, Year 1 — Direct Method

“Net cash provided by operating activities” is the equivalent of cash basis net income. (“Net cash used by operating activities” is equivalent to cash basis net loss.)

The FASB encourages use of the direct method and permits use of the indirect method. Yet, if the direct method is used, the Board requires that companies provide in a separate schedule a reconciliation of net income to net cash flow from operating activities. Therefore, under either method, companies must prepare and report information from the indirect (reconciliation) method.

Direct Method—Expanded Example

Under the direct method, the statement of cash flows reports net cash flow from operating activities as major classes of *operating cash receipts* (e.g., cash collected from customers and cash received from interest and dividends) and *cash disbursements* (e.g., cash paid to suppliers for goods, to employees for services, to creditors for interest, and to government authorities for taxes).

We illustrate the direct method here in more detail to help you understand the difference between accrual-based income and net cash flow from operating activities. This example also illustrates the data needed to apply the direct method. Emig Company, which began business on January 1, 2017, has the following selected balance sheet information.

	December 31, 2017	January 1, 2017
Cash	\$159,000	–0–
Accounts receivable	15,000	–0–
Inventory	160,000	–0–
Prepaid expenses	8,000	–0–
Property, plant, and equipment (net)	90,000	–0–
Accounts payable	60,000	–0–
Accrued expenses payable	20,000	–0–

ILLUSTRATION 23-19
Balance Sheet Accounts, Emig Co.

Emig Company's December 31, 2017, income statement and additional information are presented in Illustration 23-20 (on page 1348).

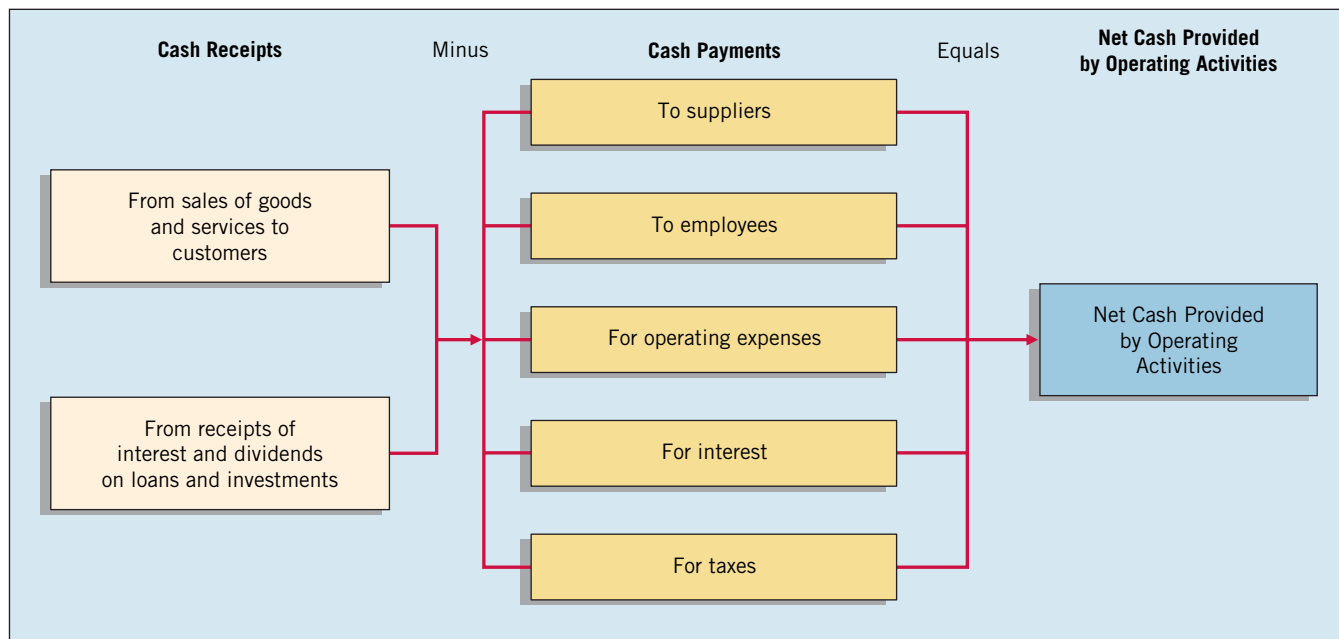

ILLUSTRATION 23-20Income Statement,
Emig Co.

Sales revenue		\$780,000
Cost of goods sold		<u>450,000</u>
Gross profit		330,000
Operating expenses	\$160,000	
Depreciation	<u>10,000</u>	<u>170,000</u>
Income before income taxes		160,000
Income tax expense		<u>48,000</u>
Net income		<u><u>\$112,000</u></u>

Additional Information

(a) Dividends of \$70,000 were declared and paid in cash.
 (b) The accounts payable increase resulted from the purchase of merchandise.
 (c) Prepaid expenses and accrued expenses payable relate to operating expenses.

Under the **direct method**, companies compute net cash provided by operating activities by **adjusting each item in the income statement** from the accrual basis to the cash basis. To simplify and condense the operating activities section, only major classes of operating cash receipts and cash payments are reported. As Illustration 23-21 shows, the difference between these major classes of cash receipts and cash payments is the net cash provided by operating activities.

ILLUSTRATION 23-21Major Classes of Cash
Receipts and Payments

An efficient way to apply the direct method is to analyze the revenues and expenses reported in the income statement in the order in which they are listed. The company then determines cash receipts and cash payments related to these revenues and expenses. In the following sections, we present the direct method adjustments for Emig Company in 2017, to determine net cash provided by operating activities.

Cash Receipts from Customers. The income statement for Emig Company reported revenues from customers of \$780,000. To determine cash receipts from customers, the company considers the change in accounts receivable during the year.

When accounts receivable increase during the year, revenues on an accrual basis are higher than cash receipts from customers. In other words, operations led to increased revenues, but not all of these revenues resulted in cash receipts. To determine the amount of increase in cash receipts, deduct the amount of the increase in accounts receivable

from the total sales revenue. Conversely, a decrease in accounts receivable is added to sales revenue because cash receipts from customers then exceed sales revenue.

For Emig Company, accounts receivable increased \$15,000. Thus, cash receipts from customers were \$765,000, computed as follows.

Sales revenue	\$780,000
Deduct: Increase in accounts receivable	<u>15,000</u>
Cash receipts from customers	<u><u>\$765,000</u></u>

Emig could also determine cash receipts from customers by analyzing the Accounts Receivable account as shown below.

Accounts Receivable			
1/1/17	Balance	–0–	Receipts from customers
	Sales revenue	780,000	765,000
12/31/17	Balance	15,000	

Illustration 23-22 shows the relationships between cash receipts from customers, sales revenue, and changes in accounts receivable.

Cash Receipts from Customers	=	Sales Revenue	{	+ Decrease in Accounts Receivable or – Increase in Accounts Receivable
---	---	--------------------------	---	---

ILLUSTRATION 23-22
Formula to Compute Cash Receipts from Customers

Cash Payments to Suppliers. Emig Company reported cost of goods sold on its income statement of \$450,000. To determine cash payments to suppliers, the company first finds purchases for the year, by adjusting cost of goods sold for the change in inventory. When inventory increases during the year, purchases this year exceed cost of goods sold. As a result, the company adds the increase in inventory to cost of goods sold, to arrive at purchases.

In 2017, Emig Company's inventory increased \$160,000. The company computes purchases as follows.

Cost of goods sold	\$450,000
Add: Increase in inventory	<u>160,000</u>
Purchases	<u><u>\$610,000</u></u>

After computing purchases, Emig determines cash payments to suppliers by adjusting purchases for the change in accounts payable. When accounts payable increase during the year, purchases on an accrual basis are higher than they are on a cash basis. As a result, the company deducts from purchases the increase in accounts payable to arrive at cash payments to suppliers. Conversely, if cash payments to suppliers exceed purchases, Emig adds to purchases the decrease in accounts payable. Cash payments to suppliers were \$550,000, computed as follows.

Purchases	\$610,000
Deduct: Increase in accounts payable	<u>60,000</u>
Cash payments to suppliers	<u><u>\$550,000</u></u>

Emig also can determine cash payments to suppliers by analyzing Accounts Payable, as shown below.

Accounts Payable			
Payments to suppliers	550,000	1/1/17	Balance
			–0–
			Purchases
			610,000
		12/31/17	Balance
			60,000

Illustration 23-23 shows the relationships between cash payments to suppliers, cost of goods sold, changes in inventory, and changes in accounts payable.

ILLUSTRATION 23-23

Formula to Compute Cash Payments to Suppliers

$$\text{Cash Payments to Suppliers} = \text{Cost of Goods Sold} \left\{ \begin{array}{l} + \text{Increase in Inventory} \\ \text{or} \\ - \text{Decrease in Inventory} \end{array} \right\} \left\{ \begin{array}{l} + \text{Decrease in Accounts Payable} \\ \text{or} \\ - \text{Increase in Accounts Payable} \end{array} \right\}$$

Cash Payments for Operating Expenses. Emig reported operating expenses of \$160,000 on its income statement. To determine the cash paid for operating expenses, it must adjust this amount for any changes in prepaid expenses and accrued expenses payable.

For example, when prepaid expenses increased \$8,000 during the year, cash paid for operating expenses was \$8,000 higher than operating expenses reported on the income statement. To convert operating expenses to cash payments for operating expenses, the company adds to operating expenses the increase of \$8,000. Conversely, if prepaid expenses decrease during the year, it deducts from operating expenses the amount of the decrease.

Emig also must adjust operating expenses for changes in accrued expenses payable. When accrued expenses payable increase during the year, operating expenses on an accrual basis are higher than they are on a cash basis. As a result, the company deducts from operating expenses an increase in accrued expenses payable, to arrive at cash payments for operating expenses. Conversely, it adds to operating expenses a decrease in accrued expenses payable, because cash payments exceed operating expenses.

Emig's cash payments for operating expenses were \$148,000, computed as follows.

Operating expenses	\$160,000
Add: Increase in prepaid expenses	8,000
Deduct: Increase in accrued expenses payable	20,000
Cash payments for operating expenses	<u>\$148,000</u>

The relationships among cash payments for operating expenses, changes in prepaid expenses, and changes in accrued expenses payable are shown in Illustration 23-24.

ILLUSTRATION 23-24

Formula to Compute Cash Payments for Operating Expenses

$$\text{Cash Payments for Operating Expenses} = \text{Operating Expenses} \left\{ \begin{array}{l} + \text{Increase in Prepaid Expense} \\ \text{or} \\ - \text{Decrease in Prepaid Expense} \end{array} \right\} \left\{ \begin{array}{l} + \text{Decrease in Accrued Expenses Payable} \\ \text{or} \\ - \text{Increase in Accrued Expenses Payable} \end{array} \right\}$$

Note that the company did not consider depreciation expense because it is a non-cash charge.

Cash Payments for Income Taxes. The income statement for Emig shows income tax expense of \$48,000. This amount equals the cash paid. How do we know that? Because the comparative balance sheet indicated no income taxes payable (or deferred tax assets or liabilities) at either the beginning or end of the year.

Summary of Net Cash Flow from Operating Activities—Direct Method

The following schedule summarizes the computations illustrated above.

Accrual Basis	Adjustment	Add (Subtract)	Cash Basis	
Sales revenue	\$780,000	– Increase in accounts receivable	\$ (15,000)	\$765,000
Cost of goods sold	450,000	+ Increase in inventory	160,000	550,000
		– Increase in accounts payable	(60,000)	
Operating expenses	160,000	+ Increase in prepaid expenses	8,000	
		– Increase in accrued expenses payable	(20,000)	148,000
Depreciation expense	10,000	– Depreciation expense	(10,000)	–0–
Income tax expense	48,000			48,000
Total expense	668,000			746,000
Net income	\$112,000	Net cash provided by operating activities		\$ 19,000

ILLUSTRATION 23-25

Accrual Basis to Cash Basis

Illustration 23-26 shows the presentation of the direct method for reporting net cash flow from operating activities for the Emig Company illustration.

EMIG COMPANY STATEMENT OF CASH FLOWS (PARTIAL)		
Cash flows from operating activities		
Cash received from customers		\$765,000
Cash payments:		
To suppliers	\$550,000	
For operating expenses	148,000	
For income taxes	48,000	746,000
Net cash provided by operating activities		\$ 19,000

ILLUSTRATION 23-26

Operating Activities
Section—Direct Method,
2017

If Emig Company uses the direct method to present the net cash flow from operating activities, it must provide in a separate schedule the reconciliation of net income to net cash provided by operating activities. The reconciliation assumes the identical form and content of the indirect method of presentation, as the following shows.

EMIG COMPANY RECONCILIATION		
Net income		\$112,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 10,000	
Increase in accounts receivable	(15,000)	
Increase in inventory	(160,000)	
Increase in prepaid expenses	(8,000)	
Increase in accounts payable	60,000	
Increase in accrued expense payable	20,000	(93,000)
Net cash provided by operating activities		\$ 19,000

ILLUSTRATION 23-27

Reconciliation of Net
Income to Net Cash
Provided by Operating
Activities

When the direct method is used, the company may present this reconciliation at the bottom of the statement of cash flows or in a separate schedule.

EVOLVING ISSUE

DIRECT VERSUS INDIRECT

The most contentious decision that the FASB faced related to cash flow reporting was choosing between the direct method and the indirect method of determining net cash flow from operating activities. Companies lobbied *against* the direct method, urging adoption of the indirect method. However, commercial lending officers expressed to the FASB a strong preference in favor of the direct method. What are the arguments in favor of each of the methods?

In Favor of the Direct Method

The principal advantage of the direct method is that **it shows operating cash receipts and payments**. Thus, it is more consistent with the objective of a statement of cash flows—to provide information about cash receipts and cash payments—than the indirect method, which does not report operating cash receipts and payments.

Supporters of the direct method contend that knowledge of the specific sources of operating cash receipts and the purposes for which operating cash payments were made in past periods is useful in estimating future operating cash flows. Furthermore, information about amounts of major classes of operating cash receipts and payments is more useful than information only about their arithmetic sum (the net cash flow from operating activities). Such information is more revealing of a company's ability (1) to generate sufficient cash from operating activities to pay its debts, (2) to reinvest in its operations, and (3) to make distributions to its owners. [3]

Indeed, a comprehensive review of academic research related to direct method cash flow presentation indicates that financial statement users prefer the direct method and that the direct method generally provides decision-useful information.

That is, the direct method information is reflected in stock prices indicating that users appear to utilize this information when available.

Many companies indicate that they do not currently collect information in a manner that allows them to determine amounts such as cash received from customers or cash paid to suppliers directly from their accounting systems. But supporters of the direct method contend that the incremental cost of determining operating cash receipts and payments is not significant.

In Favor of the Indirect Method

The principal advantage of the indirect method is that **it focuses on the differences between net income and net cash flow from operating activities**. That is, it provides a useful link between the statement of cash flows and the income statement and balance sheet.

Many companies contend that it is less costly to adjust net income to net cash flow from operating activities (indirect) than it is to report gross operating cash receipts and payments (direct). Supporters of the indirect method also state that the direct method, which effectively reports income statement information on a cash rather than an accrual basis, may erroneously suggest that net cash flow from operating activities is as good as, or better than, net income as a measure of performance.

In their joint financial statement presentation project, the FASB and the IASB proposed to allow only the direct method. However, there has been significant pushback on this proposal, which suggests that the choice of either the direct or indirect method will continue to be available.

See <http://www.fasb.org>; click on Projects and then Search on Inactive Joint FASB/IASB Projects. See also T. Whitehouse, "FASB Proposal May Foreshadow Changes to Cash Flow Rules," *www.complianceweek.com* (April 24, 2015).

Special Reporting Rules Applying to Direct and Indirect Methods

Companies that use the direct method are required, at a minimum, to report separately the following classes of operating cash receipts and payments:

Receipts

1. Cash collected from customers (including lessees, licensees, etc.).
2. Interest and dividends received.
3. Other operating cash receipts, if any.

Payments

1. Cash paid to employees and suppliers of goods or services (including suppliers of insurance, advertising, etc.).
2. Interest paid.
3. Income taxes paid.
4. Other operating cash payments, if any.

INTERNATIONAL PERSPECTIVE

Consolidated statements of cash flows may be of limited use to analysts evaluating multinational companies. Without disaggregation, users of such statements are not able to determine "where in the world" the funds are sourced and used.

The FASB encourages companies to provide further breakdowns of operating cash receipts and payments that they consider meaningful.

Companies using the indirect method must disclose separately changes in inventory, receivables, and payables in order to reconcile net income to net cash flow from operating activities. In addition, they must disclose, elsewhere in the financial statements or in accompanying notes, interest paid (net of amount capitalized) and income taxes paid.⁶ The FASB requires these separate and additional disclosures so that users may approximate the direct method. Also, an acceptable alternative presentation of the indirect method is to report net cash flow from operating activities as a single line item in the statement of cash flows and to present the reconciliation details elsewhere in the financial statements.

Finally, the FASB **encourages** the use of the direct method over the indirect method. If a company uses the direct method of reporting net cash flow from operating activities, the FASB **requires** that the company provide in a separate schedule a reconciliation of net income to net cash flow from operating activities. If a company uses the indirect method, it can either report the reconciliation within the statement of cash flows or can provide it in a separate schedule, with the statement of cash flows reporting only the **net** cash flow from operating activities. [4]

SPECIAL PROBLEMS IN STATEMENT PREPARATION

We discussed some of the special problems related to preparing the statement of cash flows in connection with the preceding illustrations. Other problems that arise with some frequency in the preparation of this statement include the following.

1. Adjustments to net income.
2. Accounts receivable (net).
3. Other working capital changes.
4. Net losses.
5. Significant noncash transactions.

Adjustments to Net Income

Depreciation and Amortization

Depreciation expense is the most common adjustment to net income that companies make to arrive at net cash flow from operating activities. But there are numerous other noncash expense or revenue items. Examples of expense items that companies must add back to net income are the **amortization of limited-life intangible assets** such as patents, and the **amortization of deferred costs** such as bond issue costs. These charges to expense involve expenditures made in prior periods that a company amortizes currently. These charges reduce net income without affecting cash in the current period.

Also, **amortization of bond discount or premium** on long-term bonds payable affects the amount of interest expense. However, neither affects cash. As a result, a company should add back discount amortization and subtract premium amortization from net income to arrive at net cash flow from operating activities.

Postretirement Benefit Costs

If a company has postretirement costs such as an employee pension plan, chances are that the pension expense recorded during a period will either be higher or lower than the cash funded. It will be higher when there is an increase in the unfunded liability and will be lower when there is a decrease. When the expense is higher or lower than

LEARNING OBJECTIVE 4

Discuss special problems in preparing a statement of cash flows.

⁶*Accounting Trends and Techniques* indicates that of the 500 companies surveyed, 207 disclosed interest paid in notes to the financial statements, 257 disclosed interest paid at the bottom of the statement of cash flows, 7 disclosed interest paid within the statement of cash flows, and 29 reported no separate amount. Income taxes paid during the year were disclosed in a manner similar to interest payments.

the cash paid, **the company must adjust net income by the difference between cash paid and the expense reported** in computing net cash flow from operating activities.

Changes in Deferred Income Taxes

Changes in deferred income taxes affect net income but have no effect on cash. For example, **Delta Air Lines** reported an increase in its liability for deferred taxes of approximately \$1.2 billion. This change in the liability increased tax expense and decreased net income, but did not affect cash. Therefore, Delta added back \$1.2 billion to net income on its statement of cash flows.

Equity Method of Accounting

Another common adjustment to net income is **a change related to an investment in common stock** when recording income or loss under the equity method. Recall that under the equity method, the investor (1) debits the investment account and credits revenue for its share of the investee's net income, and (2) credits dividends received to the investment account. Therefore, the net increase in the investment account does not affect cash flow. A company must deduct the net increase from net income to arrive at net cash flow from operating activities.

Assume that Victor Co. owns 40 percent of Milo Inc. During the year, Milo reports net income of \$100,000 and pays a cash dividend of \$30,000. Victor reports this in its statement of cash flows as a deduction from net income in the following manner—Equity in earnings of Milo, net of dividends, \$28,000 $[(\$100,000 - \$30,000) \times 40\%]$.

Losses and Gains

Realized Losses and Gains. In the illustration for Tax Consultants, the company experienced a loss of \$2,000 from the sale of equipment. The company added this loss to net income to compute net cash flow from operating activities because **the loss is a noncash charge in the income statement**.

If Tax Consultants experiences a **gain** from a sale of equipment, it too requires an adjustment to net income. Because a company reports the gain in the statement of cash flows as part of the cash proceeds from the sale of equipment under investing activities, **it deducts the gain from net income to avoid double-counting**—once as part of net income and again as part of the cash proceeds from the sale.

To illustrate, assume that Lynch Co. had land with a carrying value of \$100,000 that it sold for \$110,000, resulting in a gain of \$10,000. In the statement of cash flows (indirect method), the company would deduct the \$10,000 gain from net income in the operating activities section. It would report the \$110,000 cash inflow from the sale as an investing activity, as follows.

Cash flows from investing activities	
Sale of land	\$110,000

Unrealized Losses and Gains. Unrealized losses and gains often result for investments in debt and equity securities. For example, assume that **Target** purchases the following three investments on January 10, 2017:

1. Debt investment for \$1 million that is classified as trading. During 2017, the debt investment has an unrealized holding gain of \$110,000 (recorded in net income).
2. Debt investment for \$600,000 that is classified as available-for-sale. During 2017, the available-for-sale debt investment has an unrealized holding loss of \$50,000 (recorded in other comprehensive income).
3. Equity investment for \$200,000 in the stock of Groesch Company (the number of shares purchased represents less than 20 percent of Groesch common stock). During 2017, the Groesch investment has an unrealized holding gain of \$15,000 (recorded in net income).

For Target, the unrealized holding gain of \$110,000 on the debt investment increases net income but does not increase net cash flow from operating activities. As a result, the unrealized holding gain of \$110,000 is deducted from net income to compute net cash flow from operating activities.

On the other hand, the unrealized holding loss of \$50,000 that Target incurs on the available-for-sale debt investment does not affect net income or cash flows—this loss is reported in the other comprehensive income section. As a result, no adjustment to net income is necessary in computing net cash flow from operating activities.

Finally, the unrealized holding gain of \$15,000 on the equity investment increases net income but does not increase net cash flow from operating activities. As a result, the unrealized holding gain of \$15,000 is deducted from net income to compute net cash flow from operating activities.

Thus, the general rule is that unrealized holding gains or losses that affect net income must be adjusted to determine net cash flow from operating activities. Conversely, unrealized holding gains or losses that do not affect net income are not adjusted to determine net cash flow from operating activities.

Stock Options

Recall for share-based compensation plans that companies are required to use the fair value method to determine total compensation cost. The compensation cost is then recognized as an expense in the periods in which the employee provides services. When Compensation Expense is debited, Paid-in Capital—Stock Options is often credited. Cash is not affected by recording the expense. **Therefore, the company must increase net income by the amount of compensation expense from stock options in computing net cash flow from operating activities.**

To illustrate how this information should be reported on a statement of cash flows, assume that First Wave Inc. grants 5,000 options to its CEO, Ann Johnson. Each option entitles Johnson to purchase one share of First Wave's \$1 par value common stock at \$50 per share at any time in the next two years (the service period). The fair value of the options is \$200,000. First Wave records compensation expense in the first year as follows.

Compensation Expense (\$200,000 ÷ 2)	100,000	
Paid-in Capital—Stock Options		100,000

In addition, if we assume that First Wave has a 35 percent tax rate, it would recognize a deferred tax asset of \$35,000 ($\$100,000 \times 35\%$) in the first year as follows.

Deferred Tax Asset	35,000	
Income Tax Expense		35,000

Therefore, on the statement of cash flows for the first year, First Wave reports the following (assuming a net income of \$600,000).

Net income	\$600,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Share-based compensation expense	100,000
Increase in deferred tax asset	(35,000)

As shown in First Wave's statement of cash flows, it adds the share-based compensation expense to net income because it is a noncash expense. The increase in the deferred tax asset and the related reduction in income tax expense increase net income. Although the negative income tax expense increases net income, it does not increase cash. Therefore, it should be deducted.

Subsequently, if Ann Johnson exercises her options, First Wave reports "Cash provided by exercise of stock options" in the financing section of the statement of cash flows.⁷

⁷Companies receive a tax deduction related to share-based compensation plans at the time employees exercise their options. The amount of the deduction is equal to the difference between the market price of the stock and the exercise price at the date the employee purchases the stock, which in most cases is much larger than the total compensation expense recorded. When the tax deduction exceeds the total compensation recorded, this provides an additional cash inflow to the company. For example, in a recent year **Cisco Systems** reported an additional cash inflow related to its stock-option plans equal to \$537 million. Under current GAAP, this tax-related cash inflow is reported in the financing section of the statement of cash flows, although the Board is considering a change to the operating section. **[5]**

Unusual and Infrequent Items

Companies should report **either as investing activities or as financing activities** cash flows from unusual and infrequent transactions and other events whose effects are included in net income but which are not related to operations.

For example, assume that Tax Consultants had land with a carrying value of \$200,000, which was condemned by the state of Maine for a highway project. The condemnation proceeds received were \$205,000, resulting in a gain of \$5,000 less \$2,000 of taxes. In the statement of cash flows (indirect method), the company would deduct the \$5,000 gain from net income in the operating activities section. It would report the \$205,000 cash inflow from the condemnation as an investing activity, as follows.

UNDERLYING CONCEPTS

By rejecting the requirement to allocate taxes to the various activities, the FASB invoked the cost constraint. The information would be beneficial, but the cost of providing such information would exceed the benefits of providing it.

Cash flows from investing activities	
Condemnation of land	\$205,000

Note that Tax Consultants handles the gain at its **gross** amount (\$5,000), not net of tax. The company reports the cash received in the condemnation as an investing activity at \$205,000, also exclusive of the tax effect.

The FASB requires companies to classify **all income taxes paid as operating cash outflows**. Some suggested that income taxes paid be allocated to investing and financing transactions. But the Board decided that allocation of income taxes paid to operating, investing, and financing activities would be so complex and arbitrary that the benefits, if any, would not justify the costs involved. Under both the direct method and the indirect method, companies must disclose the total amount of income taxes paid.⁸

Accounts Receivable (Net)

Up to this point, we assumed no allowance for doubtful accounts—a contra account—to offset accounts receivable. However, if a company needs an allowance for doubtful accounts, how does that allowance affect the company's determination of net cash flow from operating activities? For example, assume that Redmark Co. reports net income of \$40,000. It has the accounts receivable balances as shown in Illustration 23-28.

ILLUSTRATION 23-28

Accounts Receivable Balances, Redmark Co.

	2017	2016	Change Increase/Decrease
Accounts receivable	\$105,000	\$90,000	\$15,000 Increase
Allowance for doubtful accounts	(10,000)	(4,000)	6,000 Increase
Accounts receivable (net)	<u>\$ 95,000</u>	<u>\$86,000</u>	9,000 Increase

Indirect Method

Because an increase in Allowance for Doubtful Accounts results from a charge to bad debt expense, a company should add back an increase in Allowance for Doubtful Accounts to net income to arrive at net cash flow from operating activities. Illustration 23-29 shows one method for presenting this information in a statement of cash flows.

⁸For an insightful article on some weaknesses and limitations in the statement of cash flows, see Hugo Nurnberg, "Inconsistencies and Ambiguities in Cash Flow Statements Under FASB Statement No. 95," *Accounting Horizons* (June 1993), pp. 60–73. Nurnberg identifies the inconsistencies caused by the three-way classification of all cash receipts and cash payments, gross versus net of tax, the ambiguous disclosure requirements for noncash investing and financing transactions, and the ambiguous presentation of third-party financing transactions. See also Paul B. W. Miller and Bruce P. Budge, "Nonarticulation in Cash Flow Statements and Implications for Education, Research, and Practice," *Accounting Horizons* (December 1996), pp. 1–15; and Charles Mulford and Michael Ely, "Calculating Sustainable Cash Flow: A Study of the S&P 100," *Georgia Tech Financial Analysis Lab* (October 2004).

REDMARK CO. STATEMENT OF CASH FLOWS (PARTIAL) FOR THE YEAR 2017		
Cash flows from operating activities		
Net income		\$40,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(15,000)	
Increase in allowance for doubtful accounts	6,000	(9,000)
		<u>\$31,000</u>

ILLUSTRATION 23-29
Presentation of Allowance for Doubtful Accounts—Indirect Method

As we indicated, the increase in the Allowance for Doubtful Accounts balance results from a charge to bad debt expense for the year. Because bad debt expense is a noncash charge, a company must add it back to net income in arriving at net cash flow from operating activities.

Instead of separately analyzing the allowance account, a shortcut approach is to net the allowance balance against the receivable balance and compare the change in accounts receivable on a net basis. Illustration 23-30 shows this presentation.

REDMARK CO. STATEMENT OF CASH FLOWS (PARTIAL) FOR THE YEAR 2017		
Cash flows from operating activities		
Net income		\$40,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable (net)		(9,000)
		<u>\$31,000</u>

ILLUSTRATION 23-30
Net Approach to Allowance for Doubtful Accounts—Indirect Method

This shortcut procedure works also if the change in the allowance account results from a write-off of accounts receivable. This reduces both Accounts Receivable and Allowance for Doubtful Accounts. No effect on cash flows occurs. *Because of its simplicity, use the net approach for your homework assignments.*

Direct Method

If using the direct method, a company **should not net** Allowance for Doubtful Accounts against Accounts Receivable. To illustrate, assume that Redmark Co.'s net income of \$40,000 consisted of the items shown in Illustration 23-31.

REDMARK CO. INCOME STATEMENT FOR THE YEAR 2017		
Sales revenue		\$100,000
Expenses		
Salaries	\$46,000	
Utilities	8,000	
Bad debts	6,000	60,000
Net income		<u>\$ 40,000</u>

ILLUSTRATION 23-31
Income Statement, Redmark Co.

If Redmark deducts the \$9,000 increase in accounts receivable (net) from sales for the year, it would report cash sales at \$91,000 (\$100,000 – \$9,000) and cash payments for operating expenses at \$60,000. Both items would be misstated: Cash sales should be

reported at \$85,000 (\$100,000 – \$15,000), and total cash payments for operating expenses should be reported at \$54,000 (\$60,000 – \$6,000). Illustration 23-32 shows the proper presentation.

ILLUSTRATION 23-32

Bad Debts—Direct Method

REDMARK CO.		
STATEMENT OF CASH FLOWS (PARTIAL)		
FOR THE YEAR 2017		
<hr/>		
Cash flows from operating activities		
Cash received from customers		\$85,000
Salaries paid	\$46,000	
Utilities paid	8,000	54,000
		<hr/>
Net cash provided by operating activities		<u>\$31,000</u>

An added complication develops when a company writes off accounts receivable. Simply adjusting sales for the change in accounts receivable will not provide the proper amount of cash sales. The reason is that the write-off of the accounts receivable is not a cash collection. Thus, an additional adjustment is necessary.

WHAT DO THE NUMBERS MEAN?

The controversy over direct and indirect methods highlights the importance that the market attributes to operating cash flow. By showing an improving cash flow, a company can give a favorable impression of its ongoing operations. For example, **WorldCom** concealed declines in its operations by capitalizing certain operating expenses—to the tune of \$3.8 billion! This practice not only “juiced up” income but also made it possible to report the cash payments in the investing section of the cash flow statement rather than as a deduction from operating cash flow.

The SEC recently addressed a similar cash flow classification issue with automakers like **Ford**, **GM**, and **Chrysler**. For years, automakers classified lease receivables and other dealer-financing arrangements as investment cash flows. Thus, they reported an increase in lease or loan receivables from cars sold as a use of cash in the investing section of the statement of cash flows. The SEC objected and now requires automakers to report these receivables as operating cash flows, since the leases and loans are used to facilitate car sales. At GM, these reclassifications reduced its operating cash flows from \$7.6 billion to \$3 billion in the year before the change.

Sources: Peter Elstrom, “How to Hide \$3.8 Billion in Expenses,” *BusinessWeek Online* (July 8, 2002); Judith Burns, “SEC Tells US Automakers to Retool Cash-Flow Accounting,” *Wall Street Journal Online* (February 28, 2005); Sarah Johnson, “Cash Flow: A Better Way to Know Your Bank?” *CFO.com* (July 9, 2009); and D. Katz, “FASB Revisits the Cash Flow Statement,” *CFO.com* (September 30, 2014).

NOT WHAT IT SEEMS

In the banking industry, how banks classify their investments, deposits, and cash flow from acquisitions results in huge swings in operating cash flows, both downward (**Bank of America**) and upward (**KeyCorp**). According to one analyst, “As it stands now, banks can’t be reliably compared to each other by their recorded cash flow from operations . . . operating cash flow for a bank is basically meaningless.” Another questionable cash flow classification for banks is the characterization of increases and decreases in deposits as financing cash flow. Many analysts believe customer-driven deposits should be accounted for under operating cash flow (rather than as a financing cash flow) since “the very health of a bank’s operations depends on its deposit base and its ability to attract a growing stream of deposits.” So while the overall cash flow—from operations, investing, and financing—remained the same, operating cash flow at these companies looked better than it really was. In response to cash flow classification debates, the FASB is working on a project to reduce diversity in practice and improve the usefulness of the statement of cash flows.

Other Working Capital Changes

Up to this point, we showed how companies handled all of the changes in working capital items (current asset and current liability items) as adjustments to net income in determining net cash flow from operating activities. You must be careful, however, because **some changes in working capital, although they affect cash, do not affect net income**. Generally, these are investing or financing activities of a current nature.

One activity is the purchase of **short-term available-for-sale debt securities**. For example, the purchase of short-term available-for-sale securities for \$50,000 cash has no

effect on net income but it does cause a \$50,000 decrease in cash. A company reports this transaction as a cash flow from investing activities as follows. [6]

Cash flows from investing activities	
Purchase of short-term available-for-sale securities	\$(50,000)

What about **trading securities**? Because companies hold these investments principally for the purpose of selling them in the near term, companies should classify the cash flows from purchases and sales of trading securities as cash flows from **operating activities**. [7]⁹

Another example is the issuance of a **short-term nontrade note payable** for cash. This change in a working capital item has no effect on income from operations but it increases cash by the amount of the note payable. For example, a company reports the issuance of a \$10,000 short-term note payable for cash in the statement of cash flows as follows.

Cash flows from financing activities	
Issuance of short-term note	\$10,000

Another change in a working capital item that has no effect on income from operations or on cash is a **cash dividend payable**. Although a company will report the cash dividends when paid as a financing activity, it does not report the declared but unpaid dividend on the statement of cash flows.

Net Losses

If a company reports a net loss instead of a net income, it must adjust the net loss for those items that do not result in a cash inflow or outflow. The net loss, after adjusting for the charges or credits not affecting cash, may result in a negative or a positive cash flow from operating activities.

For example, if the net loss is \$50,000 and the total amount of charges to add back is \$60,000, then net cash provided by operating activities is \$10,000. Illustration 23-33 shows this computation.

Net loss		\$(50,000)
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation of plant assets	\$55,000	
Amortization of patents	5,000	60,000
Net cash provided by operating activities		<u>\$ 10,000</u>

ILLUSTRATION 23-33
Computation of Net Cash Flow from Operating Activities—Cash Inflow

If the company experiences a net loss of \$80,000 and the total amount of the charges to add back is \$25,000, the presentation appears as follows.

Net loss		\$(80,000)
Adjustments to reconcile net income to net cash used by operating activities:		
Depreciation of plant assets	25,000	
Net cash used by operating activities		<u>\$(55,000)</u>

ILLUSTRATION 23-34
Computation of Net Cash Flow from Operating Activities—Cash Outflow

Although not illustrated in this chapter, a negative cash flow may result even if the company reports a net income.

⁹If the basis of the statement of cash flows is **cash and cash equivalents** and the short-term investment is considered a cash equivalent, then a company reports nothing in the statement because the transaction does not affect the balance of cash and cash equivalents. The Board notes that cash purchases of short-term investments generally are part of the company's cash management activities rather than part of its operating, investing, or financing activities.

Significant Noncash Transactions

Because the statement of cash flows reports only the effects of operating, investing, and financing activities in terms of cash flows, it omits some **significant noncash transactions** and other events that are investing or financing activities. Among the more common of these noncash transactions that a company should report or disclose in some manner are the following.

1. Acquisition of assets by assuming liabilities (including capital lease obligations) or by issuing equity securities.
2. Exchanges of nonmonetary assets.
3. Refinancing of long-term debt.
4. Conversion of debt or preferred stock to common stock.
5. Issuance of equity securities to retire debt.

A company does not incorporate these noncash items in the statement of cash flows. If material in amount, these disclosures may be either narrative or summarized in a separate schedule at the bottom of the statement, or they may appear in a separate note or supplementary schedule to the financial statements.¹⁰ Illustration 23-35 shows the presentation of these significant noncash transactions or other events in a separate schedule at the bottom of the statement of cash flows.

ILLUSTRATION 23-35
Schedule Presentation of
Noncash Investing and
Financing Activities

Net increase in cash	\$3,717,000
Cash at beginning of year	5,208,000
Cash at end of year	<u>\$8,925,000</u>
Noncash investing and financing activities	
Purchase of land and building through issuance of 250,000 shares of common stock	\$1,750,000
Exchange of Steadfast, NY, land for Bedford, PA, land	\$2,000,000
Conversion of 12% bonds to 50,000 shares of common stock	\$500,000

Or, companies may present these noncash transactions in a separate note, as shown in Illustration 23-36.

ILLUSTRATION 23-36
Note Presentation of
Noncash Investing and
Financing Activities

Note G: Significant noncash transactions. During the year, the company engaged in the following significant noncash investing and financing transactions:	
Issued 250,000 shares of common stock to purchase land and building	\$1,750,000
Exchanged land in Steadfast, NY, for land in Bedford, PA	\$2,000,000
Converted 12% bonds to 50,000 shares of common stock	\$500,000

Companies do not generally report certain other significant noncash transactions or other events in conjunction with the statement of cash flows. Examples of these types of transactions are **stock dividends, stock splits, and restrictions on retained earnings**. Companies generally report these items, neither financing nor investing activities, in conjunction with the statement of stockholders' equity or schedules and notes pertaining to changes in capital accounts.

¹⁰Some noncash investing and financing activities are part cash and part noncash. Companies should report only the cash portion on the statement of cash flows. The noncash component should be reported at the bottom of the statement or in a separate note. A study of significant noncash investing and financing activities found that the effects of these transactions—debt issued for capital assets and capital lease financing of capital assets—can have a significant effect on analysts' assessments of capital expenditures and free cash flow. Given the importance of noncash capital expenditures to calculations of free cash flow, the authors encourage the FASB to revise its stance regarding the exclusion of all noncash activities from the statement of cash flows. See C. Mulford and H. Nicholson, "Measuring the Effects of Non-Cash Investing and Financing Activities," *Journal of Applied Research in Accounting and Finance* (Vol. 9, No. 1, 2014), pp. 27–43.

WHAT DO THE NUMBERS MEAN?

As you have learned in your study of accounting, both accounting income (measured under accrual-accounting principles) and cash flow from operations can provide useful information. However, both measures are sometimes criticized. Accounting income is sometimes faulted for the multitude of judgments required to determine revenues and expenses. In addition, many companies can boost an earnings-based metric, return on equity, by piling on debt which also makes the company riskier, not better. On the other hand, cash flow performance metrics are criticized because they do not follow the revenue and expense recognition principles.

So what's a better way to measure how profitable companies really are? Or, adopting master investor Warren Buffett's view of investing: How do you find companies that consistently generate big returns on invested capital? Recently, a new measure of profitability, "COROA"—for cash operating return on assets—has been proposed to provide a better performance metric. The idea is to measure management's ability to generate pure cash returns, not cash expected in the future, on every dollar invested in property, plant, and equipment; R&D centers; inventories; and all other assets.

Specifically, COROA is computed by starting with the cash flow from operations amount and then adding back cash taxes and cash interest to calculate pure operating cash flows. That's the dollar amount that the company actually puts in its

coffers during the year—and which could be used to pay dividends, make "investments" by purchasing companies or divisions, and fund capital expenditures, especially those that propel growth. That's the numerator. Adjustments for taxes and interest are fundamental to this COROA measure. This is because falling taxes can create the illusion of ongoing progress. Interest is added back because it primarily reflects the level of leverage but has nothing to do with how well management is managing their assets.

The denominator consists of every dollar spent on the assets that produce those operating cash flows. To calculate that figure, take "total assets" from the balance sheet and add "accumulated depreciation" to account for operating assets that are still being used to make cars, semiconductors, or other products that, for accounting purposes, are fully expensed.

Thus, COROA—adjusted cash flow from operations as a percentage of total assets—is the ratio to keep an eye on. It's the best measure of pure profitability. If the number has been high for a while and is either staying high or improving, evidence is strong that the company is generating strong returns from its new investments. That's the quality that Buffett looks for. And according to accounting guru Jack Ciesielski, it's all about cash. "What's more important in the world than cash?" he asks. "Why, it's *more* cash, of course."

BETTER THAN ROA?

USE OF A WORKSHEET

When numerous adjustments are necessary or other complicating factors are present, companies often use a **worksheet to assemble and classify the data that will appear on the statement of cash flows**. The worksheet is merely a device that aids in the preparation of the statement. Its use is optional. Illustration 23-37 (on page 1362) shows the skeleton format of the worksheet for preparation of the statement of cash flows using the indirect method.

The following guidelines are important in using a worksheet.

1. In the balance sheet accounts section, **list accounts with debit balances separately from those with credit balances**. This means, for example, that Accumulated Depreciation is listed under credit balances and not as a contra account under debit balances. Enter the beginning and ending balances of each account in the appropriate columns. Then, enter the transactions that caused the change in the account balance during the year as reconciling items in the two middle columns.

After all reconciling items have been entered, each line pertaining to a balance sheet account should foot across. That is, the beginning balance plus or minus the reconciling item(s) must equal the ending balance. When this agreement exists for all balance sheet accounts, all changes in account balances have been reconciled.

2. The bottom portion of the worksheet consists of the operating, investing, and financing activities sections. Accordingly, it provides the information necessary to prepare the formal statement of cash flows. **Enter inflows of cash as debits in the reconciling columns, and outflows of cash as credits in the reconciling columns**. Thus, in this section, a company would enter the sale of equipment for cash at book value as a debit under inflows of cash from investing activities. Similarly, it would enter the purchase of land for cash as a credit under outflows of cash from investing activities.

LEARNING OBJECTIVE 5

Explain the use of a worksheet in preparing a statement of cash flows.

ILLUSTRATION 23-37

Format of Worksheet for Preparation of Statement of Cash Flows

XYZ COMPANY				
Statement of Cash Flows for the Year Ended...				
Balance Sheet Accounts	End of Prior Year Balances	Reconciling Items		End of Current Year Balances
		Debits	Credits	
Debit balance accounts	XX	XX	XX	XX
	XX	XX	XX	XX
Totals	XXX			XXX
Credit balance accounts	XX	XX	XX	XX
	XX	XX	XX	XX
Totals	XXX			XXX
Statement of Cash Flows Effects				
Operating activities				
Net income		XX		
Adjustments		XX	XX	
Investing activities				
Receipts and payments		XX	XX	
Financing activities				
Receipts and payments		XX	XX	
Totals		XXX	XXX	
Increase (decrease) in cash		(XX)	XX	
Totals		XXX	XXX	

3. Do not enter in any journal or post to any account the reconciling items shown in the worksheet. These items do not represent either adjustments or corrections of the balance sheet accounts. They are used only to facilitate the preparation of the statement of cash flows.

Preparation of the Worksheet

The preparation of a worksheet involves the following steps.

Step 1. Enter the balance sheet accounts and their beginning and ending balances in the balance sheet accounts section.

Step 2. Enter the data that explain the changes in the balance sheet accounts (other than cash) and their effects on the statement of cash flows in the reconciling columns of the worksheet.

Step 3. Enter the increase or decrease in cash on the cash line and at the bottom of the worksheet. This entry should enable the totals of the reconciling columns to be in agreement.

To illustrate the preparation and use of a worksheet and to illustrate the reporting of some of the special problems discussed in the prior section, we present a comprehensive example for Satellite Corporation. Again, the indirect method serves as the basis for the computation of net cash provided by operating activities. Illustrations 23-38 (page 1363) and 23-39 (page 1364) present the balance sheet, combined statement of income and retained earnings, and additional information for Satellite Corporation.

SATELLITE CORPORATION			
Comparative Balance Sheet—December 31, 2017 and 2016			
	2017	2016	Increase or (Decrease)
Assets			
Cash	\$ 59,000	\$ 66,000	\$ (7,000)
Accounts receivable (net)	104,000	51,000	53,000
Inventory	493,000	341,000	152,000
Prepaid expenses	16,500	17,000	(500)
Investment in Porter Co. (equity method)	18,500	15,000	3,500
Land	131,500	82,000	49,500
Equipment	187,000	142,000	45,000
Accumulated depreciation—equipment	(29,000)	(31,000)	(2,000)
Buildings	262,000	262,000	—
Accumulated depreciation—buildings	(74,100)	(71,000)	3,100
Trademarks	7,600	10,000	(2,400)
Total assets	\$1,176,000	\$884,000	
Liabilities			
Accounts payable	\$ 132,000	\$ 131,000	\$ 1,000
Accrued liabilities	43,000	39,000	4,000
Income taxes payable	3,000	16,000	(13,000)
Notes payable (long-term)	60,000	—	60,000
Bonds payable	100,000	100,000	—
Premium on bonds payable	7,000	8,000	(1,000)
Deferred tax liability (long-term)	9,000	6,000	3,000
Total liabilities	354,000	300,000	
Stockholders' Equity			
Common stock (\$1 par)	60,000	50,000	10,000
Paid-in capital in excess of par—common stock	187,000	38,000	149,000
Retained earnings	592,000	496,000	96,000
Treasury stock	(17,000)	—	17,000
Total stockholders' equity	822,000	584,000	
Total liabilities and stockholders' equity	\$1,176,000	\$884,000	

ILLUSTRATION 23-38
Comparative Balance Sheet, Satellite Corporation

The discussion that follows provides additional explanations related to the preparation of the worksheet.

Analysis of Transactions

The following discussion explains the individual adjustments that appear on the worksheet in Illustration 23-40 (page 1368). Because cash is the basis for the analysis, Satellite reconciles the Cash account last. Because income is the first item that appears on the statement of cash flows, it is handled first.

Change in Retained Earnings

Net income for the period is \$117,000. The entry for it on the worksheet is as follows.

	(1)	
Operating—Net Income		117,000
Retained Earnings		117,000

Satellite reports net income on the bottom section of the worksheet. This is the starting point for preparation of the statement of cash flows (under the indirect method).

ILLUSTRATION 23-39

Income and Retained Earnings Statements, Satellite Corporation

SATELLITE CORPORATION			
COMBINED STATEMENT OF INCOME AND RETAINED EARNINGS			
FOR THE YEAR ENDED DECEMBER 31, 2017			
Net sales			\$526,500
Other revenue			3,500
Total revenues			<u>530,000</u>
Expense			
Cost of goods sold	\$310,000		
Selling and administrative expenses	47,000		
Other expenses and losses	12,000		
Total expenses			369,000
Other gains and losses			
Gain on condemnation of land			6,000
Income before income taxes			167,000
Income taxes			
Current	47,000		
Deferred	3,000		50,000
Net income			117,000
Retained earnings, January 1			496,000
Less:			
Cash dividends	6,000		
Stock dividend	15,000		21,000
Retained earnings, December 31			<u>\$592,000</u>
Per share:			
Net income			<u>\$2.13</u>
Additional Information			
(a) Other revenue of \$3,500 represents Satellite's equity share in the net income of Porter Co., an equity investee. Satellite owns 22% of Porter Co.			
(b) An analysis of the equipment account and related accumulated depreciation indicates the following:			
	Equipment	Accum. Dep.	Gain or
	Dr./ (Cr.)	Dr./ (Cr.)	(Loss)
Balance at end of 2016	\$142,000	\$(31,000)	
Purchases of equipment	53,000		
Sale of equipment	(8,000)	2,500	\$(1,500)
Depreciation for the period		(11,500)	
Major repair charged to accumulated depreciation		11,000	
Balance at end of 2017	<u>\$187,000</u>	<u>\$(29,000)</u>	
(c) Land in the amount of \$60,000 was purchased through the issuance of a long-term note; in addition, certain parcels of land costing \$10,500 were condemned. The state government paid Satellite \$18,500, resulting in an \$8,000 gain.			
(d) The change in the Accumulated Depreciation—Buildings, Trademarks, and Premium on Bonds Payable accounts resulted from depreciation and amortization entries.			
(e) An analysis of the paid-in capital accounts in stockholders' equity discloses the following.			
	Common	Paid-In Capital in Excess of	
	Stock	Par—Common Stock	
Balance at end of 2016	\$50,000	\$ 38,000	
Issuance of 2% stock dividend	1,000	14,000	
Sale of stock for cash	9,000	135,000	
Balance at end of 2017	<u>\$60,000</u>	<u>\$187,000</u>	
(f) Interest paid (net of amount capitalized) is \$9,000; income taxes paid is \$47,000.			

A stock dividend and a cash dividend also affected retained earnings. The retained earnings statement reports a stock dividend of \$15,000. The worksheet entry for this transaction is as follows.

(2)		
Retained Earnings	15,000	
Common Stock		1,000
Paid-in Capital in Excess of Par—Common Stock		14,000

Retained Earnings		
(2)	15,000	Bal. 496,000
(3)	6,000	(1) 117,000
		Bal. 592,000

The issuance of stock dividends is not a cash operating, investing, or financing item. Therefore, **although the company enters this transaction on the worksheet for reconciling purposes, it does not report it in the statement of cash flows.**

The \$6,000 cash dividend paid represents a financing activity cash outflow. Satellite makes the following worksheet entry:

(3)		
Retained Earnings	6,000	
Financing—Cash Dividends		6,000

The company reconciles the beginning and ending balances of retained earnings by entry of the three items above.

Accounts Receivable (Net)

The increase in accounts receivable (net) of \$53,000 represents adjustments that did not result in cash inflows during 2017. As a result, the company would deduct from net income the increase of \$53,000. Satellite makes the following worksheet entry.

(4)		
Accounts Receivable (net)	53,000	
Operating—Increase in Accounts Receivable (net)		53,000

Inventory

The increase in inventory of \$152,000 represents an operating use of cash. The incremental investment in inventory during the year reduces cash without increasing the cost of goods sold. Satellite makes the following worksheet entry.

(5)		
Inventory	152,000	
Operating—Increase in Inventory		152,000

Prepaid Expense

The decrease in prepaid expenses of \$500 represents a charge in the income statement for which there was no cash outflow in the current period. Satellite should add that amount back to net income through the following entry.

(6)		
Operating—Decrease in Prepaid Expenses	500	
Prepaid Expenses		500

Investment in Stock

Satellite's investment in the stock of Porter Co. increased \$3,500. This amount reflects Satellite's share of net income earned by Porter (its equity investee) during the current year. Although Satellite's revenue and therefore its net income increased \$3,500 by recording Satellite's share of Porter Co.'s net income, no cash (dividend) was provided. Satellite makes the following worksheet entry.

(7)		
Equity Investments (Porter Co.)	3,500	
Operating—Equity in Earnings of Porter Co.		3,500

Land

Satellite purchased land in the amount of \$60,000 through the issuance of a long-term note payable. This transaction did not affect cash. It is a significant noncash investing/

financing transaction that the company would disclose either in a separate schedule below the statement of cash flows or in the accompanying notes. Satellite makes the following entry to reconcile the worksheet.

		(8)		
			Land	60,000
			Notes Payable	60,000
Land				
Bal. 82,000	(9) 10,500			
(8) 60,000				
Bal. 131,500				

In addition to the noncash transaction involving the issuance of a note to purchase land, the Land account was decreased by the condemnation proceedings. The following worksheet entry records the receipt of \$18,500 for land having a book value of \$10,500.

		(9)		
			Investing—Proceeds from Condemnation of Land	18,500
			Land	10,500
			Operating—Gain on Condemnation of Land	8,000

In reconciling net income to net cash flow from operating activities, Satellite deducts from net income the gain of \$8,000. The reason is that the transaction that gave rise to the gain is an item whose cash effect is already classified as an investing cash inflow. The Land account is now reconciled.

Equipment and Accumulated Depreciation

An analysis of Equipment and Accumulated Depreciation—Equipment shows that a number of transactions have affected these accounts. The company purchased equipment in the amount of \$53,000 during the year. Satellite records this transaction on the worksheet as follows.

		(10)		
			Equipment	53,000
			Investing—Purchase of Equipment	53,000

In addition, Satellite sold at a loss of \$1,500 equipment with a book value of \$5,500. It records this transaction as follows.

		(11)		
			Investing—Sale of Equipment	4,000
			Operating—Loss on Sale of Equipment	1,500
			Accumulated Depreciation—Equipment	2,500
Equipment				
Bal. 142,000	(11) 8,000			
(10) 53,000				
Bal. 187,000				

The proceeds from the sale of the equipment provided cash of \$4,000. In addition, the loss on the sale of the equipment has reduced net income but did not affect cash. Therefore, the company adds back to net income the amount of the loss, in order to accurately report cash provided by operating activities.

Satellite reported depreciation on the equipment at \$11,500 and recorded it on the worksheet as follows.

		(12)		
			Operating—Depreciation Expense—Equipment	11,500
			Accumulated Depreciation—Equipment	11,500

The company adds depreciation expense back to net income because that expense reduced income but did not affect cash.

Finally, the company made a major repair to the equipment. It charged this expenditure, in the amount of \$11,000, to Accumulated Depreciation—Equipment. This expenditure required cash, and so Satellite makes the following worksheet entry.

		(13)		
			Accumulated Depreciation—Equipment	11,000
			Investing—Major Repairs of Equipment	11,000

After adjusting for the foregoing items, Satellite has reconciled the balances in the Equipment and related Accumulated Depreciation—Equipment accounts.

Building Depreciation and Amortization of Trademarks

Depreciation expense on the buildings of \$3,100 and amortization of trademarks of \$2,400 are both expenses in the income statement that reduced net income but did not require cash outflows in the current period. Satellite makes the following worksheet entry.

(14)		
Operating—Depreciation Expense—Buildings	3,100	
Operating—Amortization of Trademarks	2,400	
Accumulated Depreciation—Buildings		3,100
Trademarks		2,400

Other Noncash Charges or Credits

Analysis of the remaining accounts indicates that changes in the Accounts Payable, Accrued Liabilities, Income Taxes Payable, Premium on Bonds Payable, and Deferred Tax Liability balances resulted from charges or credits to net income that did not affect cash. The company should individually analyze each of these items and enter them in the worksheet. The following compound entry summarizes these noncash, income-related items.

(15)		
Income Taxes Payable	13,000	
Premium on Bonds Payable	1,000	
Operating—Increase in Accounts Payable	1,000	
Operating—Increase in Accrued Liabilities	4,000	
Operating—Increase in Deferred Tax Liability	3,000	
Operating—Decrease in Income Taxes Payable		13,000
Operating—Amortization of Bond Premium		1,000
Accounts Payable		1,000
Accrued Liabilities		4,000
Deferred Tax Liability		3,000

Common Stock and Related Accounts

Comparison of the Common Stock balances and the Paid-in Capital in Excess of Par—Common Stock balances shows that transactions during the year affected these accounts. First, Satellite issues a stock dividend of 2 percent to stockholders. As the discussion of worksheet entry (2) indicated, no cash was provided or used by the stock dividend transaction. In addition to the shares issued via the stock dividend, Satellite sold shares of common stock at \$16 per share. The company records this transaction as follows.

(16)		
Financing—Sale of Common Stock	144,000	
Common Stock		9,000
Paid-in Capital in Excess of Par—Common Stock	135,000	

Common Stock	
	Bal. 50,000
	(2) 1,000
	(16) 9,000
	Bal. 60,000

Also, the company purchased shares of its common stock in the amount of \$17,000. It records this transaction on the worksheet as follows.

(17)		
Treasury Stock	17,000	
Financing—Purchase of Treasury Stock		17,000

Paid-in Capital in Excess of Par—Common Stock	
	Bal. 38,000
	(2) 14,000
	(16) 135,000
	Bal. 187,000

Final Reconciling Entry

The final entry to reconcile the change in cash and to balance the worksheet is shown below. The \$7,000 amount is the difference between the beginning and ending cash balance.

(18)		
Decrease in Cash	7,000	
Cash		7,000

Once the company has determined that the differences between the beginning and ending balances per the worksheet columns have been accounted for, it can total the

reconciling transactions columns, and they should balance. Satellite can prepare the statement of cash flows entirely from the items and amounts that appear at the bottom of the worksheet under "Statement of Cash Flows Effects," as shown in Illustration 23-40.

ILLUSTRATION 23-40

Completed Worksheet for Preparation of Statement of Cash Flows, Satellite Corporation

SATELLITE CORPORATION

Major repairs of equipment			(13) 11,000			
Financing activities						
Payment of cash dividend			(3) 6,000			
Issuance of common stock		(16) 144,000				
Purchase of treasury stock			(17) 17,000			
Totals			697,500	704,500		
Decrease in cash		(18) 7,000				
Totals			\$704,500	\$704,500		

Preparation of Final Statement

Illustration 23-41 presents a formal statement of cash flows prepared from the data compiled in the lower portion of the worksheet.

SATELLITE CORPORATION STATEMENT OF CASH FLOWS FOR THE YEAR ENDED DECEMBER 31, 2017		
Cash flows from operating activities		
Net income		\$117,000
Adjustments to reconcile net income to net cash used by operating activities:		
Depreciation expense	\$ 14,600	
Amortization of trademarks	2,400	
Amortization of bond premium	(1,000)	
Equity in earnings of Porter Co.	(3,500)	
Gain on condemnation of land	(8,000)	
Loss on sale of equipment	1,500	
Increase in deferred tax liability	3,000	
Increase in accounts receivable (net)	(53,000)	
Increase in inventory	(152,000)	
Decrease in prepaid expenses	500	
Increase in accounts payable	1,000	
Increase in accrued liabilities	4,000	
Decrease in income taxes payable	(13,000)	(203,500)
Net cash used by operating activities		(86,500)
Cash flows from investing activities		
Proceeds from condemnation of land	18,500	
Purchase of equipment	(53,000)	
Sale of equipment	4,000	
Major repairs of equipment	(11,000)	
Net cash used by investing activities		(41,500)
Cash flows from financing activities		
Payment of cash dividend	(6,000)	
Issuance of common stock	144,000	
Purchase of treasury stock	(17,000)	
Net cash provided by financing activities		121,000
Net decrease in cash		(7,000)
Cash, January 1, 2017		66,000
Cash, December 31, 2017		\$ 59,000
Supplemental Disclosures of Cash Flow Information:		
Cash paid during the year for:		
Interest (net of amount capitalized)		\$ 9,000
Income taxes		\$ 47,000
Supplemental Schedule of Noncash Investing and Financing Activities:		
Purchase of land for \$60,000 in exchange for a \$60,000 long-term note.

statement of cash flows, 1332

LEARNING OBJECTIVES REVIEW

1 Describe the usefulness and format of the statement of cash flows. The primary purpose of the statement of cash flows is to provide information about cash receipts and cash payments of an entity during a period. A secondary objective is to report the entity's operating, investing, and financing activities during the period.

Companies classify cash flows as follows. (1) **Operating activities**—transactions that result in the revenues, expenses, gains, and losses that determine net income. (2) **Investing activities**—lending money and collecting on those loans, and acquiring and disposing of investments, plant assets, and intangible assets. (3) **Financing activities**—obtaining cash from creditors and repaying loans, issuing and reacquiring capital stock, and paying cash dividends.

2 Prepare a statement of cash flows. (1) *Determine the change in cash.* This is the difference between the beginning and the ending cash balance shown on the comparative balance sheets. (2) *Determine the net cash flow from operating activities.* This procedure is complex; it involves analyzing not only the current year's income statement but also the comparative balance sheets and the selected transaction data. (3) *Determine cash flows from investing and financing activities.* Analyze all other changes in the balance sheet accounts to determine the effects on cash.

Companies must adjust net income on an accrual basis to determine net cash flow from operating activities because some expenses and losses do not cause cash outflows, and some revenues and gains do not provide cash inflows. Once a company has computed the net cash flow from operating activities, the next step is to determine whether any other changes in balance sheet accounts caused an increase or decrease in cash. Net cash flows from investing and financing activities can be determined primarily by examining the changes in noncurrent balance sheet accounts.

The information to prepare the statement usually comes from three sources. (1) *Comparative balance sheets:* Information in these statements indicates the amount of the changes in assets, liabilities, and equities during the period. (2) *Current income statement:* Information in this statement is used in determining the cash provided by operations during the period. (3) *Selected transaction data:* These data from the general ledger provide additional detailed information needed to determine how cash was provided or used during the period.

3 Contrast the direct and indirect methods of calculating net cash flow from operating activities. Under the direct approach, companies calculate the major classes of operating cash receipts and cash disbursements. Companies summarize the computations in a schedule of changes from the accrual- to the cash-basis income statement. Presentation of the direct approach of reporting net cash flow from operating activities takes the form of a condensed cash-basis income statement. The indirect method adds back to net income the noncash expenses and losses and subtracts the noncash revenues and gains.

4 Discuss special problems in preparing a statement of cash flows. These special problems are (1) adjustments to income (depreciation and amortization, postretirement benefit costs, change in deferred income taxes, equity method of accounting, losses and gains, stock options, unusual and infrequent items); (2) accounts receivable (net); (3) other working capital changes; (4) net losses; and (5) significant noncash transactions.

5 Explain the use of a worksheet in preparing a statement of cash flows. When numerous adjustments are necessary or other complicating factors are present, companies often use a worksheet to assemble and classify the data that will appear on the statement of cash flows. The worksheet is merely a device that aids in the preparation of the statement. Its use is optional.

ENHANCED REVIEW AND PRACTICE

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

PRACTICE PROBLEM

Data presented below are from the records of Antonio Brasileiro Company.

	December 31, 2017	December 31, 2016
Cash	\$ 15,000	\$ 8,000
Current assets other than cash	85,000	60,000
Long-term investments	10,000	53,000
Plant assets	335,000	215,000
	\$445,000	\$336,000
Accumulated depreciation	\$ 20,000	\$ 40,000
Current liabilities	40,000	22,000
Bonds payable	75,000	–0–
Common stock	254,000	254,000
Retained earnings	56,000	20,000
	\$445,000	\$336,000

Additional information:

1. In 2017, the company sold for \$34,000 available-for-sale debt investments carried at a cost of \$43,000 on December 31, 2017. No unrealized gains or losses were recorded on this investment in 2017.
2. In 2017, the company sold for \$8,000 plant assets that cost \$50,000 and were 80% depreciated. The loss was incorrectly charged directly to Retained Earnings.
3. Net income as reported on the income statement for the year was \$48,000.
4. The company paid dividends totaling \$10,000.
5. Depreciation charged for the year was \$20,000.

Instructions

Prepare a statement of cash flows for the year 2017 using the indirect method.

SOLUTION

ANTONIO BRASILEIRO COMPANY
STATEMENT OF CASH FLOWS
FOR THE YEAR ENDED DECEMBER 31, 2017
INDIRECT METHOD

Cash flows from operating activities		
Net income (\$48,000 – \$2,000)		\$ 46,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 20,000	
Loss on sale of investments	9,000	
Loss on sale of plant assets	2,000	
Increase in current assets other than cash	(25,000)	
Increase in current liabilities	18,000	<u>24,000</u>
Net cash provided by operating activities		70,000
Cash flows from investing activities		
Sale of plant assets	8,000	
Sale of investments	34,000	
Purchase of plant assets*	(170,000)	
Net cash used by investing activities		(128,000)
Cash flows from financing activities		
Issuance of bonds payable	75,000	
Payment of dividends	(10,000)	
Net cash provided by financing activities		<u>65,000</u>
Net increase in cash		7,000
Cash balance, January 1, 2017		<u>8,000</u>
Cash balance, December 31, 2017		<u>\$ 15,000</u>

*Supporting computation (purchase of plant assets):

Plant assets, December 31, 2017	\$335,000
Less: Plant assets, December 31, 2016	<u>215,000</u>
Net change	120,000
Plant assets sold	<u>50,000</u>
Plant assets purchased	<u>\$170,000</u>

QUESTIONS

1. What is the purpose of the statement of cash flows? What information does it provide?
2. Of what use is the statement of cash flows?
3. Differentiate between investing activities, financing activities, and operating activities.
4. What are the major sources of cash (inflows) in a statement of cash flows? What are the major uses (outflows) of cash?
5. Identify and explain the major steps involved in preparing the statement of cash flows.

1372 Chapter 23 Statement of Cash Flows

6. Identify the following items as (1) operating, (2) investing, or (3) financing activities: purchase of land, payment of dividends, cash sales, and purchase of treasury stock.
7. Unlike the other major financial statements, the statement of cash flows is not prepared from the adjusted trial balance. From what sources does the information to prepare this statement come, and what information does each source provide?
8. Why is it necessary to convert accrual-based net income to a cash basis when preparing a statement of cash flows?
9. Differentiate between the direct method and the indirect method by discussing each method.
10. Broussard Company reported net income of \$3.5 million in 2017. Depreciation for the year was \$520,000, accounts receivable increased \$500,000, and accounts payable increased \$300,000. Compute net cash flow from operating activities using the indirect method.
11. Collinsworth Co. reported sales on an accrual basis of \$100,000. If accounts receivable increased \$30,000 and the allowance for doubtful accounts increased \$9,000 after a write-off of \$2,000, compute cash sales.
12. Your roommate is puzzled. During the last year, the company in which she is a stockholder reported a net loss of \$675,000, yet its cash increased \$321,000 during the same period of time. Explain to your roommate how this situation could occur.
13. The board of directors of Tirico Corp. declared cash dividends of \$260,000 during the current year. If dividends payable was \$85,000 at the beginning of the year and \$90,000 at the end of the year, how much cash was paid in dividends during the year?
14. Explain how the amount of cash payments to suppliers is computed under the direct method.
15. The net income for Fallon Company for 2017 was \$320,000. During 2017, depreciation on plant assets was \$124,000, amortization of patent was \$40,000, and the company incurred a loss on sale of plant assets of \$21,000. Compute net cash flow from operating activities.
16. Each of the following items must be considered in preparing a statement of cash flows for Blackwell Inc. for the year ended December 31, 2017. State where each item is to be shown in the statement, if at all.
 - (a) Plant assets that had cost \$18,000 6½ years before and were being depreciated on a straight-line basis over 10 years with no estimated scrap value were sold for \$4,000.
 - (b) During the year, 10,000 shares of common stock with a stated value of \$20 a share were issued for \$41 a share.
 - (c) Uncollectible accounts receivable in the amount of \$22,000 were written off against Allowance for Doubtful Accounts.
 - (d) The company sustained a net loss for the year of \$50,000. Depreciation amounted to \$22,000, and a gain of \$9,000 was realized on the sale of available-for-sale securities for \$38,000 cash.
17. Classify the following items as (1) operating, (2) investing, (3) financing, or (4) significant noncash investing and financing activities, using the direct method.
 - (a) Cash payments to employees.
 - (b) Redemption of bonds payable.
 - (c) Sale of building at book value.
 - (d) Cash payments to suppliers.
 - (e) Exchange of equipment for furniture.
 - (f) Issuance of preferred stock.
 - (g) Cash received from customers.
 - (h) Purchase of treasury stock.
 - (i) Issuance of bonds for land.
 - (j) Payment of dividends.
 - (k) Purchase of equipment.
 - (l) Cash payments for operating expenses.
18. Stan Conner and Mark Stein were discussing the presentation format of the statement of cash flows of Bombeck Co. At the bottom of Bombeck's statement of cash flows was a separate section entitled "Noncash investing and financing activities." Give three examples of significant noncash transactions that would be reported in this section.
19. During 2017, Simms Company redeemed \$2,000,000 of bonds payable for \$1,880,000 cash. Indicate how this transaction would be reported on a statement of cash flows, if at all.
20. What are some of the arguments in favor of using the indirect (reconciliation) method as opposed to the direct method for reporting a statement of cash flows?
21. Why is it desirable to use a worksheet when preparing a statement of cash flows? Is a worksheet required to prepare a statement of cash flows?

BRIEF EXERCISES

BE23-1 (LO1) Novak Corporation is preparing its 2017 statement of cash flows, using the indirect method. Presented below is a list of items that may affect the statement. Using the code below, indicate how each item will affect Novak's 2017 statement of cash flows.

Code Letter	Effect
A	Added to net income in the operating section
D	Deducted from net income in the operating section
R-I	Cash receipt in investing section
P-I	Cash payment in investing section
R-F	Cash receipt in financing section
P-F	Cash payment in financing section
N	Noncash investing and financing activity

Items

- | | |
|---|---|
| ___ (a) Purchase of land and building. | ___ (j) Increase in accounts payable. |
| ___ (b) Decrease in accounts receivable. | ___ (k) Decrease in accounts payable. |
| ___ (c) Issuance of stock. | ___ (l) Loan from bank by signing note. |
| ___ (d) Depreciation expense. | ___ (m) Purchase of equipment using a note. |
| ___ (e) Sale of land at book value. | ___ (n) Increase in inventory. |
| ___ (f) Sale of land at a gain. | ___ (o) Issuance of bonds. |
| ___ (g) Payment of dividends. | ___ (p) Redemption of bonds payable. |
| ___ (h) Increase in accounts receivable. | ___ (q) Sale of equipment at a loss. |
| ___ (i) Purchase of available-for-sale debt investment. | ___ (r) Purchase of treasury stock. |

BE23-2 (L02) Wainwright Corporation had the following activities in 2017.

- | | |
|---|---|
| 1. Sale of land \$180,000. | 4. Purchase of equipment \$415,000. |
| 2. Purchase of inventory \$845,000. | 5. Issuance of common stock \$320,000. |
| 3. Purchase of treasury stock \$72,000. | 6. Purchase of available-for-sale debt securities \$59,000. |

Compute the amount Wainwright should report as net cash provided (used) by investing activities in its 2017 statement of cash flows.

BE23-3 (L02) Stansfield Corporation had the following activities in 2017.

- | | |
|---|---|
| 1. Payment of accounts payable \$770,000. | 4. Collection of note receivable \$100,000. |
| 2. Issuance of common stock \$250,000. | 5. Issuance of bonds payable \$510,000. |
| 3. Payment of dividends \$350,000. | 6. Purchase of treasury stock \$46,000. |

Compute the amount Stansfield should report as net cash provided (used) by financing activities in its 2017 statement of cash flows.

BE23-4 (L02,3) Bloom Corporation had the following 2017 income statement.

Sales revenue	\$200,000
Cost of goods sold	<u>120,000</u>
Gross profit	80,000
Operating expenses (includes depreciation of \$21,000)	<u>50,000</u>
Net income	<u>\$ 30,000</u>

The following accounts increased during 2017: Accounts Receivable \$12,000, Inventory \$11,000, and Accounts Payable \$13,000. Prepare the cash flows from operating activities section of Bloom's 2017 statement of cash flows using the direct method.

BE23-5 (L02,3) Use the information from BE23-4 for Bloom Corporation. Prepare the cash flows from operating activities section of Bloom's 2017 statement of cash flows using the indirect method.

BE23-6 (L03) At January 1, 2017, Eikenberry Inc. had accounts receivable of \$72,000. At December 31, 2017, accounts receivable is \$54,000. Sales revenue for 2017 total \$420,000. Compute Eikenberry's 2017 cash receipts from customers.

BE23-7 (L03) Moxley Corporation had January 1 and December 31 balances as follows.

	1/1/17	12/31/17
Inventory	\$95,000	\$113,000
Accounts payable	61,000	69,000

For 2017, cost of goods sold was \$500,000. Compute Moxley's 2017 cash payments to suppliers.

BE23-8 (L02) In 2017, Elbert Corporation had net cash provided by operating activities of \$531,000, net cash used by investing activities of \$963,000, and net cash provided by financing activities of \$585,000. At January 1, 2017, the cash balance was \$333,000. Compute December 31, 2017, cash.

BE23-9 (L02,3) Colbert Corporation had the following 2017 income statement.

Revenues	\$100,000
Expenses	<u>60,000</u>
	<u>\$ 40,000</u>

In 2017, Colbert had the following activity in selected accounts.

Accounts Receivable				Allowance for Doubtful Accounts			
1/1/17	20,000					1,200	1/1/17
Revenues	100,000	1,000	Write-offs	Write-offs	1,000	1,840	Bad debt expense
		90,000	Collections				
12/31/17	29,000					2,040	12/31/17

1374 Chapter 23 Statement of Cash Flows

Prepare Colbert's cash flows from operating activities section of the statement of cash flows using (a) the direct method and (b) the indirect method.

BE23-10 (L03) Hendrickson Corporation reported net income of \$50,000 in 2017. Depreciation expense was \$17,000. The following working capital accounts changed.

Accounts receivable	\$11,000 increase
Available-for-sale debt securities	16,000 increase
Inventory	7,400 increase
Nontrade note payable	15,000 decrease
Accounts payable	12,300 increase

Compute net cash provided by operating activities.

BE23-11 (L03) In 2017, Wild Corporation reported a net loss of \$70,000. Wild's only net income adjustments were depreciation expense \$81,000, and increase in accounts receivable \$8,100. Compute Wild's net cash provided (used) by operating activities.

BE23-12 (L04) In 2017, Leppard Inc. issued 1,000 shares of \$10 par value common stock for land worth \$40,000.

- Prepare Leppard's journal entry to record the transaction.
- Indicate the effect the transaction has on cash.
- Indicate how the transaction is reported on the statement of cash flows.

BE23-13 (L05) Indicate in general journal form how the items below would be entered in a worksheet for the preparation of the statement of cash flows.

- Net income is \$317,000.
- Cash dividends declared and paid totaled \$120,000.
- Equipment was purchased for \$114,000.
- Equipment that originally cost \$40,000 and had accumulated depreciation of \$32,000 was sold for \$10,000.

EXERCISES

E23-1 (L01) (Classification of Transactions) Red Hot Chili Peppers Co. had the following activity in its most recent year of operations.

- | | |
|--|--|
| (a) Purchase of equipment. | (g) Amortization of intangible assets. |
| (b) Redemption of bonds payable. | (h) Purchase of treasury stock. |
| (c) Sale of building. | (i) Issuance of bonds for land. |
| (d) Depreciation. | (j) Payment of dividends. |
| (e) Exchange of equipment for furniture. | (k) Increase in interest receivable on notes receivable. |
| (f) Issuance of common stock. | (l) Pension expense exceeds amount funded. |

Instructions

Classify the items as (1) operating—add to net income; (2) operating—deduct from net income; (3) investing; (4) financing; or (5) significant noncash investing and financing activities. Use the indirect method.

E23-2 (L01,2) (Statement Presentation of Transactions—Indirect Method) Each of the following items must be considered in preparing a statement of cash flows (indirect method) for Turbulent Indigo Inc. for the year ended December 31, 2017.

- Plant assets that had cost \$20,000 6 years before and were being depreciated on a straight-line basis over 10 years with no estimated scrap value were sold for \$5,300.
- During the year, 10,000 shares of common stock with a stated value of \$10 a share were issued for \$43 a share.
- Uncollectible accounts receivable in the amount of \$27,000 were written off against Allowance for Doubtful Accounts.
- The company sustained a net loss for the year of \$50,000. Depreciation amounted to \$22,000, and a gain of \$9,000 was realized on the sale of land for \$39,000 cash.
- A 3-month U.S. Treasury bill was purchased for \$100,000. The company uses a cash and cash equivalent basis for its cash flow statement.
- Patent amortization for the year was \$20,000.
- The company exchanged common stock for a 70% interest in Tabasco Co. for \$900,000.
- During the year, treasury stock costing \$47,000 was purchased.

Instructions

State where each item is to be shown in the statement of cash flows, if at all.

E23-3 (L02,3) EXCEL (Preparation of Operating Activities Section—Indirect Method, Periodic Inventory) The income statement of Vince Gill Company is shown below.

VINCE GILL COMPANY		
INCOME STATEMENT		
FOR THE YEAR ENDED DECEMBER 31, 2017		
Sales revenue		\$6,900,000
Cost of goods sold		
Beginning inventory	\$1,900,000	
Purchases	4,400,000	
Goods available for sale	6,300,000	
Ending inventory	1,600,000	
Cost of goods sold		4,700,000
Gross profit		2,200,000
Operating expenses		
Selling expenses	450,000	
Administrative expenses	700,000	
		1,150,000
Net income		\$1,050,000

Additional information:

1. Accounts receivable decreased \$360,000 during the year.
2. Prepaid expenses increased \$170,000 during the year.
3. Accounts payable to suppliers of merchandise decreased \$275,000 during the year.
4. Accrued expenses payable decreased \$100,000 during the year.
5. Administrative expenses include depreciation expense of \$60,000.

Instructions

Prepare the operating activities section of the statement of cash flows for the year ended December 31, 2017, for Vince Gill Company, using the indirect method.

E23-4 (L02,3) EXCEL (Preparation of Operating Activities Section—Direct Method) Data for the Vince Gill Company are presented in E23-3.

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

E23-5 (L02,3) (Preparation of Operating Activities Section—Direct Method) Krauss Company's income statement for the year ended December 31, 2017, contained the following condensed information.

Service revenue		\$840,000
Operating expenses (excluding depreciation)	\$624,000	
Depreciation expense	60,000	
Loss on sale of equipment	26,000	
		710,000
Income before income taxes		130,000
Income tax expense		40,000
Net income		\$ 90,000

Krauss's balance sheet contained the following comparative data at December 31.

	2017	2016
Accounts receivable	\$37,000	\$54,000
Accounts payable	41,000	31,000
Income taxes payable	4,000	8,500

(Accounts payable pertains to operating expenses.)

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

1376 Chapter 23 Statement of Cash Flows

E23-6 (L02,3) (Preparation of Operating Activities Section—Indirect Method) Data for Krauss Company are presented in E23-5.

Instructions

Prepare the operating activities section of the statement of cash flows using the indirect method.

E23-7 (L02,3) (Computation of Operating Activities—Direct Method) Presented below are two independent situations.

Situation A: Annie Lennox Co. reports revenues of \$200,000 and operating expenses of \$110,000 in its first year of operations, 2017. Accounts receivable and accounts payable at year-end were \$71,000 and \$29,000, respectively. Assume that the accounts payable related to operating expenses. (Ignore income taxes.)

Instructions

Using the direct method, compute net cash provided by operating activities.

Situation B: The income statement for Blues Traveler Company shows cost of goods sold \$310,000 and operating expenses (exclusive of depreciation) \$230,000. The comparative balance sheet for the year shows that inventory increased \$26,000, prepaid expenses decreased \$8,000, accounts payable (related to merchandise) decreased \$17,000, and accrued expenses payable increased \$11,000.

Instructions

Compute (a) cash payments to suppliers and (b) cash payments for operating expenses.

E23-8 (L02,3) (Schedule of Net Cash Flow from Operating Activities—Indirect Method) Ballard Co. reported \$145,000 of net income for 2017. The accountant, in preparing the statement of cash flows, noted the following items occurring during 2017 that might affect cash flows from operating activities.

- Ballard purchased 100 shares of treasury stock at a cost of \$20 per share. These shares were then resold at \$25 per share.
- Ballard sold 100 shares of IBM common at \$200 per share. The acquisition cost of these shares was \$145 per share. There were no unrealized gains or losses recorded on this investment in 2017.
- Ballard revised its estimate for bad debts. Before 2017, Ballard's bad debt expense was 1% of its net sales. In 2017, this percentage was increased to 2%. Net sales for 2017 were \$500,000, and net accounts receivable decreased by \$12,000 during 2017.
- Ballard issued 500 shares of its \$10 par common stock for a patent. The market price of the shares on the date of the transaction was \$23 per share.
- Depreciation expense is \$39,000.
- Ballard Co. holds 40% of the Nirvana Company's common stock as a long-term investment. Nirvana Company reported \$27,000 of net income for 2017.
- Nirvana Company paid a total of \$2,000 of cash dividends to all investees in 2017.
- Ballard declared a 10% stock dividend. One thousand shares of \$10 par common stock were distributed. The market price at date of issuance was \$20 per share.

Instructions

Prepare a schedule that shows the net cash flow from operating activities using the indirect method. Assume no items other than those listed above affected the computation of 2017 net cash flow from operating activities.

E23-9 (L02,3) (SCF—Direct Method) Los Lobos Corp. uses the direct method to prepare its statement of cash flows. Los Lobos's trial balances at December 31, 2017 and 2016, are as follows.

	December 31	
	2017	2016
Debits		
Cash	\$ 35,000	\$ 32,000
Accounts receivable	33,000	30,000
Inventory	31,000	47,000
Property, plant, and equipment	100,000	95,000
Unamortized bond discount	4,500	5,000
Cost of goods sold	250,000	380,000
Selling expenses	141,500	172,000
General and administrative expenses	137,000	151,300
Interest expense	4,300	2,600
Income tax expense	20,400	61,200
	\$756,700	\$976,100

	December 31	
	2017	2016
<u>Credits</u>		
Allowance for doubtful accounts	\$ 1,300	\$ 1,100
Accumulated depreciation—plant assets	16,500	15,000
Accounts payable	25,000	15,500
Income taxes payable	21,000	29,100
Deferred tax liability	5,300	4,600
8% callable bonds payable	45,000	20,000
Common stock	50,000	40,000
Paid-in capital in excess of par	9,100	7,500
Retained earnings	44,700	64,600
Sales revenue	538,800	778,700
	\$756,700	\$976,100

Additional information:

- Los Lobos purchased \$5,000 in equipment during 2017.
- Los Lobos allocated one-third of its depreciation expense to selling expenses and the remainder to general and administrative expenses.
- Bad debt expense for 2017 was \$5,000, and write-offs of uncollectible accounts totaled \$4,800.

Instructions

Determine what amounts Los Lobos should report in its statement of cash flows for the year ended December 31, 2017, for the following items.

- | | |
|------------------------------------|-------------------------------------|
| (a) Cash collected from customers. | (d) Cash paid for income taxes. |
| (b) Cash paid to suppliers. | (e) Cash paid for selling expenses. |
| (c) Cash paid for interest. | |

E23-10 (LO1,4) (Classification of Transactions) Following are selected balance sheet accounts of Allman Bros. Corp. at December 31, 2017 and 2016, and the increases or decreases in each account from 2016 to 2017. Also presented is selected income statement information for the year ended December 31, 2017, and additional information.

	2017	2016	Increase (Decrease)
Selected balance sheet accounts:			
<u>Assets</u>			
Accounts receivable	\$ 34,000	\$ 24,000	\$ 10,000
Property, plant, and equipment	277,000	247,000	30,000
Accumulated depreciation—plant assets	(178,000)	(167,000)	(11,000)
<u>Liabilities and stockholders' equity</u>			
Bonds payable	\$ 49,000	\$ 46,000	\$ 3,000
Dividends payable	8,000	5,000	3,000
Common stock, \$1 par	22,000	19,000	3,000
Additional paid-in capital	9,000	3,000	6,000
Retained earnings	104,000	91,000	13,000
Selected income statement information for the year ended December 31, 2017:			
Sales revenue	\$ 155,000		
Depreciation	33,000		
Gain on sale of equipment	14,500		
Net income	31,000		

Additional information:

- During 2017, equipment costing \$45,000 was sold for cash.
- Accounts receivable relate to sales of merchandise.
- During 2017, \$20,000 of bonds payable were issued in exchange for property, plant, and equipment. There was no amortization of bond discount or premium.

1378 Chapter 23 Statement of Cash Flows

Instructions

Determine the category (operating, investing, or financing) and the amount that should be reported in the statement of cash flows for the following items.

- (a) Payments for purchase of property, plant, and equipment.
- (b) Proceeds from the sale of equipment.
- (c) Cash dividends paid.
- (d) Redemption of bonds payable.

E23-11 (L02) (SCF—Indirect Method) Condensed financial data of Pat Metheny Company for 2017 and 2016 are presented below.

PAT METHENY COMPANY COMPARATIVE BALANCE SHEET AS OF DECEMBER 31, 2017 AND 2016		
	2017	2016
Cash	\$1,800	\$1,150
Receivables	1,750	1,300
Inventory	1,600	1,900
Plant assets	1,900	1,700
Accumulated depreciation	(1,200)	(1,170)
Long-term investments (held-to-maturity)	1,300	1,420
	<u>\$7,150</u>	<u>\$6,300</u>
Accounts payable	\$1,200	\$ 900
Accrued liabilities	200	250
Bonds payable	1,400	1,550
Common stock	1,900	1,700
Retained earnings	2,450	1,900
	<u>\$7,150</u>	<u>\$6,300</u>

PAT METHENY COMPANY INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2017		
Sales revenue	\$6,900	
Cost of goods sold	<u>4,700</u>	
Gross margin	2,200	
Selling and administrative expense	<u>930</u>	
Income from operations	1,270	
Other revenues and gains		
Gain on sale of investments	<u>80</u>	
Income before tax	1,350	
Income tax expense	<u>540</u>	
Net income	810	
Cash dividends	<u>260</u>	
Income retained in business	<u>\$ 550</u>	

Additional information:

During the year, \$70 of common stock was issued in exchange for plant assets. No plant assets were sold in 2017.

Instructions

Prepare a statement of cash flows using the indirect method.

E23-12 (L02) (SCF—Direct Method) Data for Pat Metheny Company are presented in E23-11.

Instructions

Prepare a statement of cash flows using the direct method. (Do not prepare a reconciliation schedule.)

E23-13 (L02,3) (SCF—Direct Method) Brecker Inc., a greeting card company, had the following statements prepared as of December 31, 2017.

BRECKER INC.
COMPARATIVE BALANCE SHEET
AS OF DECEMBER 31, 2017 AND 2016

	<u>12/31/17</u>	<u>12/31/16</u>
Cash	\$ 6,000	\$ 7,000
Accounts receivable	62,000	51,000
Short-term debt investments (available-for-sale)	35,000	18,000
Inventory	40,000	60,000
Prepaid rent	5,000	4,000
Equipment	154,000	130,000
Accumulated depreciation—equipment	(35,000)	(25,000)
Copyrights	46,000	50,000
Total assets	<u>\$313,000</u>	<u>\$295,000</u>
Accounts payable	\$ 46,000	\$ 40,000
Income taxes payable	4,000	6,000
Salaries and wages payable	8,000	4,000
Short-term loans payable	8,000	10,000
Long-term loans payable	60,000	69,000
Common stock, \$10 par	100,000	100,000
Contributed capital, common stock	30,000	30,000
Retained earnings	57,000	36,000
Total liabilities and stockholders' equity	<u>\$313,000</u>	<u>\$295,000</u>

BRECKER INC.
INCOME STATEMENT
FOR THE YEAR ENDING DECEMBER 31, 2017

Sales revenue		\$338,150
Cost of goods sold		<u>175,000</u>
Gross profit		163,150
Operating expenses		<u>120,000</u>
Operating income		43,150
Interest expense	\$11,400	
Gain on sale of equipment	<u>2,000</u>	<u>9,400</u>
Income before tax		33,750
Income tax expense		<u>6,750</u>
Net income		<u>\$ 27,000</u>

Additional information:

1. Dividends in the amount of \$6,000 were declared and paid during 2017.
2. Depreciation expense and amortization expense are included in operating expenses.
3. No unrealized gains or losses have occurred on the investments during the year.
4. Equipment that had a cost of \$20,000 and was 70% depreciated was sold during 2017.

Instructions

Prepare a statement of cash flows using the direct method. (Do not prepare a reconciliation schedule.)

E23-14 (L02) (SCF—Indirect Method) Data for Brecker Inc. are presented in E23-13.

Instructions

Prepare a statement of cash flows using the indirect method.

E23-15 (L02) (SCF—Indirect Method) The following data are taken from the records of Alee Company.

	<u>December 31, 2017</u>	<u>December 31, 2016</u>
Cash	\$ 15,000	\$ 8,000
Current assets other than cash	85,000	60,000
Long-term debt investments	10,000	53,000
Plant assets	335,000	215,000
	<u>\$445,000</u>	<u>\$336,000</u>

1380 Chapter 23 Statement of Cash Flows

	December 31, 2017	December 31, 2016
Accumulated depreciation	\$ 20,000	\$ 40,000
Current liabilities	40,000	22,000
Bonds payable	75,000	–0–
Common stock	254,000	254,000
Retained earnings	56,000	20,000
	<u>\$445,000</u>	<u>\$336,000</u>

Additional information:

- Held-to-maturity securities carried at a cost of \$43,000 on December 31, 2016, were sold in 2017 for \$34,000. The loss (not unusual) was incorrectly charged directly to Retained Earnings.
- Plant assets that cost \$50,000 and were 80% depreciated were sold during 2017 for \$8,000. The loss was incorrectly charged directly to Retained Earnings.
- Net income as reported on the income statement for the year was \$57,000.
- Dividends paid amounted to \$10,000.
- Depreciation charged for the year was \$20,000.

Instructions

Prepare a statement of cash flows for the year 2017 using the indirect method.

E23-16 (L01,2) (Cash Provided by Operating, Investing, and Financing Activities) The balance sheet data of Brown Company at the end of 2017 and 2016 follow.

	2017	2016
Cash	\$ 30,000	\$ 35,000
Accounts receivable (net)	55,000	45,000
Inventory	65,000	45,000
Prepaid expenses	15,000	25,000
Equipment	90,000	75,000
Accumulated depreciation—equipment	(18,000)	(8,000)
Land	70,000	40,000
	<u>\$307,000</u>	<u>\$257,000</u>
Accounts payable	\$ 65,000	\$ 52,000
Accrued expenses	15,000	18,000
Notes payable—bank, long-term	–0–	23,000
Bonds payable	30,000	–0–
Common stock, \$10 par	189,000	159,000
Retained earnings	8,000	5,000
	<u>\$307,000</u>	<u>\$257,000</u>

Land was acquired for \$30,000 in exchange for common stock, par \$30,000, during the year; all equipment purchased was for cash. Equipment costing \$10,000 was sold for \$3,000; book value of the equipment was \$6,000. Cash dividends of \$10,000 were declared and paid during the year.

Instructions

Compute net cash provided (used) by:

- Operating activities.
- Investing activities.
- Financing activities.

E23-17 (L02) (SCF—Indirect Method and Balance Sheet) Jobim Inc. had the following condensed balance sheet at the end of operations for 2016.

JOBIM INC. BALANCE SHEET DECEMBER 31, 2016			
Cash	\$ 8,500	Current liabilities	\$ 15,000
Current assets other than cash	29,000	Long-term notes payable	25,500
Equity investments	20,000	Bonds payable	25,000
Plant assets (net)	67,500	Common stock	75,000
Land	40,000	Retained earnings	24,500
	<u>\$165,000</u>		<u>\$165,000</u>

During 2017, the following occurred.

1. A tract of land was purchased for \$9,000.
2. Bonds payable in the amount of \$15,000 were redeemed at par.
3. An additional \$10,000 in common stock was issued at par.
4. Dividends totaling \$9,375 were paid to stockholders.
5. Net income was \$35,250 after allowing depreciation of \$13,500.
6. Land was purchased through the issuance of \$22,500 in bonds.
7. Jobim Inc. sold part of its investment portfolio for \$12,875. This transaction resulted in a gain of \$2,000 for the company. No unrealized gains or losses were recorded on these investments in 2017.
8. Both current assets (other than cash) and current liabilities remained at the same amount.

Instructions

- (a) Prepare a statement of cash flows for 2017 using the indirect method.
- (b) Prepare the condensed balance sheet for Jobim Inc. as it would appear at December 31, 2017.

E23-18 (L02,4) (Partial SCF—Indirect Method) The accounts below appear in the ledger of Anita Baker Company.

		Retained Earnings	Dr.	Cr.	Bal.
Jan. 1, 2017		Credit Balance			\$ 42,000
Aug. 15		Dividends (cash)	\$15,000		27,000
Dec. 31		Net Income for 2017		\$40,000	67,000
		Equipment	Dr.	Cr.	Bal.
Jan. 1, 2017		Debit Balance			\$140,000
Aug. 3		Purchase of Equipment	\$62,000		202,000
Sept. 10		Cost of Equipment Constructed	48,000		250,000
Nov. 15		Equipment Sold		\$56,000	194,000
		Accumulated Depreciation— Equipment	Dr.	Cr.	Bal.
Jan. 1, 2017		Credit Balance			\$ 84,000
Apr. 8		Major Repairs	\$21,000		63,000
Nov. 15		Accum. Depreciation on Equipment Sold	25,200		37,800
Dec. 31		Depreciation for 2017		\$16,800	54,600

Instructions

From the postings in the accounts above, indicate how the information is reported on a statement of cash flows by preparing a partial statement of cash flows using the indirect method. The loss on sale of equipment (November 15) was \$5,800.

E23-19 (L05) (Worksheet Analysis of Selected Accounts) Data for Anita Baker Company are presented in E23-18.

Instructions

Prepare entries in journal form for all adjustments that should be made on a worksheet for a statement of cash flows.

E23-20 (L05) (Worksheet Analysis of Selected Transactions) The transactions below took place during the year 2017.

1. Convertible bonds payable with a par value of \$300,000 were exchanged for unissued common stock with a par value of \$300,000. The market price of both types of securities was par.
2. The net income for the year was \$410,000.
3. Depreciation expense for the building was \$90,000.
4. Some old office equipment was traded in on the purchase of some dissimilar office equipment, and the following entry was made.

Equipment	50,000		
Accum. Depreciation—Equipment	30,000		
Equipment		40,000	
Cash		34,000	
Gain on Disposal of Plant Assets		6,000	

The Gain on Disposal of Plant Assets was included in income before income taxes.

5. Dividends in the amount of \$123,000 were declared. They are payable in January of next year.

1382 Chapter 23 Statement of Cash Flows

Instructions

Show by journal entries the adjustments that would be made on a worksheet for a statement of cash flows.

E23-21 (L05) (Worksheet Preparation) Below is the comparative balance sheet for Stevie Wonder Corporation.

	Dec. 31, 2017	Dec. 31, 2016
Cash	\$ 16,500	\$ 21,000
Short-term investments	25,000	19,000
Accounts receivable	43,000	45,000
Allowance for doubtful accounts	(1,800)	(2,000)
Prepaid expenses	4,200	2,500
Inventory	81,500	65,000
Land	50,000	50,000
Buildings	125,000	73,500
Accumulated depreciation—buildings	(30,000)	(23,000)
Equipment	53,000	46,000
Accumulated depreciation—equipment	(19,000)	(15,500)
Delivery equipment	39,000	39,000
Accumulated depreciation—delivery equipment	(22,000)	(20,500)
Patents	15,000	—
	<u>\$379,400</u>	<u>\$300,000</u>
	Dec. 31, 2017	Dec. 31, 2016
Accounts payable	\$ 26,000	\$ 16,000
Short-term notes payable (trade)	4,000	6,000
Accrued payables	3,000	4,600
Mortgage payable	73,000	53,400
Bonds payable	50,000	62,500
Common stock	140,000	102,000
Paid-in capital in excess of par	10,000	4,000
Retained earnings	73,400	51,500
	<u>\$379,400</u>	<u>\$300,000</u>

Dividends in the amount of \$15,000 were declared and paid in 2017.

Instructions

From this information, prepare a worksheet for a statement of cash flows. Make reasonable assumptions as appropriate. The short-term investments are considered available-for-sale and no unrealized gains or losses have occurred on these securities.

PROBLEMS

P23-1 (L02,4) (SCF—Indirect Method) The following are Sullivan Corp.'s comparative balance sheet accounts at December 31, 2017 and 2016, with a column showing the increase (decrease) from 2016 to 2017.

COMPARATIVE BALANCE SHEETS			
	<u>2017</u>	<u>2016</u>	<u>Increase (Decrease)</u>
Cash	\$ 815,000	\$ 700,000	\$115,000
Accounts receivable	1,128,000	1,168,000	(40,000)
Inventory	1,850,000	1,715,000	135,000
Property, plant, and equipment	3,307,000	2,967,000	340,000
Accumulated depreciation	(1,165,000)	(1,040,000)	(125,000)
Investment in Myers Co.	310,000	275,000	35,000
Loan receivable	250,000	—	250,000
Total assets	<u>\$6,495,000</u>	<u>\$5,785,000</u>	<u>\$710,000</u>

	2017	2016	Increase (Decrease)
Accounts payable	\$1,015,000	\$ 955,000	\$ 60,000
Income taxes payable	30,000	50,000	(20,000)
Dividends payable	80,000	100,000	(20,000)
Lease liability	400,000	—	400,000
Common stock, \$1 par	500,000	500,000	—
Paid-in capital in excess of par—common stock	1,500,000	1,500,000	—
Retained earnings	2,970,000	2,680,000	290,000
Total liabilities and stockholders' equity	<u>\$6,495,000</u>	<u>\$5,785,000</u>	<u>\$710,000</u>

Additional information:

- On December 31, 2016, Sullivan acquired 25% of Myers Co.'s common stock for \$275,000. On that date, the carrying value of Myers's assets and liabilities, which approximated their fair values, was \$1,100,000. Myers reported income of \$140,000 for the year ended December 31, 2017. No dividend was paid on Myers's common stock during the year.
- During 2017, Sullivan loaned \$300,000 to TLC Co., an unrelated company. TLC made the first semiannual principal repayment of \$50,000, plus interest at 10%, on December 31, 2017.
- On January 2, 2017, Sullivan sold equipment costing \$60,000, with a carrying amount of \$38,000, for \$40,000 cash.
- On December 31, 2017, Sullivan entered into a capital lease for an office building. The present value of the annual rental payments is \$400,000, which equals the fair value of the building. Sullivan made the first rental payment of \$60,000 when due on January 2, 2018.
- Net income for 2017 was \$370,000.
- Sullivan declared and paid the following cash dividends for 2017 and 2016.

	2017	2016
Declared	December 15, 2017	December 15, 2016
Paid	February 28, 2018	February 28, 2017
Amount	\$80,000	\$100,000

Instructions

Prepare a statement of cash flows for Sullivan Corp. for the year ended December 31, 2017, using the indirect method.

(AICPA adapted)

P23-2 (L02,4) EXCEL GROUPWORK (SCF—Indirect Method) The comparative balance sheets for Hinckley Corporation show the following information.

	December 31	
	2017	2016
Cash	\$ 33,500	\$13,000
Accounts receivable	12,250	10,000
Inventory	12,000	9,000
Available-for-sale debt investments	—	3,000
Buildings	—	29,750
Equipment	45,000	20,000
Patents	5,000	6,250
	<u>\$107,750</u>	<u>\$91,000</u>
Allowance for doubtful accounts	\$ 3,000	\$ 4,500
Accumulated depreciation—equipment	2,000	4,500
Accumulated depreciation—building	—	6,000
Accounts payable	5,000	3,000
Dividends payable	—	5,000
Notes payable, short-term (nontrade)	3,000	4,000
Long-term notes payable	31,000	25,000
Common stock	43,000	33,000
Retained earnings	20,750	6,000
	<u>\$107,750</u>	<u>\$91,000</u>

Additional data related to 2017 are as follows.

- Equipment that had cost \$11,000 and was 40% depreciated at time of disposal was sold for \$2,500.
- \$10,000 of the long-term note payable was paid by issuing common stock.

1384 Chapter 23 Statement of Cash Flows

3. Cash dividends paid were \$5,000.
4. On January 1, 2017, the building was completely destroyed by a flood. Insurance proceeds on the building were \$30,000 (net of \$2,000 taxes).
5. Investments (available-for-sale) were sold at \$1,700 above their cost. The company has made similar sales and investments in the past.
6. Cash was paid for the acquisition of equipment.
7. A long-term note for \$16,000 was issued for the acquisition of equipment.
8. Interest of \$2,000 and income taxes of \$6,500 were paid in cash.

Instructions

Prepare a statement of cash flows using the indirect method. Flood damage is unusual and infrequent in that part of the country.

P23-3 (LO2) EXCEL (SCF—Direct Method) Mortonson Company has not yet prepared a formal statement of cash flows for the 2017 fiscal year. Comparative balance sheets as of December 31, 2016 and 2017, and a statement of income and retained earnings for the year ended December 31, 2017, are presented as follows.

MORTONSON COMPANY

Patents (less amortization)	105	130
Total long-term assets	965	680
Total assets	\$2,808	\$1,890

MORTONSON COMPANY
COMPARATIVE BALANCE SHEETS
AS OF DECEMBER 31
(\$000 OMITTED)
(CONTINUED)

Liabilities and Stockholders' Equity		
Current liabilities		
Accounts payable	\$ 420	\$ 330
Income taxes payable	40	30
Notes payable	320	320
Total current liabilities	780	680
Long-term notes payable—due 2019	200	200
Total liabilities	980	880
Stockholders' equity		
Common stock	1,300	700
Retained earnings	528	310
Total stockholders' equity	1,828	1,010
Total liabilities and stockholders' equity	\$2,808	\$1,890

Instructions

Prepare a statement of cash flows using the direct method. Changes in accounts receivable and accounts payable relate to sales and cost of goods sold. Do not prepare a reconciliation schedule.

(CMA adapted)

P23-4 (L02,4) (SCF—Direct Method) Michaels Company had available at the end of 2017 the following information.

MICHAELS COMPANY
COMPARATIVE BALANCE SHEETS
AS OF DECEMBER 31, 2017 AND 2016

	2017	2016
Cash	\$ 10,000	\$ 4,000
Accounts receivable	20,500	12,950
Short-term investments	22,000	30,000
Inventory	42,000	35,000
Prepaid rent	3,000	12,000
Prepaid insurance	2,100	900
Supplies	1,000	750
Land	125,000	175,000
Buildings	350,000	350,000
Accumulated depreciation—buildings	(105,000)	(87,500)
Equipment	525,000	400,000
Accumulated depreciation—equipment	(130,000)	(112,000)
Patents	45,000	50,000
Total assets	\$910,600	\$871,100
Accounts payable	\$ 22,000	\$ 32,000
Income taxes payable	5,000	4,000
Salaries and wages payable	5,000	3,000
Short-term notes payable	10,000	10,000
Long-term notes payable	60,000	70,000
Bonds payable	400,000	400,000
Premium on bonds payable	20,303	25,853
Common stock	240,000	220,000
Paid-in capital in excess of par—common stock	25,000	17,500
Retained earnings	123,297	88,747
Total liabilities and stockholders' equity	\$910,600	\$871,100

MICHAELS COMPANY
INCOME STATEMENT AND DIVIDEND INFORMATION
FOR THE YEAR ENDED DECEMBER 31, 2017

Sales revenue		\$1,160,000
Cost of goods sold		748,000
Gross margin		412,000
Operating expenses		
Selling expenses	\$ 79,200	
Administrative expenses	156,700	
Depreciation/Amortization expense	40,500	
Total operating expenses		276,400
Income from operations		135,600
Other revenues/expenses		
Gain on sale of land	8,000	
Gain on sale of short-term investment	4,000	
Dividend revenue	2,400	
Interest expense	(51,750)	(37,350)
Income before taxes		98,250
Income tax expense		39,400
Net income		58,850
Dividends to common stockholders		(24,300)
To retained earnings		\$ 34,550

Instructions

Prepare a statement of cash flows for Michaels Company using the direct method accompanied by a reconciliation schedule. Assume the short-term investments are debt securities, classified as available-for-sale.

P23-5 (LO2,4) (SCF—Indirect Method) You have completed the field work in connection with your audit of Alexander Corporation for the year ended December 31, 2017. The balance sheet accounts at the beginning and end of the year are shown below.

	Dec. 31, 2017	Dec. 31, 2016	Increase or (Decrease)
Cash	\$ 277,900	\$ 298,000	(\$20,100)
Accounts receivable	469,424	353,000	116,424
Inventory	741,700	610,000	131,700
Prepaid expenses	12,000	8,000	4,000
Investment in subsidiary	110,500	0-	110,500
Cash surrender value of life insurance	2,304	1,800	504
Machinery	207,000	190,000	17,000
Buildings	535,200	407,900	127,300
Land	52,500	52,500	0-
Patents	69,000	64,000	5,000
Copyrights	40,000	50,000	(10,000)
Bond discount and issue costs	4,502	0-	4,502
	\$2,522,030	\$2,035,200	\$486,830
Income taxes payable	\$ 90,250	\$ 79,600	\$ 10,650
Accounts payable	299,280	280,000	19,280
Dividends payable	70,000	0-	70,000
Bonds payable—8%	125,000	0-	125,000
Bonds payable—12%	0-	100,000	(100,000)
Allowance for doubtful accounts	35,300	40,000	(4,700)
Accumulated depreciation—buildings	424,000	400,000	24,000
Accumulated depreciation—machinery	173,000	130,000	43,000
Premium on bonds payable	0-	2,400	(2,400)
Common stock—no par	1,176,200	1,453,200	(277,000)
Paid-in capital in excess of par—common stock	109,000	0-	109,000
Retained earnings—unappropriated	20,000	(450,000)	470,000
	\$2,522,030	\$2,035,200	\$486,830

STATEMENT OF RETAINED EARNINGS FOR THE YEAR ENDED DECEMBER 31, 2017			
January	1, 2017	Balance (deficit)	\$(450,000)
March	31, 2017	Net income for first quarter of 2017	25,000
April	1, 2017	Transfer from paid-in capital	425,000
		Balance	<u>-0-</u>
December	31, 2017	Net income for last three quarters of 2017	90,000
		Dividend declared—payable January 21, 2018	(70,000)
		Balance	<u>\$ 20,000</u>

Your working papers from the audit contain the following information:

- On April 1, 2017, the existing deficit was written off against paid-in capital created by reducing the stated value of the no-par stock.
- On November 1, 2017, 29,600 shares of no-par stock were sold for \$257,000. The board of directors voted to regard \$5 per share as stated capital.
- A patent was purchased for \$15,000.
- During the year, machinery that had a cost basis of \$16,400 and on which there was accumulated depreciation of \$5,200 was sold for \$9,000. No other plant assets were sold during the year.
- The 12%, 20-year bonds were dated and issued on January 2, 2005. Interest was payable on June 30 and December 31. They were sold originally at 106. These bonds were redeemed at 100.9 plus accrued interest on March 31, 2017.
- The 8%, 40-year bonds were dated January 1, 2017, and were sold on March 31 at 97 plus accrued interest. Interest is payable semiannually on June 30 and December 31. Expense of issuance was \$839.
- Alexander Corporation acquired 70% control in Crimson Company on January 2, 2017, for \$100,000. The income statement of Crimson Company for 2017 shows a net income of \$15,000.
- Major repairs to buildings of \$7,200 were charged to Accumulated Depreciation—Buildings.
- Interest paid in 2017 was \$10,500 and income taxes paid were \$34,000.

Instructions

From the information given, prepare a statement of cash flows using the indirect method. A worksheet is not necessary, but the principal computations should be supported by schedules or general ledger accounts. The company uses straight-line amortization for bond interest.

P23-6 (L02,3,4) (SCF—Indirect Method, and Net Cash Flow from Operating Activities, Direct Method) Comparative balance sheet accounts of Marcus Inc. are presented below.

MARCUS INC. COMPARATIVE BALANCE SHEET ACCOUNTS AS OF DECEMBER 31, 2017 AND 2016		
Debit Accounts	December 31	
	2017	2016
Cash	\$ 42,000	\$ 33,750
Accounts Receivable	70,500	60,000
Inventory	30,000	24,000
Equity investments	22,250	38,500
Machinery	30,000	18,750
Buildings	67,500	56,250
Land	7,500	7,500
	<u>\$269,750</u>	<u>\$238,750</u>
Credit Accounts		
Allowance for Doubtful Accounts	\$ 2,250	\$ 1,500
Accumulated Depreciation—Machinery	5,625	2,250
Accumulated Depreciation—Buildings	13,500	9,000
Accounts Payable	35,000	24,750
Accrued Payables	3,375	2,625
Long-Term Notes Payable	21,000	31,000
Common Stock, no-par	150,000	125,000
Retained Earnings	39,000	42,625
	<u>\$269,750</u>	<u>\$238,750</u>

1388 Chapter 23 Statement of Cash Flows

Additional data (ignoring taxes):

1. Net income for the year was \$42,500.
2. Cash dividends declared and paid during the year were \$21,125.
3. A 20% stock dividend was declared during the year. \$25,000 of retained earnings was capitalized.
4. Equity investments (level of ownership is less than 20%) that cost \$25,000 were sold during the year for \$28,750. No unrealized gains and losses were recorded on these investments in 2017.
5. Machinery that cost \$3,750, on which \$750 of depreciation had accumulated, was sold for \$2,200.

Marcus's 2017 income statement follows (ignoring taxes).

Sales revenue		\$540,000
Less: Cost of goods sold		<u>380,000</u>
Gross margin		160,000
Less: Operating expenses (includes \$8,625 depreciation and \$5,400 bad debts)		<u>120,450</u>
Income from operations		39,550
Other: Gain on sale of investments	\$3,750	
Loss on sale of machinery	<u>(800)</u>	<u>2,950</u>
Net income		<u>\$ 42,500</u>

Instructions

- (a) Compute net cash flow from operating activities using the direct method.
- (b) Prepare a statement of cash flows using the indirect method.

P23-7 (L02,3,4) GROUPWORK (SCF—Direct and Indirect Methods from Comparative Financial Statements) Chapman Company, a major retailer of bicycles and accessories, operates several stores and is a publicly traded company. The comparative balance sheet and income statement for Chapman as of May 31, 2017, are as follows. The company is preparing its statement of cash flows.

CHAPMAN COMPANY COMPARATIVE BALANCE SHEET AS OF MAY 31		
	2017	2016
Current assets		
Cash	\$ 28,250	\$ 20,000
Accounts receivable	75,000	58,000
Inventory	220,000	250,000
Prepaid expenses	9,000	7,000
Total current assets	<u>332,250</u>	<u>335,000</u>
Plant assets		
Plant assets	600,000	502,000
Less: Accumulated depreciation—plant assets	<u>150,000</u>	<u>125,000</u>
Net plant assets	<u>450,000</u>	<u>377,000</u>
Total assets	<u>\$782,250</u>	<u>\$712,000</u>
Current liabilities		
Accounts payable	\$123,000	\$115,000
Salaries and wages payable	47,250	72,000
Interest payable	27,000	25,000
Total current liabilities	<u>197,250</u>	<u>212,000</u>
Long-term debt		
Bonds payable	<u>70,000</u>	<u>100,000</u>
Total liabilities	<u>267,250</u>	<u>312,000</u>
Stockholders' equity		
Common stock, \$10 par	370,000	280,000
Retained earnings	<u>145,000</u>	<u>120,000</u>
Total stockholders' equity	<u>515,000</u>	<u>400,000</u>
Total liabilities and stockholders' equity	<u>\$782,250</u>	<u>\$712,000</u>

CHAPMAN COMPANY
INCOME STATEMENT
FOR THE YEAR ENDED MAY 31, 2017

Sales revenue	\$1,255,250
Cost of goods sold	722,000
Gross profit	533,250
Expenses	
Salaries and wages expense	252,100
Interest expense	75,000
Depreciation expense	25,000
Other expenses	8,150
Total expenses	360,250
Operating income	173,000
Income tax expense	43,000
Net income	\$ 130,000

The following is additional information concerning Chapman's transactions during the year ended May 31, 2017.

1. All sales during the year were made on account.
2. All merchandise was purchased on account, comprising the total accounts payable account.
3. Plant assets costing \$98,000 were purchased by paying \$28,000 in cash and issuing 7,000 shares of stock.
4. The "other expenses" are related to prepaid items.
5. All income taxes incurred during the year were paid during the year.
6. In order to supplement its cash, Chapman issued 2,000 shares of common stock at par value.
7. Cash dividends of \$105,000 were declared and paid at the end of the fiscal year.

Instructions

- (a) Compare and contrast the direct method and the indirect method for reporting cash flows from operating activities.
- (b) Prepare a statement of cash flows for Chapman Company for the year ended May 31, 2017, using the direct method. Be sure to support the statement with appropriate calculations. (A reconciliation of net income to net cash provided is not required.)
- (c) Using the indirect method, calculate only the net cash flow from operating activities for Chapman Company for the year ended May 31, 2017.

P23-8 (L02,4) (SCF—Direct and Indirect Methods) Comparative balance sheet accounts of Sharpe Company are presented below.

SHARPE COMPANY
COMPARATIVE BALANCE SHEET ACCOUNTS
AS OF DECEMBER 31

Debit Balances	2017	2016
Cash	\$ 70,000	\$ 51,000
Accounts Receivable	155,000	130,000
Inventory	75,000	61,000
Debt investments (available-for-sale)	55,000	85,000
Equipment	70,000	48,000
Buildings	145,000	145,000
Land	40,000	25,000
Totals	\$610,000	\$545,000
Credit Balances		
Allowance for Doubtful Accounts	\$ 10,000	\$ 8,000
Accumulated Depreciation—Equipment	21,000	14,000
Accumulated Depreciation—Buildings	37,000	28,000
Accounts Payable	66,000	60,000
Income Taxes Payable	12,000	10,000
Long-Term Notes Payable	62,000	70,000
Common Stock	310,000	260,000
Retained Earnings	92,000	95,000
Totals	\$610,000	\$545,000

1390 Chapter 23 Statement of Cash Flows

Additional data:

1. Equipment that cost \$10,000 and was 60% depreciated was sold in 2017.
2. Cash dividends were declared and paid during the year.
3. Common stock was issued in exchange for land.
4. Debt investments that cost \$35,000 were sold during the year.
5. There were no write-offs of uncollectible accounts during the year.

Sharpe's 2017 income statement is as follows.

Sales revenue		\$950,000
Less: Cost of goods sold		<u>600,000</u>
Gross profit		350,000
Less: Operating expenses (includes depreciation expense and bad debt expense)		<u>250,000</u>
Income from operations		100,000
Other revenues and expenses		
Gain on sale of investments	\$15,000	
Loss on sale of equipment	<u>(3,000)</u>	<u>12,000</u>
Income before taxes		112,000
Income taxes		<u>45,000</u>
Net income		<u>\$ 67,000</u>

Instructions

- (a) Compute net cash provided by operating activities under the direct method.
- (b) Prepare a statement of cash flows using the indirect method.

P23-9 (LO2,4) (Indirect SCF) Dingel Corporation has contracted with you to prepare a statement of cash flows. The controller has provided the following information.

	December 31	
	2017	2016
Cash	\$ 38,500	\$13,000
Accounts receivable	12,250	10,000
Inventory	12,000	10,000
Equity investments	–0–	3,000
Buildings	–0–	29,750
Equipment	40,000	20,000
Copyrights	5,000	5,250
Totals	<u>\$107,750</u>	<u>\$91,000</u>
Allowance for doubtful accounts	\$ 3,000	\$ 4,500
Accumulated depreciation—equipment	2,000	4,500
Accumulated depreciation—buildings	–0–	6,000
Accounts payable	5,000	4,000
Dividends payable	–0–	5,000
Notes payable, short-term (nontrade)	3,000	4,000
Long-term notes payable	36,000	25,000
Common stock	38,000	33,000
Retained earnings	<u>20,750</u>	<u>5,000</u>
	<u>\$107,750</u>	<u>\$91,000</u>

Additional data related to 2017 are as follows.

1. Equipment that had cost \$11,000 and was 30% depreciated at time of disposal was sold for \$2,500.
2. \$5,000 of the long-term note payable was paid by issuing common stock.
3. Cash dividends paid were \$5,000.
4. On January 1, 2017, the building was completely destroyed by a flood. Insurance proceeds on the building were \$33,000 (net of \$4,000 taxes).
5. Equity investments (ownership is less than 20% of total shares) were sold at \$1,500 above their cost. No unrealized gains or losses were recorded in 2017.
6. Cash and long-term note for \$16,000 were given for the acquisition of equipment.
7. Interest of \$2,000 and income taxes of \$5,000 were paid in cash.

Instructions

- (a) Use the indirect method to analyze the above information and prepare a statement of cash flows for Dingel.
- (b) What would you expect to observe in the operating, investing, and financing sections of a statement of cash flows of:
- (1) A severely financially troubled firm?
 - (2) A recently formed firm that is experiencing rapid growth?

CONCEPTS FOR ANALYSIS

CA23-1 WRITING (Analysis of Improper SCF) The following statement was prepared by Maloney Corporation's accountant.

MALONEY CORPORATION	
STATEMENT OF SOURCES AND APPLICATION OF CASH	
FOR THE YEAR ENDED SEPTEMBER 30, 2017	
Sources of cash	
Net income	\$111,000
Depreciation and depletion	70,000
Increase in long-term debt	179,000
Changes in current receivables and inventories, less current liabilities (excluding current maturities of long-term debt)	<u>14,000</u>
	<u>\$374,000</u>
Application of cash	
Cash dividends	\$ 60,000
Expenditure for property, plant, and equipment	214,000
Investments and other uses	20,000
Change in cash	<u>80,000</u>
	<u>\$374,000</u>

The following additional information relating to Maloney Corporation is available for the year ended September 30, 2017.

1. Salaries and wages expense attributable to stock option plans was \$25,000 for the year.
2. Expenditures for property, plant, and equipment \$250,000
 Proceeds from retirements of property, plant, and equipment 36,000
 Net expenditures \$214,000
3. A stock dividend of 10,000 shares of Maloney Corporation common stock was distributed to common stockholders on April 1, 2017, when the per share market price was \$7 and par value was \$1.
4. On July 1, 2017, when its market price was \$6 per share, 16,000 shares of Maloney Corporation common stock were issued in exchange for 4,000 shares of preferred stock.
5. Depreciation expense \$ 65,000
 Depletion expense 5,000
\$ 70,000
6. Increase in long-term debt \$620,000
 Less: Redemption of debt 441,000
 Net increase \$179,000

Instructions

- (a) In general, what are the objectives of a statement of the type shown above for Maloney Corporation? Explain.
- (b) Identify the weaknesses in the form and format of Maloney Corporation's statement of cash flows without reference to the additional information. (Assume adoption of the indirect method.)
- (c) For each of the six items of additional information for the statement of cash flows, indicate the preferable treatment and explain why the suggested treatment is preferable.

(AICPA adapted)

CA23-2 GROUPWORK (SCF Theory and Analysis of Improper SCF) Teresa Ramirez and Lenny Traylor are examining the following statement of cash flows for Pacific Clothing Store's first year of operations.

PACIFIC CLOTHING STORE	
STATEMENT OF CASH FLOWS	
FOR THE YEAR ENDED JANUARY 31, 2017	
Sources of cash	
From sales of merchandise	\$ 382,000
From sale of common stock	380,000
From sale of investment	120,000
From depreciation	80,000
From issuance of note for truck	30,000
From interest on investments	8,000
Total sources of cash	1,000,000
Uses of cash	
For purchase of fixtures and equipment	330,000
For merchandise purchased for resale	253,000
For operating expenses (including depreciation)	170,000
For purchase of investment	95,000
For purchase of truck by issuance of note	30,000
For purchase of treasury stock	10,000
For interest on note	3,000
Total uses of cash	891,000
Net increase in cash	\$ 109,000

Teresa claims that Pacific's statement of cash flows is an excellent portrayal of a superb first year, with cash increasing \$109,000. Lenny replies that it was not a superb first year—that the year was an operating failure, the statement was incorrectly presented, and \$109,000 is not the actual increase in cash.

Instructions

- (a) With whom do you agree, Teresa or Lenny? Explain your position.
- (b) Using the data provided, prepare a statement of cash flows in proper indirect method form. The only noncash items in income are depreciation and the gain from the sale of the investment (purchase and sale are related).

CA23-3 (SCF Theory and Analysis of Transactions) Ashley Company is a young and growing producer of electronic measuring instruments and technical equipment. You have been retained by Ashley to advise it in the preparation of a statement of cash flows using the indirect method. For the fiscal year ended October 31, 2017, you have obtained the following information concerning certain events and transactions of Ashley.

1. The amount of reported earnings for the fiscal year was \$700,000, which included a deduction for a loss of \$110,000 (see item 5 below).
2. Depreciation expense of \$315,000 was included in the income statement.
3. Uncollectible accounts receivable of \$40,000 were written off against the allowance for doubtful accounts. Also, \$51,000 of bad debt expense was included in determining income for the fiscal year, and the same amount was added to the allowance for doubtful accounts.
4. A gain of \$6,000 was realized on the sale of a machine. It originally cost \$75,000, of which \$30,000 was undepreciated on the date of sale.
5. On April 1, 2017, lightning caused an uninsured building loss of \$110,000 (\$180,000 loss, less reduction in income taxes of \$70,000). This loss was included in determining income as indicated in item 1 above.
6. On July 3, 2017, building and land were purchased for \$700,000. Ashley gave in payment \$75,000 cash, \$200,000 market price of its unissued common stock, and signed a \$425,000 mortgage note payable.
7. On August 3, 2017, \$800,000 face value of Ashley's 10% convertible debentures was converted into \$150,000 par value of its common stock. The bonds were originally issued at face value.

Instructions

Explain whether each of the seven numbered items above is a cash inflow or outflow, and explain how it should be disclosed in Ashley's statement of cash flows for the fiscal year ended October 31, 2017. If any item is neither an inflow nor an outflow of cash, explain why it is not, and indicate the disclosure, if any, that should be made of the item in Ashley's statement of cash flows for the fiscal year ended October 31, 2017.

CA23-4 GROUPWORK (Analysis of Transactions' Effect on SCF) Each of the following items must be considered in preparing a statement of cash flows for Cruz Fashions Inc. for the year ended December 31, 2017.

1. Fixed assets that had cost \$20,000 6½ years before and were being depreciated on a 10-year basis, with no estimated scrap value, were sold for \$4,750.

2. During the year, goodwill of \$15,000 was considered impaired and was completely written off to expense.
3. During the year, 500 shares of common stock with a stated value of \$25 a share were issued for \$32 a share.
4. The company sustained a net loss for the year of \$2,100. Depreciation amounted to \$2,000 and patent amortization was \$400.
5. Uncollectible accounts receivable in the amount of \$2,000 were written off against Allowance for Doubtful Accounts.
6. Investments (available-for-sale) that cost \$12,000 when purchased 4 years earlier were sold for \$10,600.
7. Bonds payable with a par value of \$24,000 on which there was an unamortized bond premium of \$2,000 were redeemed at 101.

Instructions

For each item, state where it is to be shown in the statement and then how you would present the necessary information, including the amount. Consider each item to be independent of the others. Assume that correct entries were made for all transactions as they took place.

CA23-5 (Purpose and Elements of SCF) GAAP requires the statement of cash flows be presented when financial statements are prepared.

Instructions

- (a) Explain the purposes of the statement of cash flows.
- (b) List and describe the three categories of activities that must be reported in the statement of cash flows.
- (c) Identify and describe the two methods that are allowed for reporting cash flows from operations.
- (d) Describe the financial statement presentation of noncash investing and financing transactions. Include in your description an example of a noncash investing and financing transaction.

CA23-6 ETHICS (Cash Flow Reporting) Brockman Guitar Company is in the business of manufacturing top-quality, steel-string folk guitars. In recent years, the company has experienced working capital problems resulting from the procurement of factory equipment, the unanticipated buildup of receivables and inventories, and the payoff of a balloon mortgage on a new manufacturing facility. The founder and president of the company, Barbara Brockman, has attempted to raise cash from various financial institutions, but to no avail because of the company's poor performance in recent years. In particular, the company's lead bank, First Financial, is especially concerned about Brockman's inability to maintain a positive cash position. The commercial loan officer from First Financial told Barbara, "I can't even consider your request for capital financing unless I see that your company is able to generate positive cash flows from operations."

Thinking about the banker's comment, Barbara came up with what she believes is a good plan: With a more attractive statement of cash flows, the bank might be willing to provide long-term financing. To "window dress" cash flows, the company can sell its accounts receivables to factors and liquidate its raw materials inventories. These rather costly transactions would generate lots of cash. As the chief accountant for Brockman Guitar, it is your job to tell Barbara what you think of her plan.

Instructions

Answer the following questions.

- (a) What are the ethical issues related to Barbara Brockman's idea?
- (b) What would you tell Barbara Brockman?

USING YOUR JUDGMENT

Financial Reporting Problem

The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- (a) Which method of computing net cash provided by operating activities does P&G use? What were the amounts of net cash provided by operating activities for the years 2012, 2013, and 2014? Which two items were most responsible for the decrease in net cash provided by operating activities in 2014?
- (b) What was the most significant item in the cash flows used for investing activities section in 2014?
What was the most significant item in the cash flows used for financing activities section in 2014?

1394 Chapter 23 Statement of Cash Flows

- (c) Where is “deferred income taxes” reported in P&G’s statement of cash flows? Why does it appear in that section of the statement of cash flows?
- (d) Where is depreciation reported in P&G’s statement of cash flows? Why is depreciation added to net income in the statement of cash flows?

Comparative Analysis Case

The Coca-Cola Company and PepsiCo, Inc.

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies’ complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies’ financial information to answer the following questions.

- (a) What method of computing net cash provided by operating activities does Coca-Cola use? What method does PepsiCo use? What were the amounts of cash provided by operating activities reported by Coca-Cola and PepsiCo in 2014?
- (b) What was the most significant item reported by Coca-Cola and PepsiCo in 2014 in their investing activities sections? What is the most significant item reported by Coca-Cola and PepsiCo in 2014 in their financing activities sections?
- (c) What were these two companies’ trends in net cash provided by operating activities over the period 2012 to 2014?
- (d) Where is “depreciation and amortization” reported by Coca-Cola and PepsiCo in their statements of cash flows? What is the amount and why does it appear in that section of the statement of cash flows?
- (e) Based on the information contained in Coca-Cola’s and PepsiCo’s financial statements, compute the following 2014 ratios for each company. These ratios require the use of statement of cash flows data. (These ratios were covered in Chapter 5.)
- (1) Current cash debt coverage.
 - (2) Cash debt coverage.
- (f) What conclusions concerning the management of cash can be drawn from the ratios computed in (e)?

Financial Statement Analysis Case

Vermont Teddy Bear Co.

Founded in the early 1980s, the **Vermont Teddy Bear Co.** designs and manufactures American-made teddy bears and markets them primarily as gifts called Bear-Grams or Teddy Bear-Grams. Bear-Grams are personalized teddy bears delivered directly to the recipient for special occasions such as birthdays and anniversaries. The Shelburne, Vermont, company’s primary markets are New York, Boston, and Chicago. Sales have jumped dramatically in recent years. Such dramatic growth has significant implications for cash flows. Provided below are the cash flow statements for two recent years for the company.

	Current Year	Prior Year
Cash flows from operating activities:		
Net income	\$ 17,523	\$ 838,955
Adjustments to reconcile net income to net cash provided by operating activities		
Deferred income taxes	(69,524)	(146,590)
Depreciation and amortization	316,416	181,348
Changes in assets and liabilities:		
Accounts receivable, trade	(38,267)	(25,947)
Inventories	(1,599,014)	(1,289,293)
Prepaid and other current assets	(444,794)	(113,205)
Deposits and other assets	(24,240)	(83,044)
Accounts payable	2,017,059	(284,567)
Accrued expenses	61,321	170,755
Accrued interest payable, debentures	—	(58,219)
Other	—	(8,960)
Income taxes payable	—	117,810
Net cash provided by (used for) operating activities	236,480	(700,957)
Net cash used for investing activities	(2,102,892)	(4,422,953)
Net cash (used for) provided by financing activities	(315,353)	9,685,435
Net change in cash and cash equivalents	(2,181,765)	4,561,525
Other information:		
Current liabilities	\$ 4,055,465	\$ 1,995,600
Total liabilities	4,620,085	2,184,386
Net sales	20,560,566	17,025,856

Instructions

- (a) Note that net income in the current year was only \$17,523 compared to prior-year income of \$838,955, but net cash flow from operating activities was \$236,480 in the current year and a negative \$700,957 in the prior year. Explain the causes of this apparent paradox.
- (b) Evaluate Vermont Teddy Bear's liquidity, solvency, and profitability for the current year using cash flow-based ratios.

Accounting, Analysis, and Principles

The income statement for the year ended December 31, 2017, for Laskowski Manufacturing Company contains the following condensed information.

LASKOWSKI CO.		
INCOME STATEMENT		
Revenues		\$6,583,000
Operating expenses (excluding depreciation)	\$4,920,000	
Depreciation expense	<u>880,000</u>	<u>5,800,000</u>
Income before income tax		783,000
Income tax expense		<u>353,000</u>
Net income		<u>\$ 430,000</u>

Included in operating expenses is a \$24,000 loss resulting from the sale of machinery for \$270,000 cash. The company purchased machinery at a cost of \$750,000.

Laskowski reports the following balances on its comparative balance sheets at December 31.

LASKOWSKI CO.		
COMPARATIVE BALANCE SHEETS (PARTIAL)		
	<u>2017</u>	<u>2016</u>
Cash	\$672,000	\$130,000
Accounts receivable	775,000	610,000
Inventory	834,000	867,000
Accounts payable	521,000	501,000

Income tax expense of \$353,000 represents the amount paid in 2017. Dividends declared and paid in 2017 totaled \$200,000.

Accounting

Prepare the statement of cash flows using the indirect method.

Analysis

Laskowski has an aggressive growth plan, which will require significant investments in plant and equipment over the next several years. Preliminary plans call for an investment of over \$500,000 in the next year. Compute Laskowski's free cash flow (from Chapter 5) and use it to evaluate the investment plans with the use of only internally generated funds.

Principles

How does the statement of cash flows contribute to achieving the objective of financial reporting?

Codification Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE23-1 Access the glossary (“Master Glossary”) to answer the following.

- What are cash equivalents?
- What are financing activities?
- What are investing activities?
- What are operating activities?

CE23-2 Name five cash inflows that would qualify as a “financing activity.”

CE23-3 How should cash flows from purchases, sales, and maturities of available-for-sale securities be classified and reported in the statement of cash flows?

CE23-4 Do companies need to disclose information about investing and financing activities that do not affect cash receipts or cash payments? If so, how should such information be disclosed?

Codification Research Case

As part of the year-end accounting process for your company, you are preparing the statement of cash flows according to GAAP. One of your team, a finance major, believes the statement should be prepared to report the change in working capital, because analysts many times use working capital in ratio analysis. Your supervisor would like research conducted to verify the basis for preparing the statement of cash flows.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- What is the primary objective for the statement of cash flows? Is working capital the basis for meeting this objective?
- What information is provided in a statement of cash flows?
- List some of the typical cash inflows and outflows from operations.

ADDITIONAL PROFESSIONAL RESOURCES

Go to **WileyPLUS** for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

**IFRS Insights****LEARNING OBJECTIVE 6**

Compare the statement of cash flows under GAAP and IFRS.

As in GAAP, the statement of cash flows is a required statement for IFRS. In addition, the content and presentation of a U.S. statement of cash flows is similar to one used for IFRS. However, the disclosure requirements related to the statement of cash flows are more extensive under GAAP. *IAS 7* (“Cash Flow Statements”) provides the overall IFRS requirements for cash flow information.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to the statement of cash flows.

Similarities

- Both GAAP and IFRS require that companies prepare a statement of cash flows.
- Both IFRS and GAAP require that the statement of cash flows should have three major sections—operating, investing, and financing—along with changes in cash and cash equivalents.
- Similar to GAAP, the cash flow statement can be prepared using either the indirect or direct method under IFRS. For both IFRS and GAAP, most companies use the indirect method for reporting net cash flow from operating activities.
- The definition of cash equivalents used in IFRS is similar to that used in GAAP.

Differences

- A major difference in the definition of cash and cash equivalents is that in certain situations, bank overdrafts are considered part of cash and cash equivalents under IFRS (which is not the case in GAAP). Under GAAP, bank overdrafts are classified as financing activities.
- IFRS requires that non-cash investing and financing activities be excluded from the statement of cash flows. Instead, these non-cash activities should be reported elsewhere. This requirement is interpreted to mean that non-cash investing and financing activities should be disclosed in the notes to the financial statements instead of in the financial statements. Under GAAP, companies may present this information in the cash flow statement.
- One area where there can be substantive differences between IFRS and GAAP relates to the classification of interest, dividends, and taxes. IFRS provides more alternatives for disclosing these items, while GAAP requires that except for dividends paid (which are classified as a financing activity), these items are all reported as operating activities.

ABOUT THE NUMBERS

Significant Non-Cash Transactions

Because the statement of cash flows reports only the effects of operating, investing, and financing activities in terms of cash flows, it omits some **significant non-cash transactions** and other events that are investing or financing activities. Among the more common of these non-cash transactions that a company should report or disclose in some manner are the following.

1. Acquisition of assets by assuming liabilities (including finance lease obligations) or by issuing equity securities.
2. Exchanges of non-monetary assets.
3. Refinancing of long-term debt.
4. Conversion of debt or preference shares to ordinary shares.
5. Issuance of equity securities to retire debt.

Investing and financing transactions that do not require the use of cash are excluded from the statement of cash flows. If material in amount, these disclosures may be either narrative or summarized in a separate schedule. This schedule may appear in a separate note or supplementary schedule to the financial statements.

Illustration IFRS23-1 shows the presentation of these significant non-cash transactions or other events in a separate schedule in the notes to the financial statements.

Note G: Significant non-cash transactions. During the year, the company engaged in the following significant non-cash investing and financing transactions:

Issued 250,000 ordinary shares to purchase land and building	\$1,750,000
Exchanged land in Steadfast, New York, for land in Bedford, Pennsylvania	\$2,000,000
Converted 12% bonds to 50,000 ordinary shares	\$ 500,000

ILLUSTRATION IFRS23-1

Note Presentation of
Non-Cash Investing and
Financing Activities

Companies do not generally report certain other significant non-cash transactions or other events in conjunction with the statement of cash flows. Examples of these types of transactions are **share dividends, share splits, and restrictions on retained earnings**. Companies generally report these items, neither financing nor investing activities, in conjunction with the statement of changes in equity or schedules and notes pertaining to changes in equity accounts.

Special Disclosures

IAS 7 indicates that cash flows related to interest received and paid, and dividends received and paid, should be separately disclosed in the statement of cash flows. IFRS allows flexibility in how these items are classified in the statement of cash flows. However, each item should be classified in a consistent manner from period to period as operating, investing, or financing cash flows. *For homework purposes, classify interest received and paid and dividends received as part of cash flows from operating activities and dividends paid as cash flows from financing activities.* The justification for reporting the first three items in cash flows from operating activities is that each item affects net income. Dividends paid, however, do not affect net income and are often considered a cost of financing.

Companies should also disclose income taxes paid separately in the cash flows from operating activities unless they can be separately identified as part of investing or financing activities. While tax expense may be readily identifiable with investing or financing activities, the related tax cash flows are often impracticable to identify and may arise in a different period from the cash flows of the underlying transaction. Therefore, taxes paid are usually classified as cash flows from operating activities. IFRS requires that the cash paid for taxes, as well as cash flows from interest and dividends received and paid, be disclosed. The category (operating, investing, or financing) that each item was included in must be disclosed as well.

An example of such a disclosure from the notes to **Daimler**'s financial statements is provided in Illustration IFRS23-2.

ILLUSTRATION IFRS23-2

Note Disclosure of Interest,
Taxes, and Dividends

Daimler

Cash provided by operating activities includes the following cash flows:

(in millions of €)	2015	2014	2013
Interest paid	(894)	(651)	(1,541)
Interest received	471	765	977
Income taxes paid, net	(358)	(898)	(1,020)
Dividends received	109	67	69

Other companies choose to report these items directly in the statement of cash flows. In many cases, companies start with income before income taxes and then show income taxes paid as a separate item. In addition, they often add back interest expense on an accrual basis and then subtract interest paid. Reporting these items in the operating activities section is shown for Mermel Company in Illustration IFRS23-3.

ILLUSTRATION IFRS23-3

Reporting of Interest,
Taxes, and Dividends
in the Operating Section

MERMEL COMPANY		
STATEMENT OF CASH FLOWS (\$'000,000)		
(OPERATING ACTIVITIES SECTION ONLY)		
Income before income tax		\$ 4,000
Adjustments to reconcile income before income tax to net cash provided by operating activities:		
Depreciation expense	\$1,000	
Interest expense	500	
Investment revenue (dividends)	(650)	
Decrease in inventories	1,050	
Increase in trade receivables	(310)	1,590
Cash generated from operations		5,590
Interest paid	(300)	
Income taxes paid	(760)	(1,060)
Net cash provided by operating activities		\$ 4,530

Companies often provide a separate section to identify interest and income taxes paid.

ON THE HORIZON

Presently, the IASB and the FASB are involved in a joint project on the presentation and organization of information in the financial statements. With respect to the cash flow statement specifically,

the notion of *cash equivalents* will probably not be retained. The definition of cash in the existing literature would be retained, and the statement of cash flows would present information on changes in cash only. In addition, the IASB and FASB favor presentation of operating cash flows using the direct method only. This approach is generally opposed by the preparer community.

IFRS SELF-TEST QUESTIONS

1. Which of the following is true regarding the statement of cash flows under IFRS?
 - (a) The statement of cash flows has two major sections—operating and non-operating.
 - (b) The statement of cash flows has two major sections—financing and investing.
 - (c) The statement of cash flows has three major sections—operating, investing, and financing.
 - (d) The statement of cash flows has three major sections—operating, non-operating, and financing.
2. In the case of a bank overdraft:
 - (a) GAAP typically includes the amount in cash and cash equivalents.
 - (b) IFRS typically includes the amount in cash equivalents but not in cash.
 - (c) GAAP typically treats the overdraft as a liability, and reports the amount in the financing section of the statement of cash flows.
 - (d) IFRS typically treats the overdraft as a liability, and reports the amount in the investing section of the statement of cash flows.
3. Under IFRS, significant non-cash transactions:
 - (a) are classified as operating, if they are related to income items.
 - (b) are excluded from the statement of cash flows and disclosed in a narrative form or summarized in a separate schedule.
 - (c) are classified as an investing or financing activity.
 - (d) are classified as an operating activity, unless they can be specifically identified with financing or investing activities.
4. For purposes of the statement of cash flows, under IFRS interest paid is treated as:
 - (a) an operating activity in all cases.
 - (b) an investing or operating activity, depending on use of the borrowed funds.
 - (c) either a financing or investing activity.
 - (d) either an operating or financing activity, but treated consistently from period to period.
5. For purposes of the statement of cash flows, under IFRS income taxes paid are treated as:
 - (a) cash flows from operating activities unless they can be separately identified as part of investing or financing activities.
 - (b) an operating activity in all cases.
 - (c) an investing or operating activity, depending on whether a refund is received.
 - (d) either operating, financing, or investing activity, but treated consistently to other companies in the same industry.

IFRS CONCEPTS AND APPLICATION

- IFRS23-1** Where can authoritative IFRS related to the statement of cash flows be found?
- IFRS23-2** Briefly describe some of the similarities and differences between GAAP and IFRS with respect to cash flow reporting.
- IFRS23-3** What are some of the key obstacles for the FASB and IASB within their accounting guidance in the area of cash flow reporting? Explain.
- IFRS23-4** Stan Conner and Mark Stein were discussing the statement of cash flows of Bombeck Co. In the notes to the statement of cash flows was a schedule entitled “Non-cash investing and financing activities.” Give three examples of significant non-cash transactions that would be reported in this schedule.
- IFRS23-5** Springsteen Co. had the following activity in its most recent year of operations.
- | | |
|--|--|
| (a) Pension expense exceeds amount funded. | (g) Amortization of intangible assets. |
| (b) Redemption of bonds payable. | (h) Purchase of treasury shares. |
| (c) Sale of building at book value. | (i) Issuance of bonds for land. |
| (d) Depreciation. | (j) Payment of dividends. |
| (e) Exchange of equipment for furniture. | (k) Increase in interest receivable on notes receivable. |
| (f) Issuance of ordinary shares. | (l) Purchase of equipment. |

Instructions

Classify the items as (1) operating—add to net income, (2) operating—deduct from net income, (3) investing, (4) financing, or (5) significant non-cash investing and financing activities. Use the indirect method.

1400 Chapter 23 Statement of Cash Flows

IFRS23-6 Following are selected statement of financial position accounts of Sander Bros. Corp. at December 31, 2017 and 2016, and the increases or decreases in each account from 2016 to 2017. Also presented is selected income statement information for the year ended December 31, 2017, and additional information.

Selected statement of financial position accounts	2017	2016	Increase (Decrease)
<u>Assets</u>			
Property, plant, and equipment	\$277,000	\$247,000	\$30,000
Accumulated depreciation	(178,000)	(167,000)	(11,000)
Accounts receivable	34,000	24,000	10,000
<u>Equity and liabilities</u>			
Share capital—ordinary, \$1 par	\$ 22,000	\$ 19,000	\$ 3,000
Share premium—ordinary	9,000	3,000	6,000
Retained earnings	104,000	91,000	13,000
Bonds payable	49,000	46,000	3,000
Dividends payable	8,000	5,000	3,000
Selected income statement information for the year ended December 31, 2017			
Sales revenue	\$155,000		
Depreciation	38,000		
Gain on sale of equipment	14,500		
Net income	31,000		

Additional information:

1. During 2017, equipment costing \$45,000 was sold for cash.
2. Accounts receivable relate to sales of merchandise.
3. During 2017, \$25,000 of bonds payable were issued in exchange for property, plant, and equipment.

There was no amortization of bond discount or premium.

Instructions

Determine the category (operating, investing, or financing) and the amount that should be reported in the statement of cash flows for the following items.

- (a) Payments for purchase of property, plant, and equipment.
- (b) Proceeds from the sale of equipment.
- (c) Cash dividends paid.
- (d) Redemption of bonds payable.

IFRS23-7 Dingel Corporation has contracted with you to prepare a statement of cash flows. The controller has provided the following information.

	December 31	
	2017	2016
Buildings	\$ -0-	\$29,750
Equipment	45,000	20,000
Patents	5,000	6,250
Investments	-0-	3,000
Inventory	12,000	9,000
Accounts receivable	12,250	10,000
Cash	33,500	13,000
	<u>\$107,750</u>	<u>\$91,000</u>
Share capital—ordinary	\$ 43,000	\$33,000
Retained earnings	20,750	6,000
Allowance for doubtful accounts	3,000	4,500
Accumulated depreciation on equipment	2,000	4,500
Accumulated depreciation on buildings	-0-	6,000
Accounts payable	5,000	3,000
Dividends payable	-0-	5,000
Long-term notes payable	31,000	25,000
Notes payable, short-term (non-trade)	3,000	4,000
	<u>\$107,750</u>	<u>\$91,000</u>

Additional data related to 2017 are as follows.

1. Equipment that had cost \$11,000 and was 40% depreciated at time of disposal was sold for \$2,500.
2. \$10,000 of the long-term notes payable was paid by issuing ordinary shares.
3. Cash dividends paid were \$5,000.
4. On January 1, 2017, the building was completely destroyed by a flood. Insurance proceeds on the building were \$32,000.
5. Equity investments (non-trading) were sold at \$1,700 above their cost.
6. Cash was paid for the acquisition of equipment.
7. A long-term note for \$16,000 was issued for the acquisition of equipment.
8. Interest of \$2,000 and income taxes of \$6,500 were paid in cash.

Instructions

Prepare a statement of cash flows using the indirect method.

Professional Research

IFRS23-8 As part of the year-end accounting process for your company, you are preparing the statement of cash flows according to IFRS. One of your team, a finance major, believes the statement should be prepared to report the change in working capital because analysts many times use working capital in ratio analysis. Your supervisor would like research conducted to verify the basis for preparing the statement of cash flows.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) What is the primary objective for the statement of cash flows? Is working capital the basis for meeting this objective?
- (b) What information is provided in a statement of cash flows?
- (c) List some of the typical cash inflows and outflows from operations.

International Financial Reporting Problem

Marks and Spencer plc (M&S)

IFRS23-9 The financial statements of M&S are presented in Appendix E. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- (a) Which method of computing net cash provided by operating activities does M&S use? What were the amounts of net cash provided by operating activities for the years 2014 and 2015? Which two items were most responsible for the increase in net cash provided by operating activities in 2015?
- (b) What was the most significant item in the cash flows used for investing activities section in 2015? What was the most significant item in the cash flows used for financing activities section in 2015?
- (c) Where is "deferred income taxes" reported in M&S's statement of cash flows? Why does it appear in that section of the statement of cash flows?
- (d) Where is depreciation reported in M&S's statement of cash flows? Why is depreciation added to net income in the statement of cash flows?

Full Disclosure in Financial Reporting

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1** Review the full disclosure principle and describe how it is implemented.
- 2** Discuss the disclosure requirements for related-party transactions, post-balance-sheet events, major business segments, and interim reporting.
- 3** Identify the major disclosures in the auditor's report and understand management's responsibilities for the financial statements.
- 4** Identify reporting issues related to financial forecasts and fraudulent financial reporting.

HIGH-QUALITY FINANCIAL REPORTING—ALWAYS IN FASHION

Here are excerpts from leading experts regarding the importance of high-quality financial reporting:

Warren E. Buffett, Chairman and Chief Executive Officer, **Berkshire Hathaway Inc.**:

Financial reporting for Berkshire Hathaway, and for me personally, is the beginning of every decision that we make around here in terms of capital. I'm punching out 10-Ks and 10-Qs every single day. We look at the numbers and try to evaluate the quality of the financial reporting, and then we try to figure out what that means for the bonds and stocks that we're looking at, and thinking of either buying or selling.

Judy Lewent, former Executive Vice President and Chief Financial Officer, **Merck & Co., Inc.**:

Higher standards, when properly implemented, drive excellence. I can make a parallel to the pharmaceutical industry. If you look around the world at where innovations come from, economists have studied and seen that where regulatory standards are the highest is where innovation is also the highest.

Floyd Norris, Chief Financial Correspondent, **The New York Times**:

We are in a situation now in our society where the temptations to provide "bad" financial reporting are probably greater than they used to be. The need to get the stock price up, or to keep it up, is intense. So, the temptation to play games, the temptation to manage earnings—some of which can be legitimate and some of which cannot be—is probably greater than it used to be.

Abby Joseph Cohen, Chair, Investment Policy Committee, **Goldman, Sachs & Co.**:

High-quality financial reporting is perhaps the most important thing we can expect from companies. For investors to make good decisions—whether those investors are buying stocks or bonds or making private investments—they need to know the truth. And we think that when information is as clear as possible and is reported as frequently as makes sense, investors can do their jobs as best they can.

We can also get insight into the importance of high-quality reporting based on the market assessment of companies perceived to have poor-quality reporting. At one time, **Coach, Inc.** stopped reporting as separate items sales from regular stores (full price) and factory outlets. As a result, readers of its financial statements had a hard time determining the source of Coach's sales growth. Analysts were especially concerned that the less-transparent reporting might obscure slowing sales at its regular stores, as consumers cut down on luxury goods in the sluggish economy. Did Coach's stock price suffer as a result of this lower-quality reporting? You bet, as shown in the price graph on the next page.

In the year following the change in reporting, Coach's stock price was down 34 percent. As one analyst noted, "It's never a good sign when you reduce transparency . . . It's a sign of weakness."

Another example is the recent case of **Toshiba**. It disclosed it would restate prior year results due to questionable expense recognition policies. Its stock price tumbled 50 percent in the three months following the revelation. According to one analyst, "The new development . . . is worsening [investor] uncertainty further" because Toshiba had already delayed reporting results while it investigated the accounting irregularities.

In short, the analyst's comments above illustrate why high-quality reporting is always in fashion—for companies, investors, and the capital markets. And, as the Coach and Toshiba examples illustrate, full disclosure is at the heart of high-quality reporting.

Porter, "As Belts Tighten, Coach Feels the Pinch," *BusinessWeek* (May 29, 2008), p. 66; and M. Heller, "Toshiba Shares Tumble on Accounting Revelations," *CFO.com* (May 11, 2015).

PREVIEW OF CHAPTER 24 As the opening story indicates, our markets will not function properly without transparent, complete, and truthful reporting of financial performance. Investors and other interested parties need to read and understand all aspects of financial reporting—the financial statements, the notes, the president's letter, and management's discussion and analysis. In this chapter, we cover the full disclosure principle in more detail and examine disclosures that must accompany financial statements so that they are not misleading. The content and organization of this chapter are as follows.

This chapter also includes numerous **conceptual and international discussions** that are integral to the topics presented here.

REVIEW AND PRACTICE

Go to the REVIEW AND PRACTICE section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions as well as additional exercises and practice problem with solutions are also available online.

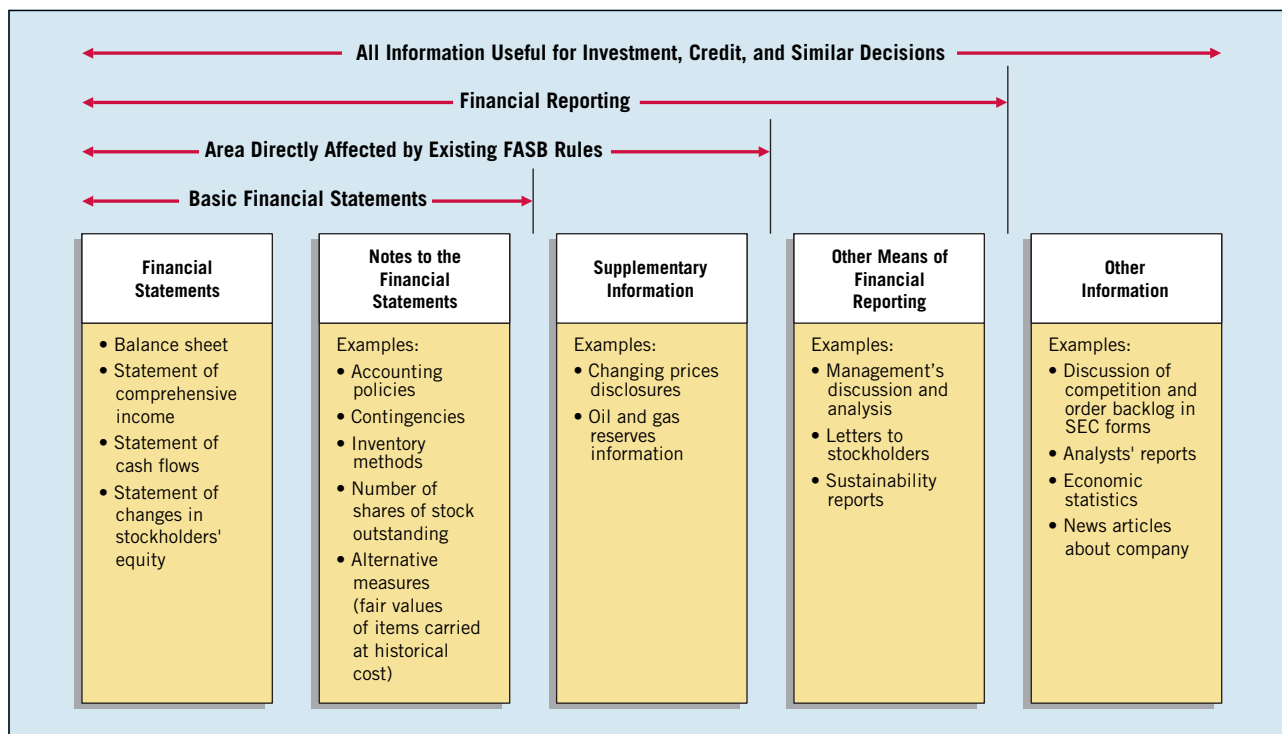

LEARNING OBJECTIVE 1

Review the full disclosure principle and describe how it is implemented.

FULL DISCLOSURE PRINCIPLE

According to the FASB Conceptual Framework, some useful information is best provided in the financial statements, and some is best provided by other means. For example, earnings and cash flows are readily available in financial statements—but investors might do better to look at comparisons to other companies in the same industry, found in news articles or brokerage house reports.

FASB rules directly affect financial statements, notes to the financial statements, and supplementary information. Other types of information found in the annual report, such as management's discussion and analysis, are not subject to FASB rules. Illustration 24-1 indicates the various types of financial information.

**ILLUSTRATION 24-1**

Types of Financial Information

UNDERLYING CONCEPTS

Here is a good example of the trade-off between cost considerations and the benefits of full disclosure.

As Chapter 2 indicated, the profession has adopted a **full disclosure principle**. The full disclosure principle calls for financial reporting of **any financial facts significant enough to influence the judgment of an informed reader**. In some situations, the benefits of disclosure may be apparent but the costs uncertain. In other instances, the costs may be certain but the benefits of disclosure not as apparent.

For example, the SEC required companies to provide expanded disclosures about their contractual obligations. In light of the off-balance-sheet accounting frauds at companies like **Enron**, the benefits of these expanded disclosures seem fairly obvious to the investing public. While no one has documented the exact costs of disclosure in these situations, they would appear to be relatively small.

On the other hand, the cost of disclosure can be substantial in some cases and the benefits difficult to assess. For example, at one time the *Wall Street Journal* reported that if segment reporting were adopted, a company like **Fruehauf** would have had to increase its accounting staff 50 percent, from 300 to 450 individuals. In this case, the cost of disclosure can be measured, but the benefits are less well defined.

Some even argue that the reporting requirements are so detailed and substantial that users have a difficult time absorbing the information. These critics charge the profession with engaging in **information overload**.

Financial disasters at **Microstrategy**, **PharMor**, **WorldCom**, and **Lehman** highlight the difficulty of implementing the full disclosure principle. They raise the issue of why investors were not aware of potential problems. Was the information these companies presented not comprehensible? Was it buried? Was it too technical? Was it properly presented and fully disclosed as of the financial statement date, but the situation later deteriorated? Or was it simply not there? In the following sections, we describe the elements of high-quality disclosure that will enable companies to avoid these disclosure pitfalls.

Increase in Reporting Requirements

Disclosure requirements have increased substantially. One survey showed that the size of many companies' annual reports is growing in response to demands for increased transparency. For example, annual report page counts ranged from 70 pages for **Gateway** up to a whopping 244 pages in **Eastman Kodak's** annual report. And annual report lengths continue to grow in the post-Sarbanes-Oxley environment, with the number of companies producing reports over 100 pages increasing from 19 percent to 37 percent—almost double.¹ This result is not surprising. As illustrated throughout this textbook, the FASB has issued many pronouncements in recent years that have substantial disclosure provisions.

The reasons for this increase in disclosure requirements are varied. Some of them are:

- **Complexity of the business environment.** The increasing complexity of business operations magnifies the difficulty of distilling economic events into summarized reports. Such areas as derivatives, leasing, business combinations, pensions, financing arrangements, revenue recognition, and deferred taxes are complex. As a result, companies extensively use **notes to the financial statements** to explain these transactions and their future effects.
- **Necessity for timely information.** Today, more than ever before, users are demanding information that is current and predictive. For example, users want more complete **interim data**. Also, the SEC recommends published financial forecasts, long avoided and even feared by management.
- **Accounting as a control and monitoring device.** The government has recently sought public disclosure of such phenomena as management compensation, off-balance-sheet financing arrangements, and related-party transactions. An “Enronitis” concern is expressed in many of these newer disclosure requirements, and the SEC has selected accountants and auditors as the agents to assist in controlling and monitoring these concerns.

Differential Disclosure

A trend toward **differential disclosure** is also occurring. For example, the SEC requires that companies report to it certain substantive information that is not found in annual reports to stockholders. Likewise, the FASB, recognizing that certain disclosure requirements are costly and unnecessary for certain companies, has eliminated reporting requirements for nonpublic enterprises in such areas as fair value of financial instruments and segment reporting.

Some still complain that the FASB has not gone far enough. They note that certain types of companies (small or nonpublic) should not have to follow complex GAAP

UNDERLYING CONCEPTS

Surveys indicate that users differ in their needs for information and that not all companies should report all elements of information. Thus, some contend that companies should report only information that users and preparers agree is needed in the particular circumstances.

¹MWW Group, *MWW White Paper: Annual Report* (Winter 2012). See also *Final Report of the Advisory Committee on Improvements to Financial Reporting to the United States Securities and Exchange Commission* (August 1, 2008) for discussion of the need to address the growing volume and complexity of the financial reports and disclosures.

requirements such as those for deferred income taxes, leases, or pensions. This issue, often referred to as “**big GAAP versus little GAAP**,” continues to be controversial.²

The FASB has traditionally taken the position that there should be one set of GAAP. However, due to growing concern about differential costs and benefits of a “one size fits all” reporting package, the FASB is considering providing alternative accounting treatments for private companies in areas that include recognition and measurement, presentation and disclosure, effective dates, and transition methods for financial accounting standards. Since 2012, the FASB has worked with the Private Company Council (PCC) to improve the process of setting accounting standards for private companies. The PCC uses the recently developed Private Company Decision-Making Framework³ to evaluate whether alternatives to existing GAAP are necessary to address the needs of users of private company financial statements. The PCC also provides input to the FASB on the appropriate treatment for private companies for items under active consideration on the FASB’s technical agenda. We provide an expanded discussion of the PCC and private company alternatives in Appendix A.

INTERNATIONAL PERSPECTIVE

IFRS allows different accounting for small- and medium-sized entities.

EVOLVING ISSUE

There is no better illustration of the adage that both quality and quantity are important than the issue of financial disclosure. While the full disclosure principle holds that more is better, how much more and of what form? An evaluation of this issue requires careful analysis of costs and benefits. Furthermore, as noted by one FASB member, the usefulness of expanded required disclosure also depends on users’ ability to distinguish between the form of reporting (i.e., disclosed versus recognized items in financial statements). Research to date is inconclusive on this matter. So it is not just the amount but the quality.

The FASB has responded by initiating a Disclosure Framework project to improve the effectiveness of disclosures in notes to financial statements by clearly communicating the information that is most important to users of financial statements. To achieve this objective, the Disclosure Framework project comprises two components: (1) the Board’s decision process and (2) the entity’s decision process.

The Board’s decision process is intended to aid the FASB in identifying disclosures to be considered when setting disclosure requirements for individual accounting standards and evaluating existing disclosure requirements. The FASB is

DISCLOSURE—QUANTITY AND QUALITY

seeking comment on potentially useful information that generally should not be required in the notes. Examples are assumptions and expectations about uncertain future events that are not reflected in financial statements and information about matters that are not specific to the company and are common knowledge or readily and cost-effectively available from other sources. The Disclosure Framework project also addresses the decisions that companies make in determining what to disclose. Guidance for companies to make disclosure decisions will not be part of the Conceptual Framework but instead will be exposed separately in a proposed Accounting Standards Update.

The Disclosure Framework project has been well-received by a variety of stakeholders. One area that has generated some debate is the application of materiality in deciding when to disclose an item, which could reduce the volume of disclosure. The FASB observes that reducing the volume of the notes to financial statements is not the primary focus of the Disclosure Framework project. However, the Board hopes that a sharper focus on important information will result in reduced volume in most cases.

Choudhary, and K. Schipper, “Evidence that Market Participants Assess Recognized and Disclosed Items Similarly When Reliability Is Not an Issue,” *The Accounting Review* (July 2013); *Final Report of the Advisory Committee on Improvements to Financial Reporting to the United States Securities and Exchange Commission* (August 1, 2008); J. Ciesielski, “Materiality Matters,” *The Analyst’s Accounting Observer* (November 30, 2015); and FASB Exposure Draft, *Conceptual Framework for Financial Reporting: Chapter 8 Notes to Financial Statements* (March 2014), www.fasb.org.

²In response to cost-benefit concerns, the SEC has exempted some small public companies from certain rules implemented in response to the Sarbanes-Oxley Act. For example, smaller companies have more time to comply with the internal control rules required by the Sarbanes-Oxley law and have more time to file annual and interim reports.

Notes to the Financial Statements

As you know from your study of this textbook, notes are an integral part of the financial statements of a business enterprise. However, readers of financial statements often overlook them because they are highly technical and often appear in small print. **Notes are the means of amplifying or explaining the items presented in the main body of the statements.** They can explain in qualitative terms information pertinent to specific financial statement items. In addition, they can provide supplementary data of a quantitative nature to expand the information in the financial statements. Notes also can explain restrictions imposed by financial arrangements or basic contractual agreements. Although notes may be technical and difficult to understand, they provide meaningful information for the user of the financial statements.

Accounting Policies

Accounting policies are the specific accounting principles and methods a company currently uses and considers most appropriate to present fairly its financial statements. GAAP states that information about the accounting policies adopted by a reporting entity is essential for financial statement users in making economic decisions. It recommends that companies should present **as an integral part of the financial statements a statement identifying the accounting policies adopted and followed by the reporting entity.** Companies should present the disclosure as the first note or in a separate Summary of Significant Accounting Policies section preceding the notes to the financial statements.

The Summary of Significant Accounting Policies section answers such questions as: What method of depreciation is used on plant assets? What valuation method is employed on inventories? What amortization policy is followed in regard to intangible assets? How are marketing costs handled for financial reporting purposes?

Refer to the financial statements and notes to the financial statements for **The Procter & Gamble Company** (available online) for an illustration of note disclosure of accounting policies (Note 1) and other notes accompanying the audited financial statements.

Analysts examine carefully the summary of accounting policies to determine whether a company is using conservative or liberal accounting practices. For example, depreciating plant assets over an unusually long period of time is considered liberal. Using LIFO inventory valuation in a period of inflation is generally viewed as conservative.

Companies that fail to adopt high-quality reporting policies may be heavily penalized by the market. For example, as discussed in the opening story, when **Toshiba** disclosed that it would restate prior-year results due to questionable expense recognition policies, its share price dropped over 50 percent in just three months. Investors viewed Toshiba's quality of earnings as low.

Common Notes

We have discussed many of the **notes to the financial statements** throughout this textbook, and will discuss others more fully in this chapter. The more common are as follows.

MAJOR DISCLOSURES

INVENTORY. Companies should report the basis upon which inventory amounts are stated (e.g., lower-of-cost-or-net realizable value or lower-of-cost-or-market) and the method used in determining cost (LIFO, FIFO, average-cost, etc.). Manufacturers should report, either in the balance sheet or in a separate schedule in the notes, the inventory composition (finished goods, work in process, raw materials). Unusual or significant financing arrangements

relating to inventories that may require disclosure include transactions with related parties, product financing arrangements, firm purchase commitments, involuntary liquidation of LIFO inventories, and pledging of inventories as collateral. Chapter 9 (pages 464–465) illustrates these disclosures.

PROPERTY, PLANT, AND EQUIPMENT. Companies should state the basis of valuation for property, plant, and equipment. It is usually historical cost. Companies also should disclose pledges, liens, and other commitments related to these assets. In the presentation of depreciation, companies should disclose the following in the financial statements or in the notes: (1) depreciation expense for the period; (2) balances of major classes of depreciable assets, by nature and function, at the balance sheet date; (3) accumulated depreciation, either by major classes of depreciable assets or in total, at the balance sheet date; and (4) a general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets. Finally, companies should explain any major impairments. Chapter 11 (pages 573–575) illustrates property, plant, and equipment.

CREDITOR CLAIMS. Investors normally find it extremely useful to understand the nature and cost of creditor claims. However, the liabilities section in the balance sheet can provide the major types of liabilities only in the aggregate. Note schedules regarding such obligations provide additional information about how a company is financing its operations, the costs that it will bear in future periods, and the timing of future cash outflows. Financial statements must disclose for each of the five years following the date of the statements the aggregate amount of maturities and sinking fund requirements for all long-term borrowings. Chapter 14 (pages 741–742) illustrates these disclosures.

EQUITYHOLDERS' CLAIMS. Many companies present in the body of the balance sheet information about equity securities: the number of shares authorized, issued, and outstanding and the par value for each type of security. Or, companies may present such data in a note. Beyond that, a common equity note disclosure relates to contracts and senior securities outstanding that might affect the various claims of the residual equityholders. An example would be the existence of outstanding stock options, outstanding convertible debt, redeemable preferred stock, and convertible preferred stock. In addition, it is necessary to disclose certain types of restrictions currently in force. Generally, these types of restrictions involve the amount of earnings available for dividend distribution. Examples of these types of disclosures are illustrated in Chapter 15 (pages 799–802) and Chapter 16 (pages 860–861).

CONTINGENCIES AND COMMITMENTS. A company may have gain or loss contingencies that are not disclosed in the body of the financial statements. These contingencies include litigation, debt and other guarantees, possible tax assessments, renegotiation of government contracts, and sales of receivables with recourse. In addition, companies should disclose in the notes commitments that relate to dividend restrictions, purchase agreements (through-put and take-or-pay), hedge contracts, and employment contracts. Disclosures of such items are illustrated in Chapter 7 (page 351), Chapter 9 (page 454), and Chapter 13 (pages 684–687).

FAIR VALUES. Companies that have assets or liabilities measured at fair value must disclose both the cost and the fair value of all financial instruments in the notes to the financial statements. Fair value measurements may be used for many financial assets and liabilities, investments, impairments of long-lived assets, and some contingencies. Companies also provide disclosure of information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. This fair value hierarchy identifies three broad levels related to the measurement of fair values (Levels 1, 2, and 3). The levels indicate the reliability of the measurement of fair value information. Appendix 17B (pages 942–943) discusses in detail fair value disclosures.

DEFERRED TAXES, PENSIONS, AND LEASES. The FASB also requires extensive disclosure in the areas of deferred taxes, pensions, and leases. Chapter 19 (pages 1077–1079), Chapter 20 (pages 1144–1146), and Chapter 21 (pages 1227–1228) discuss in detail each of these disclosures. Users of financial statements should carefully read notes to the financial statements for information about off-balance-sheet commitments, future financing needs, and the quality of a company's earnings.

CHANGES IN ACCOUNTING PRINCIPLES. The profession defines various types of accounting changes and establishes guides for reporting each type. Companies discuss, either in the summary of significant accounting policies or in the other notes, changes in accounting principles (as well as material changes in estimates and corrections of errors). See Chapter 22 (pages 1288–1289).

In earlier chapters, we discussed the disclosures listed above. The following sections of this chapter illustrate four additional disclosures of significance—special transactions or events, subsequent events, segment reporting, and interim reporting.

WHAT DO THE NUMBERS MEAN?

Often, note disclosures are needed to give a complete picture of a company's financial position. A good example of such disclosures is the required disclosure of debt triggers that may be buried in financing arrangements. These triggers can require a company to pay off a loan immediately if the debt rating collapses; they are one of the reasons **Enron** crumbled so quickly. But few Enron stockholders knew about the debt triggers until the gun had gone off. Companies are also disclosing more about their bank credit lines, liquidity, and any special-purpose entities. (The latter were major villains in the Enron drama.)

Sources: Gretchen Morgenson, "Annual Reports: More Pages, but Better?" *The New York Times* (March 17, 2002); and D. Stead, "The Secrets in SEC Filings," *BusinessWeek* (August 25, 2008), p. 12.

How can you get better informed about note disclosures that may contain important information related to your investments? Beyond your study in this class, a good Web resource for understanding the contents of note disclosures is <http://www.footnoted.com>. This site highlights "the things companies bury in their SEC filings." It notes that company reports are more complete of late, but only the largest companies are preparing documents that are readable. As the editor of the site noted, "[some companies] are being dragged kicking and screaming into plain English."

FOOTNOTE SECRETS

DISCLOSURE ISSUES

Disclosure of Special Transactions or Events

Related-party transactions, errors and fraud, and illegal acts pose especially sensitive and difficult problems. The accountant/auditor who has responsibility for reporting on these types of transactions must take care to properly balance the rights of the reporting company and the needs of users of the financial statements.

Related Parties

Related-party transactions arise when a company engages in transactions in which one of the parties has the ability to significantly influence the policies of the other. They may also occur when a nontransacting party has the ability to influence the policies of the two transacting parties.⁴ Competitive, free-market dealings may not exist in related-party transactions, and so an "arm's-length" basis cannot be assumed. Transactions

⁴Examples of related-party transactions include transactions between (a) a parent company and its subsidiaries; (b) subsidiaries of a common parent; (c) a company and trusts for the benefit of employees (controlled or managed by the enterprise); and (d) a company and its principal owners, management, or members of immediate families, and affiliates. Two classic cases of related-party transactions were **Enron**, with its misuse of special-purpose entities, and **Tyco International**, which forgave loans to its management team.

LEARNING OBJECTIVE 2

Discuss the disclosure requirements for related-party transactions, post-balance-sheet events, major business segments, and interim reporting.

See the FASB Codification References (page 1460).

such as borrowing or lending money at abnormally low or high interest rates, real estate sales at amounts that differ significantly from appraised value, exchanges of nonmonetary assets, and transactions involving enterprises that have no economic substance (“shell corporations”) suggest that related parties may be involved.

In order to make adequate disclosure, companies should report the economic substance, rather than the legal form, of these transactions. GAAP requires the following disclosures of material related-party transactions. **[1]**

1. The nature of the relationship(s) involved.
2. A description of the transactions (including transactions to which no amounts or nominal amounts were ascribed) for each of the periods for which income statements are presented.
3. The dollar amounts of transactions for each of the periods for which income statements are presented.
4. Amounts due from or to related parties as of the date of each balance sheet presented.

Illustration 24-2, from the annual report of **Harley-Davidson, Inc.**, shows disclosure of related-party transactions.

ILLUSTRATION 24-2
Disclosure of Related-Party Transactions

Harley-Davidson, Inc.

20. Related Party Transactions

A director of the Company is Chairman and Chief Executive Officer and an equity owner of Fred Deeley Imports Ltd. (Deeley Imports), the exclusive distributor of the Company's motorcycles in Canada. The Company recorded motorcycles and related products revenue and financial services revenue from Deeley Imports during 2014, 2013 and 2012 of \$194.8 million, \$204.8 million and \$187.1 million, respectively, and had finance receivables balances due from Deeley Imports of \$7.4 million, \$11.5 million and \$9.2 million at December 31, 2014, 2013 and 2012, respectively. All such products were provided in the ordinary course of business at prices and on terms and conditions that the Company believes are the same as those that would result from arm's-length negotiations between unrelated parties.

Errors, Fraud, and Illegal Acts

Many companies are involved in related-party transactions. Errors, fraud (sometimes referred to as irregularities), and illegal acts, however, are the exception rather than the rule. Accounting **errors** are **unintentional** mistakes, whereas **fraud** (misappropriation of assets and fraudulent financial reporting) involves **intentional** distortions of financial statements.⁵ As indicated earlier, companies should correct the financial statements when they discover errors. The same treatment should be given fraud. The discovery of fraud, however, gives rise to a different set of procedures and responsibilities for the accountant/auditor.⁶

Illegal acts encompass such items as illegal political contributions, bribes, kickbacks, and other violations of laws and regulations.⁷ In these situations, the accountant/auditor

⁵“Consideration of Fraud in a Financial Statement Audit,” *Statement on Auditing Standards No. 99* (New York: AICPA, 2002). We have an expanded discussion of fraudulent financial reporting later in this chapter. Since passage of the Sarbanes-Oxley Act, auditors of public companies are regulated by the Public Company Accounting Oversight Board (PCAOB). The PCAOB is now the audit standard-setter for auditors of public companies. It has adopted much of the prior auditing standards issued by the Auditing Standards Board of the AICPA.

⁶The profession became so concerned with certain management frauds that affect financial statements that it established a National Commission on Fraudulent Financial Reporting. The major purpose of this organization was to determine how fraudulent reporting practices could be constrained. Fraudulent financial reporting is discussed later in this chapter.

⁷“Illegal Acts by Clients,” *Statement on Auditing Standards No. 54* (New York: AICPA, 1988).

must evaluate the adequacy of disclosure in the financial statements. For example, if a company derives revenue from an illegal act that is considered material in relation to the financial statements, this information should be disclosed. The Sarbanes-Oxley Act is intended to deter these illegal acts. This law adds significant fines and longer jail time for those who improperly sign off on the correctness of financial statements that include willing and knowing misstatements.

Disclosure plays a very important role in these types of transactions because the events are more qualitative than quantitative and involve more subjective than objective evaluation. Users of the financial statements need some indication of the existence and nature of these transactions, through disclosures, modifications in the auditor's report, or reports of changes in auditors.

Post-Balance-Sheet Events (Subsequent Events)

Notes to the financial statements should explain any significant financial events that took place after the formal balance sheet date, but before the statement is issued. These events are referred to as **post-balance-sheet events**, or just plain **subsequent events**. Illustration 24-3 shows a time diagram of the subsequent events period.

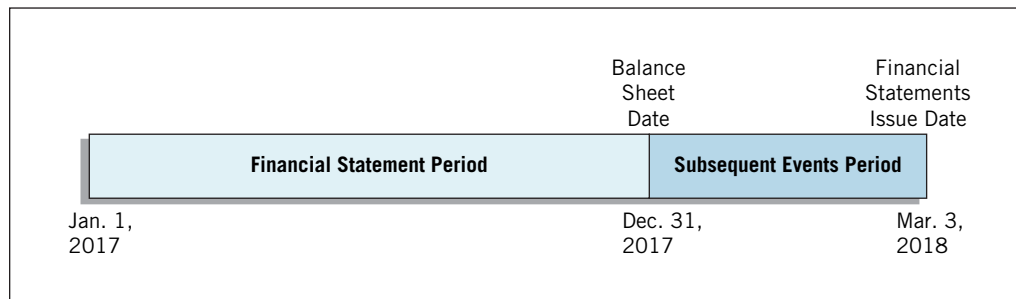

ILLUSTRATION 24-3

Time Periods for Subsequent Events

A period of several weeks, and sometimes months, may elapse after the end of the fiscal year but before the company issues financial statements. Various activities involved in closing the books for the period and issuing the statements all take time: counting and pricing the inventory, reconciling subsidiary ledgers with controlling accounts, preparing necessary adjusting entries, ensuring that all transactions for the period have been entered, obtaining an audit of the financial statements by independent certified public accountants, and printing the annual report. During the period between the balance sheet date and its distribution to stockholders and creditors, important transactions or other events may occur that materially affect the company's financial position or operating situation.

Many who read a balance sheet believe the balance sheet condition is constant, and they project it into the future. However, readers must be told if the company has experienced a significant change—e.g., sold one of its plants, acquired a subsidiary, settled significant litigation, or experienced any other important event in the post-balance-sheet period. Without an explanation in a note, the reader might be misled and draw inappropriate conclusions.

Two types of events or transactions occurring after the balance sheet date may have a material effect on the financial statements or may need disclosure so that readers interpret these statements accurately:

1. Events that provide additional evidence about conditions **that existed** at the balance sheet date, including the estimates inherent in the process of preparing financial statements. These events are referred to as **recognized subsequent events** and

require adjustments to the financial statements. All information available prior to the issuance of the financial statements helps investors and creditors evaluate estimates previously made. To ignore these subsequent events is to pass up an opportunity to improve the accuracy of the financial statements. This first type of event encompasses information that an accountant would have recorded in the accounts had the information been known at the balance sheet date.

For example, if a loss on an account receivable results from a customer's bankruptcy subsequent to the balance sheet date, the company adjusts the financial statements before their issuance. The bankruptcy stems from the customer's poor financial health existing at the balance sheet date.

The same criterion applies to settlements of litigation. The company must adjust the financial statements if the events that gave rise to the litigation, such as personal injury or patent infringement, took place prior to the balance sheet date.

- 2.** Events that provide evidence about conditions that **did not exist** at the balance sheet date but arise subsequent to that date. These events are referred as **nonrecognized subsequent events** and do not require adjustment of the financial statements. To illustrate, a loss resulting from a customer's fire or flood *after* the balance sheet date does not reflect conditions existing at that date. Thus, adjustment of the financial statements is not necessary. A company should not recognize subsequent events that provide evidence about conditions that did not exist at the date of the balance sheet but that arose after the balance sheet date.

The following are examples of nonrecognized subsequent events:

- (a) Sale of a bond or capital stock issued after the balance sheet date.
- (b) A business combination that occurs after the balance sheet date.
- (c) Settlement of litigation when the event giving rise to the claim took place after the balance sheet date.
- (d) Loss of plant or inventories as a result of fire or natural disaster that occurred after the balance sheet date.
- (e) Losses on receivables resulting from conditions (such as a customer's major casualty) arising after the balance sheet date.
- (f) Changes in the quoted market prices of securities or foreign exchange rates after the balance sheet date.
- (g) Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees after the balance sheet date. [2]⁸

Some nonrecognized subsequent events may have to be disclosed to keep the financial statements from being misleading. For such events, a company discloses the nature of the event and an estimate of its financial effect.

Illustration 24-4 presents an example of subsequent events disclosure, excerpted from the annual report of **Commercial Metals Company**.

Many subsequent events or developments do not require adjustment of or disclosure in the financial statements. Typically, these are nonaccounting events or conditions that management normally communicates by other means. These events include

UNDERLYING CONCEPTS

A company also should consider supplementing the historical financial statements with pro forma financial data. Occasionally, a nonrecognized subsequent event may be so significant that disclosure can best be made by means of pro forma financial data.

⁸The effects from natural disasters, like hurricanes Katrina, Rita, and Sandy, which occurred after the year-end for companies with August fiscal years, require disclosure in order to keep the statements from being misleading. Some companies had to consider whether these disasters affected their ability to continue as going concerns. *Accounting Trends and Techniques* listed the following types of subsequent events and their frequency of occurrence among the 500 companies surveyed: acquisitions, 32; debt incurred, reduced, or refinanced, 31; business combinations pending or effected, 29; capital stock issued or purchased, 18; discontinued operations or asset disposals, 15; litigation, 14; and restructuring/bankruptcy, 13.

legislation, product changes, management changes, strikes, unionization, marketing agreements, and loss of important customers.

Commercial Metals Company

NOTE 24. SUBSEQUENT EVENTS (August 31 Fiscal Year End)

In September 2014, the Company made the decision to exit its steel distribution business in Australia. Despite focused efforts and substantial progress to stabilize and improve the results of the Australian distribution business, the Company determined that achieving acceptable financial returns would take additional time and investment.

ILLUSTRATION 24-4

Disclosure of Subsequent Events

Reporting for Diversified (Conglomerate) Companies

In certain business climates, companies have a tendency to diversify their operations. Take the case of conglomerate **General Electric (GE)**, whose products include locomotives, jet engines, and water purification systems. Or, consider cable giant **Comcast**; its **NBC Universal** subsidiary owns **NBC TV**, **Telemundo**, **Universal Pictures**, and **Universal Parks and Resorts**. When businesses are so diversified, investors and investment analysts want more information about the details behind conglomerate financial statements. Particularly, they want income statement, balance sheet, and cash flow information on the **individual segments** that compose the total income figure.

Illustration 24-5 shows **segmented** (disaggregated) financial information of an office equipment and auto parts company.

OFFICE EQUIPMENT AND AUTO PARTS COMPANY			
INCOME STATEMENT DATA			
(IN MILLIONS)			
	Consolidated	Office Equipment	Auto Parts
Net sales	\$78.8	\$18.0	\$60.8
Manufacturing costs			
Inventories, beginning	12.3	4.0	8.3
Materials and services	38.9	10.8	28.1
Wages	12.9	3.8	9.1
Inventories, ending	(13.3)	(3.9)	(9.4)
	50.8	14.7	36.1

Income taxes	(9.3)	(1.0)	(8.3)
Net income	\$ 6.6	\$ 0.7	\$ 5.9

ILLUSTRATION 24-5

Segmented Income Statement

Much information is hidden in the aggregated totals. If the analyst has only the consolidated figures, he/she cannot tell the extent to which the differing product lines **contribute to the company's profitability, risk, and growth potential**. For example, in Illustration 24-5, the office equipment segment looks like a risky venture. Segmented reporting would provide useful information about the two business segments and would be useful for making an informed investment decision regarding the whole company.

A classic situation that demonstrates the need for segmented data involved **Caterpillar, Inc.** The SEC cited Caterpillar because it failed to tell investors that nearly a quarter of its income in one year came from a Brazilian unit and was nonrecurring in nature. The company knew that different economic policies in the next year would probably greatly affect earnings of the Brazilian unit. But Caterpillar presented its financial results on a consolidated basis, not disclosing the Brazilian operations. The SEC found that Caterpillar's failure to include information about Brazil left investors with an incomplete picture of the company's financial results and denied investors the opportunity to see the company "through the eyes of management."

Companies have always been somewhat hesitant to disclose segmented data for various reasons:

1. Without a thorough knowledge of the business and an understanding of such important factors as the competitive environment and capital investment requirements, the investor may find the segmented information meaningless or may even draw improper conclusions about the reported earnings of the segments.
2. Additional disclosure may be helpful to competitors, labor unions, suppliers, and certain government regulatory agencies, and thus harm the reporting company.
3. Additional disclosure may discourage management from taking intelligent business risks because segments reporting losses or unsatisfactory earnings may cause stockholder dissatisfaction with management.
4. The wide variation among companies in the choice of segments, cost allocation, and other accounting problems limits comparability, and hence the usefulness of segmented information.
5. The investor is investing in the company as a whole and not in the particular segments, and it should not matter how any single segment is performing if the overall performance is satisfactory.
6. Certain technical problems, such as classification of segments and allocation of segment revenues and costs (especially "common costs"), are formidable.

On the other hand, the advocates of segmented disclosures offer these reasons in support of the practice:

1. Investors need segmented information to make an intelligent investment decision regarding a diversified company.
 - (a) Sales and earnings of individual segments enable investors to evaluate the differences between segments in growth rate, risk, and profitability, and to forecast consolidated profits.
 - (b) Segmented reports help investors evaluate the company's investment worth by disclosing the nature of a company's businesses and the relative size of the components.
2. The absence of segmented reporting by a diversified company may put its unsegmented, single product-line competitors at a competitive disadvantage because the conglomerate may obscure information that its competitors must disclose.

The advocates of segmented disclosures appear to have a much stronger case. Many users indicate that segmented data are the most useful financial information provided, aside from the basic financial statements. As a result, the FASB has issued extensive reporting guidelines in this area.

Objective of Reporting Segmented Information

The objective of reporting segmented financial data is to provide information about the **different types of business activities** in which an enterprise engages and the **different**

economic environments in which it operates. Meeting this objective will help users of financial statements do the following.

- (a) Better understand the enterprise's performance.
- (b) Better assess its prospects for future net cash flows.
- (c) Make more informed judgments about the enterprise as a whole.

Basic Principles

Financial statements can be disaggregated in several ways. For example, they can be disaggregated by products or services, by geography, by legal entity, or by type of customer. However, it is not feasible to provide all of that information in every set of financial statements. GAAP requires that general-purpose financial statements include selected information on a single basis of segmentation. Thus, a company can meet the segmented reporting objective by providing financial statements segmented based on how the company's operations are managed. The method chosen is referred to as the **management approach**. **[3] The management approach reflects how management segments the company for making operating decisions.** The segments are evident from the components of the company's organization structure. These components are called **operating segments**.

Identifying Operating Segments

An **operating segment** is a component of an enterprise:

- (a) That engages in business activities from which it earns revenues and incurs expenses.
- (b) Whose operating results are regularly reviewed by the company's chief operating decision-maker to assess segment performance and allocate resources to the segment.
- (c) For which discrete financial information is available that is generated by or based on the internal financial reporting system.

Companies may aggregate information about two or more operating segments only if the segments have the same basic characteristics in each of the following areas.

- (a) The nature of the products and services provided.
- (b) The nature of the production process.
- (c) The type or class of customer.
- (d) The methods of product or service distribution.
- (e) If applicable, the nature of the regulatory environment.

After the company decides on the possible segments for disclosure, it makes a quantitative materiality test. This test determines whether the segment is significant enough to warrant actual disclosure. An operating segment is deemed significant, and therefore a reportable segment, if it satisfies **one or more** of the following quantitative thresholds.

- 1.** Its **revenue** (including both sales to external customers and intersegment sales or transfers) is 10 percent or more of the combined revenue of all the company's operating segments.
- 2.** The absolute amount of its **profit or loss** is 10 percent or more of the greater, in absolute amount, of (a) the combined operating profit of all operating segments that did not incur a loss, or (b) the combined loss of all operating segments that did report a loss.
- 3.** Its **identifiable assets** are 10 percent or more of the combined assets of all operating segments.

In applying these tests, the company must consider two additional factors. First, segment data must explain a significant portion of the company's business. Specifically, the segmented results must equal or exceed 75 percent of the combined sales to unaffiliated customers for the entire company. This test prevents a company from providing limited information on only a few segments and lumping all the rest into one category.

Second, the profession recognizes that reporting too many segments may overwhelm users with detailed information. The FASB decided that 10 is a reasonable upper limit for the number of segments that a company must disclose.

To illustrate these requirements, assume a company has identified six possible reporting segments, as shown in Illustration 24-6 (000s omitted).

ILLUSTRATION 24-6
Data for Different Possible
Reporting Segments

Segments	Total Revenue (Unaffiliated)	Operating Profit (Loss)	Identifiable Assets
A	\$ 100	\$10	\$ 60
B	50	2	30
C	700	40	390
D	300	20	160
E	900	18	280
F	100	(5)	50
	<u>\$2,150</u>	<u>\$85</u>	<u>\$970</u>

The company would apply the respective tests as follows.

Revenue test: $10\% \times \$2,150 = \215 ; C, D, and E meet this test.

Operating profit (loss) test: $10\% \times \$90 = \9 (note that the \$5 loss is ignored because the test is based on non-loss segments); A, C, D, and E meet this test.

Identifiable assets tests: $10\% \times \$970 = \97 ; C, D, and E meet this test.

The reporting segments are therefore A, C, D, and E, assuming that these four segments have enough sales to meet the 75 percent of combined sales test. The 75 percent test is computed as follows.

75% of combined sales test: $75\% \times \$2,150 = \$1,612.50$. The sales of A, C, D, and E total \$2,000 ($\$100 + \$700 + \$300 + \900); therefore, the 75 percent test is met.

Measurement Principles

The accounting principles that companies use for segment disclosure need not be the same as the principles they use to prepare the consolidated statements. This flexibility may at first appear inconsistent. But, preparing segment information in accordance with generally accepted accounting principles would be difficult because some principles are not expected to apply at a segment level. Examples are accounting for the cost of company-wide employee benefit plans, accounting for income taxes in a company that files a consolidated tax return, and accounting for inventory on a LIFO basis if the pool includes items in more than one segment.

The FASB does not require allocations of joint, common, or company-wide costs solely for external reporting purposes. **Common costs** are those incurred for the benefit of more than one segment and whose interrelated nature prevents a completely objective division of costs among segments. For example, the company president's salary is difficult to allocate to various segments. Allocations of common costs are inherently arbitrary and may not be meaningful. There is a presumption that if companies allocate common costs to segments, these allocations are either directly attributable or reasonably allocable.

Segmented Information Reported

The FASB requires that an enterprise report the following.

- 1. General information about its operating segments.** This includes factors that management considers most significant in determining the company's operating segments, and the types of products and services from which each operating segment derives its revenues.
- 2. Segment profit and loss and related information.** Specifically, companies must report the following information about each operating segment if the amounts are included in determining segment profit or loss.
 - (a) Revenues from transactions with external customers.
 - (b) Revenues from transactions with other operating segments of the same enterprise.
 - (c) Interest revenue.
 - (d) Interest expense.
 - (e) Depreciation, depletion, and amortization expense.
 - (f) Unusual and infrequent items.
 - (g) Equity in the net income of investees accounted for by the equity method.
 - (h) Income tax expense or benefit.
 - (i) Significant noncash items other than depreciation, depletion, and amortization expense.
- 3. Segment assets.** A company must report each operating segment's total assets.
- 4. Reconciliations.** A company must provide a reconciliation of the total of the segments' revenues to total revenues, a reconciliation of the total of the operating segments' profits and losses to its income before income taxes, and a reconciliation of the total of the operating segments' assets to total assets.
- 5. Information about products and services and geographic areas.** For each operating segment not based on geography, the company must report (unless it is impracticable): (1) revenues from external customers, (2) long-lived assets, and (3) expenditures during the period for long-lived assets. This information, if material, must be reported (a) in the enterprise's country of domicile and (b) in each other country.
- 6. Major customers.** If 10 percent or more of company revenue is derived from a single customer, the company must disclose the total amount of revenue from each such customer by segment.

Illustration of Disaggregated Information

Illustration 24-7 (page 1418) shows the segment disclosure for **Johnson & Johnson**.

Interim Reports

Another source of information for the investor is interim reports. As noted earlier, **interim reports** cover periods of less than one year. The stock exchanges, the SEC, and the accounting profession have an active interest in the presentation of interim information.

The SEC mandates that certain companies file a **Form 10-Q**, in which a company discloses quarterly data similar to that disclosed in the annual report. It also requires those companies to disclose selected quarterly information in notes to the annual financial statements.

ILLUSTRATION 24-7

Segment Disclosure

Illustration 24-8 presents the selected quarterly disclosure of **Tootsie Roll Industries, Inc.** In addition to Form 10-Q, GAAP narrows the reporting alternatives related to interim reports. [4]

Because of the short-term nature of the information in these reports, there is considerable controversy as to the general approach companies should employ. One group, which favors the **discrete approach**, believes that companies should treat each interim period as a separate accounting period. Using that treatment, companies would follow the principles for deferrals and accruals used for annual reports. In this view, companies should report accounting transactions as they occur, and expense recognition should not change with the period of time covered.

Tootsie Roll Industries, Inc.

For the Year Ended December 31, 2014

	(Thousands of dollars except per share data)				
	First	Second	Third	Fourth	Total

4th Qtr	30.99	27.98	0.08

ILLUSTRATION 24-8

Disclosure of Selected Quarterly Data

Another group, which favors the **integral approach**, believes that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year. In this approach, companies should assign estimated expenses to parts of a year on the basis of sales volume or some other activity base.

At present, many companies follow the discrete approach for certain types of expenses and the integral approach for others, because the standards currently employed in practice are vague and lead to differing interpretations.

Interim Reporting Requirements

Generally, companies should use the same accounting principles for interim reports and for annual reports. They should recognize revenues in interim periods on the same basis as they are for annual periods. For example, if Cedars Corp. uses the percentage-of-completion method as the basis for recognizing revenue on an annual basis, then it should use the percentage-of-completion basis for interim reports as well. Also, Cedars should treat costs directly associated with revenues (product costs, such as materials, labor and related fringe benefits, and manufacturing overhead) in the same manner for interim reports as for annual reports.

Companies should use the same inventory pricing methods (FIFO, LIFO, etc.) for interim reports and for annual reports. However, the following exceptions are appropriate at interim reporting periods.

1. Companies may use the gross profit method for interim inventory pricing. But they must disclose the method and adjustments to reconcile with annual inventory.
2. When a company liquidates LIFO inventories at an interim date and expects to replace them by year-end, cost of goods sold should include the expected cost of replacing the liquidated LIFO base, rather than give effect to the interim liquidation.
3. Companies should not defer inventory market declines beyond the interim period unless they are temporary and no loss is expected for the fiscal year.
4. Companies ordinarily should defer planned variances under a standard cost system; such variances are expected to be absorbed by year-end.

Companies often charge to the interim period, as incurred, costs and expenses other than product costs (often referred to as **period costs**). But companies may allocate these

UNDERLYING CONCEPTS

For information to be relevant, it must be available to decision-makers before it loses its capacity to influence their decisions (timeliness). Interim reporting is an excellent example of this concept.

costs among interim periods on the basis of an estimate of time expired, benefit received, or activity associated with the periods. Companies display considerable latitude in accounting for these costs in interim periods, and many believe more definitive guidelines are needed.

Regarding disclosure, companies should report the following interim data at a minimum.

1. Sales or gross revenues, provision for income taxes, and net income.
2. Basic and diluted earnings per share where appropriate.
3. Seasonal revenue, cost, or expenses.
4. Significant changes in estimates or provisions for income taxes.
5. Disposal of a component of a business, and unusual or infrequently occurring items.
6. Contingent items.
7. Changes in accounting principles or estimates.
8. Significant changes in financial position.

The FASB encourages, but does not require, companies to publish an interim balance sheet and statement of cash flows. If a company does not present this information, it should disclose significant changes in such items as liquid assets, net working capital, long-term liabilities, and stockholders' equity.

Unique Problems of Interim Reporting

GAAP reflects a preference for the integral approach. However, within this broad guideline, a number of unique reporting problems develop related to the following items.

Advertising and Similar Costs. The general guidelines are that companies should defer in an interim period costs such as advertising if the benefits extend beyond that period; otherwise, the company should expense those costs as incurred. But such a determination is difficult, and even if the company defers the costs, how should it allocate them between quarters?

Because of the vague guidelines in this area, accounting for advertising varies widely. At one time, some companies in the food industry, such as **RJR Nabisco** and **Pillsbury**, charged advertising costs as a percentage of sales and adjusted to actual at year-end, whereas **General Foods** and **Kellogg** expensed these costs as incurred.

The same type of problem relates to such items as Social Security taxes, research and development costs, and major repairs. For example, should the company expense Social Security costs (payroll taxes) on highly paid personnel early in the year, or allocate and spread them to subsequent quarters? Should a major repair that occurs later in the year be anticipated and allocated proportionately to earlier periods?

Expenses Subject to Year-End Adjustment. Companies often do not know with a great deal of certainty amounts of bad debts, executive bonuses, pension costs, and inventory shrinkage until year-end. **They should estimate these costs and allocate them to interim periods as best they can.** Companies use a variety of allocation techniques to accomplish this objective.

Income Taxes. Not every dollar of corporate taxable income is taxed at the same rate; the tax rate structure is progressive. This aspect of business income taxes poses a problem in preparing interim financial statements. Should the company use the **annualized approach**, which is to annualize income to date and accrue the proportionate income tax for the period to date? Or should it follow the **marginal principle approach**, which is to apply the lower rate of tax to the first amount of income earned? At one time, companies generally followed the latter approach and accrued the tax applicable to each additional dollar of income.

The profession now, however, uses the annualized approach. This requires that “at the end of each interim period the company should make its best estimate of the effective tax rate expected to be applicable for the full fiscal year. The rate so determined should be used in providing for income taxes on income for the quarter.” [5]⁹

Because businesses did not uniformly apply this guideline in accounting for similar situations, the FASB issued authoritative guidance. GAAP now requires companies, when computing the year-to-date tax, to apply the **estimated annual effective tax rate** to the year-to-date “ordinary” income at the end of each interim period. Further, the **interim period tax** related to “ordinary” income shall be the difference between the amount so computed and the amounts reported for previous interim periods of the fiscal period. [6]¹⁰

Earnings per Share. Interim reporting of earnings per share has all the problems inherent in computing and presenting annual earnings per share, and then some. If a company issues shares in the third period, EPS for the first two periods will not reflect year-end EPS. For purposes of computing earnings per share and making the required disclosure determinations, each interim period should stand alone. That is, all applicable tests should be made for that single period.

Seasonality. **Seasonality** occurs when most of a company’s sales occur in one short period of the year while certain costs are fairly evenly spread throughout the year. For example, the natural gas industry has its heavy sales in the winter months. In contrast, the beverage industry has its heavy sales in the summer months.

The problem of seasonality is related to the expense recognition principle in accounting. Generally, expenses are associated with the revenues they create. In a seasonal business, wide fluctuations in profits occur because off-season sales do not absorb the company’s fixed costs (for example, manufacturing, selling, and administrative costs that tend to remain fairly constant regardless of sales or production).

To illustrate why seasonality is a problem, assume the following information.

Selling price per unit	\$1
Annual sales for the period (projected and actual) 100,000 units @ \$1	\$100,000
Manufacturing costs	
Variable	10¢ per unit
Fixed	20¢ per unit or \$20,000 for the year
Nonmanufacturing costs	
Variable	10¢ per unit
Fixed	30¢ per unit or \$30,000 for the year

ILLUSTRATION 24-9

Data for Seasonality Example

Sales for four quarters and the year (projected and actual) were:

		<u>Percent of Sales</u>
1st Quarter	\$ 20,000	20%
2nd Quarter	5,000	5
3rd Quarter	10,000	10
4th Quarter	<u>65,000</u>	<u>65</u>
Total for the year	<u>\$100,000</u>	<u>100%</u>

ILLUSTRATION 24-10

Sales Data for Seasonality Example

⁹The estimated annual effective tax rate should reflect anticipated tax credits, foreign tax rates, percentage depletion, capital gains rates, and other available tax-planning alternatives.

¹⁰“Ordinary” income (or loss) refers to income (or loss) from operations or income (or loss) from continuing operations, when discontinued operations are involved.

Under the present accounting framework, the income statements for the quarters might be as shown in Illustration 24-11.

ILLUSTRATION 24-11

Interim Net Income for
Seasonal Business—
Discrete Approach

	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Year
Sales	\$20,000	\$ 5,000	\$10,000	\$65,000	\$100,000
Manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed ^a	(4,000)	(1,000)	(2,000)	(13,000)	(20,000)
	14,000	3,500	7,000	45,500	70,000
Nonmanufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed ^b	(7,500)	(7,500)	(7,500)	(7,500)	(30,000)
Net income	\$ 4,500	\$(4,500)	\$(1,500)	\$31,500	\$ 30,000

^aThe fixed manufacturing costs are inventoried, so that equal amounts of fixed costs do not appear during each quarter.
^bThe fixed nonmanufacturing costs are not inventoried, so equal amounts of fixed costs appear during each quarter.

An investor who uses the first quarter's results might be misled. If the first quarter's earnings are \$4,500, should this figure be multiplied by four to predict annual earnings of \$18,000? Or, if first-quarter sales of \$20,000 are 20 percent of the predicted sales for the year, would the net income for the year be \$22,500 ($\$4,500 \times 5$)? Both figures are obviously wrong, and after the second quarter's results occur, the investor may become even more confused.

The problem with the conventional approach is that the fixed nonmanufacturing costs are not charged in proportion to sales. Some enterprises have adopted a way of avoiding this problem by making all fixed nonmanufacturing costs follow the sales pattern, as shown in Illustration 24-12.

ILLUSTRATION 24-12

Interim Net Income for
Seasonal Business—
Integral Approach

	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Year
Sales	\$20,000	\$ 5,000	\$10,000	\$65,000	\$100,000
Manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed	(4,000)	(1,000)	(2,000)	(13,000)	(20,000)
	14,000	3,500	7,000	45,500	70,000
Nonmanufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed	(6,000)	(1,500)	(3,000)	(19,500)	(30,000)
Net income	\$ 6,000	\$ 1,500	\$ 3,000	\$19,500	\$ 30,000

This approach solves some of the seasonality problems of interim reporting. Sales in the first quarter are 20 percent of total sales for the year, and net income in the first quarter is 20 percent of total income. In this case, as in the previous example, the investor cannot rely on multiplying any given quarter by four but can use comparative data or rely on some estimate of sales in relation to income for a given period.

The greater the degree of seasonality experienced by a company, the greater the possibility of distortion. Because there are no definitive guidelines for handling such items as the fixed nonmanufacturing costs, variability in income can be substantial. To alleviate this problem, the profession recommends that companies subject to material seasonal variations disclose the seasonal nature of their business and consider

supplementing their interim reports with information for 12-month periods ended at the interim date for the current and preceding years.

The two illustrations highlight the difference between the **discrete** and **integral** approaches. Illustration 24-11 represents the discrete approach, in which the fixed non-manufacturing expenses are expensed as incurred. Illustration 24-12 shows the integral approach, in which expenses are charged to expense on the basis of some measure of activity.

INTERNATIONAL PERSPECTIVE

IFRS requires that interim financial statements use the discrete method, except for tax expenses.

EVOLVING ISSUE

IT'S FASTER BUT IS IT BETTER?

The profession has developed some rules for interim reporting, but much still has to be done. As yet, it is unclear whether the discrete or the integral method, or some combination of the two, will be settled on.

Discussion also persists about the independent auditor's involvement in interim reports. Many auditors are reluctant to express an opinion on interim financial information, arguing that the data are too tentative and subjective. On the other hand, more people are advocating some examination of interim reports. As a compromise, the SEC currently requires that auditors perform a review of interim financial information. Such a review, which is much more limited in its procedures than the annual audit, provides some assurance that the interim information appears to be in accord with GAAP. (See "Interim Financial Information," *Statement on Auditing Standards No. 101* (New York: AICPA, 2002).)

Analysts and investors want financial information as soon as possible, before it's old news. We may not be far from a continuous database system in which corporate financial records can be accessed via the Internet. Investors might be able to access a company's financial records whenever they wish and put the information in the format they need. Thus, they could learn about sales slippage, cost increases, or earnings changes as they happen, rather than waiting until after the quarter has ended.

A step in this direction is the SEC's mandate for companies to file their financial statements electronically with the SEC. The system, called EDGAR (electronic data gathering and retrieval), provides interested parties with computer access to financial information such as periodic filings, corporate prospectuses, and proxy materials.

The SEC also believes that timeliness of information is of extreme importance. First, the SEC has said that large public companies will have only 60 days to complete their annual reports, down from 90 days. Quarterly reports must be done within 40 days of the close of the quarter, instead of 45. In addition, corporate executives and shareholders with more than 10 percent of a company's outstanding stock now have just two days to disclose their sale or purchase of stock.

In a bid to increase Internet disclosure, the SEC encourages companies to post current, quarterly, and annual reports on their websites—or explain why they don't. The Internet postings would have to be made by the day the company submits the information to the SEC, rather than within 24 hours as current rules allow. A steady stream of information from the company to the investor could be very positive because it might alleviate management's continual concern with short-run interim numbers. Today, many contend that U.S. management is too oriented to the short-term. The truth of this statement is echoed by the words of the president of a large company who decided to retire early: "I wanted to look forward to a year made up of four seasons rather than four quarters."

While some are calling for the SEC to eliminate all interim reporting requirements in response to the negative consequences of short-termism, others are calling for a common sense approach, encouraging standard-setters to consider both costs and benefits. In their view, the FASB should be judicious when establishing disclosures that are mandatory every reporting period and that the hurdle should be high for such requirements. The FASB is considering such advice in its Disclosure Framework project (see the Evolving Issue box on page 1406).

AUDITOR'S AND MANAGEMENT'S REPORTS

Auditor's Report

Another important source of information, which is often overlooked, is the **auditor's report**. An **auditor** is an accounting professional who conducts an independent examination of a company's accounting data.

If satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance with generally accepted accounting

LEARNING OBJECTIVE 3

Identify the major disclosures in the auditor's report and understand management's responsibilities for the financial statements.

principles, the auditor expresses an **unqualified opinion**. An example is shown in Illustration 24-13.¹¹

ILLUSTRATION 24-13
Auditor's Report

Best Buy Co., Inc.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of Best Buy Co., Inc.:

We have audited the accompanying consolidated balance sheets of Best Buy Co., Inc. and subsidiaries (the "Company") as of January 31, 2015 and February 1, 2014 and the related consolidated statements of earnings, comprehensive income, cash flows, and changes in shareholders' equity for the 12 months ended January 31, 2015, the 12 months ended February 1, 2014 and the 11 months ended February 2, 2013. Our audits also included the financial statement schedule listed in the index at Item 15(a). These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Best Buy Co., Inc. and subsidiaries as of January 31, 2015 and February 1, 2014, and the results of their operations and their cash flows for the 12 months ended January 31, 2015, the 12 months ended February 1, 2014, and the 11 months ended February 2, 2013, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 1 to the consolidated financial statements, effective for fiscal year 2013, the Company changed its fiscal year end from the Saturday nearest the end of February to the Saturday nearest the end of January. As a result of this change, fiscal year 2013 was an 11-month transition period beginning March 4, 2012 through February 2, 2013.

We have also audited in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of January 31, 2015, based on the criteria established in *Internal Control—Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 31, 2015, expressed an unqualified opinion on the Company's internal control over financial reporting.

Deloitte & Touche LLP

Minneapolis, Minnesota
March 31, 2015

In preparing the report, the auditor follows these reporting standards.

1. The report states whether the financial statements are in accordance with generally accepted accounting principles.
2. The report identifies those circumstances in which the company has not consistently observed such principles in the current period in relation to the preceding period.

¹¹This auditor's report is in exact conformance with the specifications contained in "Reports on Audited Financial Statements," *Statement on Auditing Standards No. 58* (New York: AICPA, 1988). The last paragraph refers to the assessment of the company's internal controls, as required by the PCAOB.

3. Users are to regard the informative disclosures in the financial statements as reasonably adequate unless the report states otherwise.
4. The report contains either an expression of opinion regarding the financial statements taken as a whole or an assertion to the effect that an opinion cannot be expressed. When the auditor cannot express an overall opinion, the report should state the reasons. In all cases where an auditor's name is associated with financial statements, the report should contain a clear-cut indication of the character of the auditor's examination, if any, and the degree of responsibility being taken.

In most cases, the auditor issues a standard **unqualified** or **clean opinion**. That is, the auditor expresses the opinion that the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the entity in conformity with generally accepted accounting principles.

Certain circumstances, although they do not affect the auditor's unqualified opinion, may require the auditor to add an explanatory paragraph to the audit report. Some of the more important circumstances are as follows.

1. **Going concern.** The auditor must evaluate whether there is substantial doubt about the entity's **ability to continue as a going concern** for a reasonable period of time, taking into consideration all available information about the future. (The future is at least, but not limited to, 12 months from the end of the reporting period.) If substantial doubt exists about the company continuing as a going concern, the auditor adds to the report an explanatory note describing the potential problem. [7]¹²
2. **Lack of consistency.** If a company has changed accounting principles or the method of their application in a way that has a material effect on the comparability of its financial statements, the auditor should refer to the change in an explanatory paragraph of the report. Such an explanatory paragraph should identify the nature of the change and refer readers to the note in the financial statements that discusses the change in detail. The auditor's concurrence with a change is implicit unless the auditor takes exception to the change in expressing an opinion as to fair presentation in conformity with generally accepted accounting principles.
3. **Emphasis of a matter.** The auditor may wish to emphasize a matter regarding the financial statements but nevertheless intends to express an unqualified opinion. For example, the auditor may wish to emphasize that the entity is a component of a larger business enterprise or that it has had significant transactions with related parties. The auditor presents such explanatory information in a separate paragraph of the report.

In some situations, however, the auditor is required to express (1) a **qualified** opinion or (2) an **adverse** opinion, or (3) to **disclaim** an opinion.

A **qualified opinion** contains an exception to the standard opinion. Ordinarily, the exception is not of sufficient magnitude to invalidate the statements as a whole; if it were, an adverse opinion would be rendered. The usual circumstances in which the auditor may deviate from the standard unqualified short-form report on financial statements are as follows.

¹²Although auditors are responsible for assessing going concern uncertainties, until recently there has been no guidance in GAAP for management disclosures in this area. As a result, there has been diversity in when and how disclosures are included in the footnotes about going concern uncertainties. The FASB has recently issued guidance about required disclosures related to going concern. Under these new rules, companies must evaluate conditions or events that raise substantial doubt about the company's ability to continue as a going concern (defined as when it is probable that the company will be unable to meet its obligations as they become due within one year after the date that the financial statements are issued). When management concludes there is substantial doubt about the going concern assumption, this must be disclosed along with information to explain that conclusion. Management should also consider and disclose actions that, if implemented, will mitigate the conditions that could lead to a going concern disclosure.

1. The scope of the examination is limited or affected by conditions or restrictions.
2. The statements do not fairly present financial position or results of operations because of:
 - (a) Lack of conformity with generally accepted accounting principles and standards.
 - (b) Inadequate disclosure.

If confronted with one of the situations noted above, the auditor must offer a qualified opinion. A qualified opinion states that, except for the effects of the matter to which the qualification relates, the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows in conformity with generally accepted accounting principles.

Illustration 24-14 shows an example of an auditor's report with a qualified opinion. The auditor qualified the opinion because the company used an accounting principle at variance with generally accepted accounting principles.

ILLUSTRATION 24-14
Qualified Auditor's Report

Helio Company

Independent Auditor's Report

(Same first and second paragraphs as the standard report)

Helio Company has excluded, from property and debt in the accompanying balance sheets, certain lease obligations that, in our opinion, should be capitalized in order to conform with generally accepted accounting principles. If these lease obligations were capitalized, property would be increased by \$1,500,000 and \$1,300,000, long-term debt by \$1,400,000 and \$1,200,000, and retained earnings by \$100,000 and \$50,000 as of December 31, in the current and prior year, respectively. Additionally, net income would be decreased by \$40,000 and \$30,000 and earnings per share would be decreased by \$.06 and \$.04, respectively, for the years then ended.

In our opinion, except for the effects of not capitalizing certain lease obligations as discussed in the preceding paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of Helio Company, and the results of its operations and its cash flows for the years then ended in conformity with generally accepted accounting principles.

An **adverse opinion** is required in any report in which the exceptions to fair presentation are so material that in the independent auditor's judgment, a qualified opinion is not justified. In such a case, the financial statements taken as a whole are not presented in accordance with generally accepted accounting principles. Adverse opinions are rare, because most companies change their accounting to conform with GAAP. The SEC will not permit a company listed on an exchange to have an adverse opinion.

A **disclaimer of an opinion** is appropriate when the auditor has gathered so little information on the financial statements that no opinion can be expressed.

The audit report should provide useful information to the investor. One investment banker noted, "Probably the first item to check is the auditor's opinion to see whether or not it is a clean one—in conformity with generally accepted accounting principles—or is qualified in regard to differences between the auditor and company management in the accounting treatment of some major item, or in the outcome of some major litigation."

WHAT DO THE NUMBERS MEAN?

As we discussed in the opening story, financial disclosure is one of a number of institutional features that contribute to vibrant security markets. In fact, a recent study of disclosure and other mechanisms (such as civil lawsuits and criminal sanctions) found

HEART OF THE MATTER

that good disclosure is the most important contributor to a vibrant market. The study, which compared disclosure and other legal and regulatory elements across 49 countries, found that countries with the best disclosure laws have the biggest stock markets.

Countries with more successful market environments also tend to have regulations that make it relatively easy for private investors to sue corporations that provide bad information. That is, while criminal sanctions can be effective in some circumstances, disclosure and other legal and regulatory elements encouraging good disclosure are the most important determinants of highly liquid and deep securities markets.

These findings hold for nations in all stages of economic development, with particular importance for nations that are in the early stages of securities regulation. In addition, countries with fewer market protections likely will benefit the most from adoption of international standards for market regulation and disclosure. The lesson: Disclosure is good for your market.

Wysocki, "Global Accounting Convergence and the Potential Adoption of IFRS by the U.S. (Part I): Conceptual Underpinnings and Economic Analysis," *Accounting Horizons* (September 2010).

Management's Reports

Management's Discussion and Analysis

The SEC mandates inclusion of **management's discussion and analysis (MD&A)**. This section covers three financial aspects of an enterprise's business—liquidity, capital resources, and results of operations. In it, management highlights favorable or unfavorable trends and identifies significant events and uncertainties that affect these three factors. This approach obviously involves subjective estimates, opinions, and soft data. However, the SEC believes that the relevance of this information exceeds the potential lack of faithful representation.

Illustration 24-15 presents an excerpt from the MD&A section ("Business Risks" only) of **PepsiCo's** annual report.

PepsiCo, Inc.

MD&A Our business risks (in part)

Risk Management Framework

The achievement of our strategic and operating objectives will necessarily involve taking risks. Our risk management process is intended to ensure that risks are taken knowingly and purposefully. As such, we leverage an integrated risk management framework to identify, assess, prioritize, manage, monitor and communicate risks across the Company. This framework includes:

- The PepsiCo Risk Committee (PRC), comprised of a cross-functional, geographically diverse, senior management group which meets regularly to identify, assess, prioritize and address strategic and reputational risks;
- Division Risk Committees (DRCs), comprised of cross-functional senior management teams which meet regularly to identify, assess, prioritize and address division-specific operating risks;
- PepsiCo's Risk Management Office, which manages the overall risk management process, provides ongoing guidance, tools and analytical support to the PRC and the DRCs, identifies and assesses potential risks, and facilitates ongoing communication between the parties, as well as to PepsiCo's Audit Committee and Board of Directors;
- PepsiCo Corporate Audit, which evaluates the ongoing effectiveness of our key internal controls through periodic audit and review procedures; and
- PepsiCo's Compliance Department, which leads and coordinates our compliance policies and practices.

Market Risks

We are exposed to market risks arising from adverse changes in:

- commodity prices, affecting the cost of our raw materials and energy,
- foreign exchange rates, and
- interest rates.

In the normal course of business, we manage these risks through a variety of strategies, including productivity initiatives, global purchasing programs and hedging strategies. Ongoing productivity initiatives involve the identification and effective implementation of meaningful cost saving opportunities or efficiencies. Our global purchasing programs include fixed-price purchase orders and pricing agreements.

ILLUSTRATION 24-15

Management's Discussion and Analysis

The MD&A section also must provide information about the effects of inflation and changing prices, if they are material to financial statement trends. The SEC has not required specific numerical computations, and companies have provided little analysis on changing prices.

An additional disclosure provided in the MD&A of many companies is discussion of the company's critical accounting policies. This disclosure identifies accounting policies that require management to make subjective judgments regarding uncertainties, resulting in potentially significant effects on the financial results.¹³ For example, in its critical accounting policy disclosure, **PepsiCo** showed the impact on stock-based compensation expense in response to changes in estimated interest rates and stock return volatility. Through this voluntary disclosure, companies can expand on the information contained in the notes to the financial statements to indicate the sensitivity of the financial results to accounting policy judgments.

Management's Responsibilities for Financial Statements

The Sarbanes-Oxley Act requires the SEC to develop guidelines for *all* publicly traded companies to report on management's responsibilities for, and assessment of, the internal control system. An example of the type of disclosure that public companies are now making is shown in Illustration 24-16.¹⁴

LEARNING OBJECTIVE 4

Identify reporting issues related to financial forecasts and fraudulent financial reporting.

CURRENT REPORTING ISSUES

Reporting on Financial Forecasts and Projections

In recent years, the investing public's demand for more and better information has focused on disclosure of corporate expectations for the future.¹⁵ These disclosures take one of two forms.¹⁶

- **Financial forecasts.** A **financial forecast** is a set of prospective financial statements that present, to the best of the responsible party's knowledge and belief, a company's expected financial position, results of operations, and cash flows. The responsible party bases a financial forecast on conditions it expects to exist and the course of action it expects to take.
- **Financial projections.** **Financial projections** are prospective financial statements that present, to the best of the responsible party's knowledge and belief, given one or more *hypothetical assumptions*, an entity's expected financial position, results of operations, and cash flows. The responsible party bases a financial projection on conditions it expects *would* exist and the course of action it expects *would* be taken, given one or more hypothetical assumptions.

¹³See *Cautionary Advice Regarding Disclosure about Critical Accounting Policies*, Release Nos. 33-8040; 34-45149; FR-60 (Washington, D.C.: SEC); and *Proposed Rule: Disclosure in Management's Discussion and Analysis about the Application of Critical Accounting Policies*, Release Nos. 33-8098; 34-45907; International Series Release No. 1258; File No. S7-16-02 (Washington, D.C.: SEC).

¹⁴As indicated in this disclosure, management is responsible for preparing the financial statements and establishing and maintaining an effective system of internal controls. The auditor provides an independent assessment of whether the financial statements are prepared in accordance with GAAP, and for public companies, whether the internal controls are effective (see the audit opinion in Illustration 24-13 on page 1424).

¹⁵Some areas in which companies are using financial information about the future are equipment lease-versus-buy analysis, analysis of a company's ability to successfully enter new markets, and examination of merger and acquisition opportunities. In addition, companies also prepare forecasts and projections for use by third parties in public offering documents (requiring financial forecasts), tax-oriented investments, and financial feasibility studies. Use of forward-looking data has been enhanced by the increased capability of microcomputers to analyze, compare, and manipulate large quantities of data.

¹⁶"Financial Forecasts and Projections" and "Guide for Prospective Financial Information," *Codification of Statements on Standards for Attestation Engagements* (New York: AICPA 2006), paras. 3.04 and 3.05.

Home Depot

Management's Responsibility for Financial Statements

The financial statements presented in this Annual Report have been prepared with integrity and objectivity and are the responsibility of the management of The Home Depot, Inc. These financial statements have been prepared in conformity with U.S. generally accepted accounting principles and properly reflect certain estimates and judgments based upon the best available information.

The financial statements of the Company have been audited by KPMG LLP, an independent registered public accounting firm. Their accompanying report is based upon an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States).

The Audit Committee of the Board of Directors, consisting solely of independent directors, meets five times a year with the independent registered public accounting firm, the internal auditors and representatives of management to discuss auditing and financial reporting matters. In addition, a telephonic meeting is held prior to each quarterly earnings release. The Audit Committee retains the independent registered public accounting firm and regularly reviews the internal accounting controls, the activities of the independent registered public accounting firm and internal auditors and the financial condition of the Company. Both the Company's independent registered public accounting firm and the internal auditors have free access to the Audit Committee.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Rule 13a-15(f) promulgated under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting as of February 1, 2015 based on the framework in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on our evaluation, our management concluded that our internal control over financial reporting was effective as of February 1, 2015 in providing reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. generally accepted accounting principles. The effectiveness of our internal control over financial reporting as of February 1, 2015 has been audited by KPMG LLP, an independent registered public accounting firm, as stated in their report which is included on page 30 in this Form 10-K.

ILLUSTRATION 24-16

Report on Management's Responsibilities

The difference between a financial forecast and a financial projection is clear-cut. A forecast provides information on what is **expected** to happen, whereas a projection provides information on what **might** take place but is not necessarily expected to happen.

Whether companies should be required to provide financial forecasts is the subject of intensive discussion with journalists, corporate executives, the SEC, financial analysts, accountants, and others. Predictably, there are strong arguments on either side. Listed below are some of the arguments.

Arguments for requiring published forecasts:

1. Investment decisions are based on future expectations. Therefore, information about the future facilitates better decisions.
2. Companies already circulate forecasts informally. This situation should be regulated to ensure that the forecasts are available to all investors.
3. Circumstances change so rapidly that historical information is no longer adequate for prediction.

Arguments against requiring published forecasts:

1. No one can foretell the future. Therefore, forecasts will inevitably be wrong. Worse, they may mislead, if they convey an impression of precision about the future.

UNDERLYING CONCEPTS

The profession indicates that the legal environment discourages companies from disclosing forward-looking information. Companies should not have to expand reporting of forward-looking information unless there are more effective deterrents to unwarranted litigation.

2. Companies may strive only to meet their published forecasts, thereby failing to produce results that are in the stockholders' best interest.
3. If forecasts prove inaccurate, there will be recriminations and probably legal actions.¹⁷
4. Disclosure of forecasts will be detrimental to organizations, because forecasts will inform competitors (foreign and domestic) as well as investors.

The AICPA has issued a statement on standards for accountants' services on prospective financial information. This statement establishes guidelines for the preparation and presentation of financial forecasts and projections.¹⁸ It requires accountants to provide (1) a summary of significant assumptions used in the forecast or projection and (2) guidelines for minimum presentation.

To encourage management to disclose prospective financial information, the SEC has a **safe harbor rule**. It provides protection to a company that presents an erroneous forecast, as long as the company prepared the forecast on a reasonable basis and disclosed it in good faith.¹⁹ However, many companies note that the safe harbor rule does not work in practice, since it does not cover oral statements, nor has it kept them from investor lawsuits.

WHAT DO THE NUMBERS MEAN?**GLOBAL FORECASTS**

Great Britain permits financial forecasts, and the results have been fairly successful. Some significant differences do exist between the English and the U.S. business and legal environments. The British system, for example, does not permit litigation on forecasted information, and the solicitor (lawyer) is not permitted to work on a contingent-fee basis.

But such differences probably could be overcome if influential interests in this country cooperated to produce an atmosphere conducive to quality forecasting. A typical British forecast adapted from a construction company's report to support a public offering of stock is as follows.

Profits have grown substantially over the past 10 years and directors are confident of being able to continue this expansion. . . . While the rate of expansion will be dependent on the level of economic activity in Ireland and England, the group is well structured to avail itself of opportunities as they arise, particularly in the field of property development, which is expected to play an increasingly important role in the group's future expansion.

Profits before taxation for the half year ended 30th June were 402,000 pounds. On the basis of trading experiences since that date and the present level of sales and completions, the directors expect that in the absence of unforeseen circumstances, the group's profits before taxation for the year to 31st December will be not less than 960,000 pounds.

No dividends will be paid in respect of the current year. In a full financial year, on the basis of above forecasts (not including full year profits) it would be the intention of the board, assuming current rates of tax, to recommend dividends totaling 40% (of after-tax profits), which will be payable in the next two years.

A general narrative-type forecast issued by a U.S. corporation might appear as follows.

On the basis of promotions planned by the company for the second half of the fiscal year, net earnings for that period are expected to be approximately the same as those for the first half of the fiscal year, with net earnings for the third quarter expected to make the predominant contribution to net earnings for the second half of the year.

As indicated, the U.S. version is much less specific in its forecasted information.

Source: See "A Case for Forecasting—The British Have Tried It and Find That It Works," *World* (New York: Peat, Marwick, Mitchell & Co., Autumn 1978), pp. 10–13. In a recent survey, U.K. companies remain stubbornly backward-looking. Just 5 percent of FTSE 100 companies address the future of the business in their discussion and analysis. See PricewaterhouseCoopers, "Guide to Forward-looking Information: Don't Fear the Future" (2006).

¹⁷The issue is serious. Over a recent three-year period, 8 percent of the companies on the NYSE were sued because of an alleged lack of financial disclosure. Companies complain that they are subject to lawsuits whenever the stock price drops. And as one executive noted, "You can even be sued if the stock price goes up—because you did not disclose the good news fast enough."

¹⁸*Op. cit.*, par. 1.02.

¹⁹"Safe-Harbor Rule for Projections," *Release No. 5993* (Washington, D.C.: SEC, 1979). The Private Securities Litigation Reform Act of 1995 recognizes that some information that is useful to investors is inherently subject to less certainty or reliability than other information. By providing safe harbor for forward-looking statements, Congress has sought to facilitate access to this information by investors.

Questions of Liability

What happens if a company does not meet its forecasts? Can the company and the auditor be sued? If a company, for example, projects an earnings increase of 15 percent and achieves only 5 percent, should stockholders be permitted to have some judicial recourse against the company?

One court case involving **Monsanto Chemical Corporation** set a precedent. In this case, Monsanto predicted that sales would increase 8 to 9 percent and that earnings would rise 4 to 5 percent. In the last part of the year, the demand for Monsanto's products dropped as a result of a business turndown. Instead of increasing, the company's earnings declined. Investors sued the company because the projected earnings figure was erroneous, but a judge dismissed the suit because the forecasts were the best estimates of qualified people whose intents were honest.

As indicated earlier, the SEC's safe harbor rules are intended to protect companies that provide good-faith projections. However, much concern exists as to how the SEC and the courts will interpret such terms as "good faith" and "reasonable assumptions" when erroneous forecasts mislead users of this information.

Internet Financial Reporting

Most companies now use the power and reach of the Internet to provide more useful information to financial statement readers. All large companies have Internet sites, and a large proportion of companies' websites contain links to their financial statements and other disclosures. The popularity of such reporting is not surprising since it reduces the companies' costs of printing and disseminating paper reports.

Does Internet financial reporting improve the usefulness of a company's financial reports? Yes, in several ways. First, dissemination of reports via the Web allows firms **to communicate more easily and quickly with users** than do traditional paper reports. In addition, **Internet reporting allows users to take advantage of tools** such as search engines and hyperlinks to quickly find information about the firm and to download the information for analysis. Finally, **Internet reporting can help make financial reports more relevant** by allowing companies to report expanded disaggregated data and more timely data than is possible through paper-based reporting. For example, some companies voluntarily report weekly sales data and segment operating data on their websites.

Given the widespread use of the Internet by investors and creditors, it is not surprising that organizations are developing new technologies and standards to further enable and enhance Internet financial reporting. An example is the established use of eXtensible Business Reporting Language (XBRL). **XBRL** is a computer language adapted from the code of the Internet. It "tags" accounting data to correspond to financial reporting items that are reported in the balance sheet, income statement, and the cash flow statement. Once tagged, any company's XBRL data can be easily processed using spreadsheets and other computer programs. In fact, the SEC is phasing in requirements for all companies and mutual funds to prepare their financial reports using XBRL, thereby allowing users to more easily search a company's reports, extract and analyze data, and perform financial comparisons within industries.²⁰

To complement the implementation of XBRL use, the SEC has supplemented its EDGAR database with a system called IDEA (short for Interactive Data Electronic Applications). This enhancement of EDGAR marks the SEC's transition from collecting forms and documents to making the information itself freely available to investors in a timely form they can readily use. With IDEA, investors are able to quickly collate

²⁰See *SEC Interactive Data Rules for Operating Companies* (<http://www.sec.gov/rules/final/2009/33-9002.pdf>); and C. Twarowski, "Financial Data 'on Steroids,'" *Washington Post* (August 19, 2008), p. D01. The FASB (and IASB) have collaborated to implement XBRL with their standards. See, for example, <http://www.fasb.org/home>; click on Taxonomy (XBRL).

information from thousands of companies and forms and create reports and analyses on the fly, in any way they choose. IDEA has opened the door for both the SEC and investors to the new world of financial disclosure in interactive data (XBRL) format.²¹

Fraudulent Financial Reporting

Economic crime is on the rise around the world. A recent global survey of over 3,000 executives from 54 countries documented the types of economic crimes, as shown in Illustration 24-17 and Illustration 24-18 (page 1433).

ILLUSTRATION 24-17
Types of Economic Crime

As indicated, a wide range of economic crimes are reported and, in general, are on the increase. As shown in Illustration 24-18, while the trend for the top three areas is stable, accounting fraud consistently is in the top three.

Fraudulent financial reporting is defined as “intentional or reckless conduct, whether act or omission, that results in materially misleading financial statements.”²² Fraudulent reporting can involve gross and deliberate distortion of corporate records (such as inventory count tags), or misapplication of accounting principles (failure to disclose material transactions). Although frauds are unusual, recent events involving such well-known companies as **Enron**, **WorldCom**, **Adelphia**, and **Tyco** indicate that more must be done to address this issue.

²¹See <http://www.sec.gov/edgar/aboutedgar.htm>. The SEC has implemented other regulations to ensure that investors get high-quality disclosures. For example, as discussed in Chapter 4, the SEC was concerned that companies may use pro forma reporting to deflect investor attention from bad news. In response, the SEC issued Regulation G, which requires companies to reconcile non-GAAP financial measures to GAAP. This regulation provides investors with a roadmap to analyze adjustments companies make to their GAAP numbers to arrive at pro forma results. [See SEC Regulation G, “Conditions for Use of Non-GAAP Financial Measures,” Release No. 33-8176 (March 28, 2003).] Regulation FD (Release Nos. 33-7881) was issued in 2000 to address the concern that some analysts were receiving information sooner than the general public (e.g., during conference calls with analysts when earnings releases were discussed). Regulation FD requires that when relevant information is released, all have equal access to it.

²²“Report of the National Commission on Fraudulent Financial Reporting” (Washington, D.C., 1987), page 2. Unintentional errors as well as corporate improprieties (such as tax fraud, employee embezzlements, and so on) which do not cause the financial statements to be misleading are excluded from the definition of fraudulent financial reporting.

ILLUSTRATION 24-18
Trends in Reported Fraud

Causes of Fraudulent Financial Reporting

Fraudulent financial reporting usually occurs because of conditions in a company's internal or external environment. Influences in the **internal environment** relate to poor internal control systems, management's poor attitude toward ethics, or perhaps a company's liquidity or profitability. Those in the **external environment** may relate to industry conditions, overall business environment, or legal and regulatory considerations.

General incentives for fraudulent financial reporting vary. Common ones are the desire to obtain a higher stock price, to avoid default on a loan covenant, or to make a personal gain of some type (additional compensation, promotion). Situational pressures on the company or an individual manager also may lead to fraudulent financial reporting. Examples of these situational pressures include the following.

- *Sudden decreases in revenue or market share* for a single company or an entire industry.
- *Unrealistic budget pressures* may occur when headquarters arbitrarily determines profit objectives (particularly for short-term results) and budgets without taking actual conditions into account.
- *Financial pressure resulting from bonus plans* that depend on short-term economic performance. This pressure is particularly acute when the bonus is a significant component of the individual's total compensation.

Opportunities for fraudulent financial reporting are present in circumstances when the fraud is easy to commit and when detection is difficult. Frequently, these opportunities arise from:

1. *The absence of a board of directors or audit committee* that vigilantly oversees the financial reporting process.
2. *Weak or nonexistent internal accounting controls.* This situation can occur, for example, when a company's revenue system is overloaded as a result of a rapid expansion of sales, an acquisition of a new division, or the entry into a new, unfamiliar line of business.
3. *Unusual or complex transactions* such as the consolidation of two companies, the divestiture or closing of a specific operation, and the purchase and sale of derivative instruments.

4. **Accounting estimates requiring significant subjective judgment** by company management, such as the allowance for loan losses and the estimated liability for warranty expense.
5. **Ineffective internal audit staffs** resulting from inadequate staff size and severely limited audit scope.

A weak corporate ethical climate contributes to these situations. Opportunities for fraudulent financial reporting also increase dramatically when the accounting principles followed in reporting transactions are nonexistent, evolving, or subject to varying interpretations.²³

The AICPA has issued numerous auditing standards in response to concerns of the accounting profession, the media, and the public.²⁴ For example, the standard on fraudulent financial reporting “raises the bar” on the performance of financial statement audits by explicitly requiring auditors to assess the risk of material financial misstatement due to fraud.²⁵ As indicated earlier, the Sarbanes-Oxley Act now raises the penalty substantially for executives who are involved in fraudulent financial reporting.

WHAT DO THE NUMBERS MEAN?

As we discussed in Chapter 1 and throughout the textbook, IFRS is gaining popularity around the world. The U.S. Securities and Exchange Commission is still studying whether and how to incorporate IFRS in the accounting rules used by publicly traded companies in the United States. There is some debate on U.S. readiness to make the switch. For example, there are several areas in which the FASB and the IASB must iron out a number of technical accounting issues before they reach a substantially converged set of accounting standards. Here is a list of six important areas yet to be converged.

1. **Error correction.** According to *IAS 8*, it's not always necessary to retrospectively restate financial results when a company corrects errors, especially if the adjustment is impractical or too costly. GAAP, on the other hand, requires restatements in many error-correction cases.
2. **Death of LIFO.** Last-in, first-out (LIFO) inventory accounting is prohibited under *IAS 2*, so any U.S. company using the method will have to abandon it (and the tax benefits) and move to another methodology. Although LIFO is permitted under GAAP, the repeal of LIFO for tax purposes is an ongoing debate.
3. **Reversal of impairments.** *IAS 36* permits companies to reverse impairment losses up to the amount of the original

DISCLOSURE OVERLOAD

impairment when the reason for the charge decreases or no longer exists. However, GAAP bans reversal.

4. **PP&E revaluation.** *IAS 16* allows for the revaluation of property, plant, and equipment, but the entire asset class must be revalued. That means a company can choose to use the revaluation model if the asset class's fair value can be measured reliably. But, it must choose to use one model or the other; both cannot be used at the same time. GAAP does not allow revaluation.
5. **Component depreciation.** Also under *IAS 16*, companies must recognize and depreciate equipment components separately if the components can be physically separated from the asset and have different useful life spans. In practical terms, that means controllers will have to rely on the operations side of the business to help assess equipment components. GAAP allows component depreciation, but it is not required.
6. **Development costs.** Based on *IAS 38*, companies are permitted to capitalize development costs as long as they meet six criteria. However, research costs are still expensed. GAAP requires that all R&D costs be charged to expense when incurred.
7. **Sustainability reporting.** Such reporting on environmental, social, and corporate governance (ESG) issues is not

²³The discussion in this section is based on the Report of the National Commission on Fraudulent Financial Reporting, pp. 23–24 (2004). See also “2012 Report to the Nation on Occupational Fraud and Abuse, Association of Certified Fraud Examiners” (http://www.acfe.com/uploadedFiles/ACFE_Website/Content/rttn/2012-report-to-nations.pdf), for fraudulent financial reporting causes and consequences.

²⁴Because the profession believes that the role of the auditor is not well understood outside the profession, much attention has been focused on the expectation gap. The **expectation gap** is the gap between (1) the expectation of financial statement users concerning the level of assurance they believe the independent auditor provides, and (2) the assurance that the independent auditor actually does provide under generally accepted auditing standards.

²⁵“Consideration of Fraud in a Financial Statement Audit,” *Statement on Auditing Standards No. 99* (New York: AICPA, 2002).

required by GAAP or IFRS. However, a growing number of companies (especially those who use IFRS) are voluntarily disclosing supplementary Information on ESG. While much of this information is nonfinancial, the effects of sustainability efforts do have financial consequences—about which investors want to know. As discussed in Chapter 12, ESG reporting standards are coming online and if companies continue to get on the sustainability reporting bandwagon, such reporting will add to the heft of the annual reporting package.

Some are already debating what will happen if and when U.S. companies adopt these new standards. It is almost

Sources: Marie Leone, “GAAP and IFRS: Six Degrees of Separation,” *CFO.com* (June 30, 2010); and E. Harrell, “How Accounting Can Help Build a Sustainable Economy,” *Harvard Business Review* (December 14, 2015).

certain that expanded disclosure will be needed to help users navigate accounting reports upon adoption of IFRS. As one accounting analyst remarked, “Get ready for an avalanche of footnotes.” Since using IFRS requires more judgment than using GAAP, two to three times as many footnotes will be needed to explain the rationales for accounting approaches. So while principles-based standards should promote more comparability, they require investors to dig into the disclosures in the footnotes.

Criteria for Making Accounting and Reporting Choices

Throughout this textbook, we have stressed the need to provide information that is useful to predict the amounts, timing, and uncertainty of future cash flows. To achieve this objective, companies must make judicious choices between alternative accounting concepts, methods, and means of disclosure. You are probably surprised by the large number of choices that exist among acceptable alternatives.

You should recognize, however, as indicated in Chapter 1, that accounting is greatly influenced by its environment. It does not exist in a vacuum. Therefore, it is unrealistic to assume that the profession can entirely eliminate alternative presentations of certain transactions and events. Nevertheless, we are hopeful that the profession, by adhering to the conceptual framework, will be able to focus on the needs of financial statement users and eliminate diversity where appropriate. The SEC’s and FASB’s projects on principles-based standards and disclosure effectiveness are directed at these very issues. They seek to develop guidance that will result in accounting and financial reporting that reflects the economic substance of the transactions, not the desired financial result of management. The profession must continue its efforts to develop a sound foundation upon which to build financial standards and practice. As Aristotle said, “The correct beginning is more than half the whole.”

UNDERLYING CONCEPTS

The FASB concept statements on the objective of financial reporting, elements of financial statements, qualitative characteristics of accounting information, and recognition and measurement are important steps in the right direction.

YOU WILL WANT TO READ THE IFRS INSIGHTS ON PAGES 1461–1468

For discussion of IFRS related to disclosure.

What would be important to you in studying a company’s financial statements? The answer depends on your particular interest—whether you are a creditor, stockholder, potential investor, manager, government agency, or labor leader. For example, **short-term creditors** such as banks are primarily interested in the ability of the firm to pay its currently maturing obligations. In that case, you would examine the current assets and their relation to short-term liabilities to evaluate the short-run solvency of the firm.

Bondholders, on the other hand, look more to long-term indicators, such as the enterprise’s capital structure, past and projected earnings, and changes in financial position. **Stockholders**, present or prospective, also are interested in many of the features

LEARNING OBJECTIVE *5

Understand the approach to financial statement analysis.

considered by a long-term creditor. As a stockholder, you would focus on the earnings picture, because changes in it greatly affect the market price of your investment. You also would be concerned with the financial position of the company, because it affects indirectly the stability of earnings.

The **managers** of a company are concerned about the composition of its capital structure and about the changes and trends in earnings. This financial information has a direct influence on the type, amount, and cost of external financing that the company can obtain. In addition, the company managers find financial information useful on a day-to-day operating basis in such areas as capital budgeting, break-even analysis, variance analysis, gross margin analysis, and for internal control purposes.

PERSPECTIVE ON FINANCIAL STATEMENT ANALYSIS

Readers of financial statements can gather information by examining relationships between items on the statements and identifying trends in these relationships. The relationships are expressed numerically in ratios and percentages, and trends are identified through comparative analysis.

A problem with learning how to analyze statements is that the means may become an end in itself. Analysts could identify and calculate thousands of possible relationships and trends. If one knows only how to calculate ratios and trends without understanding how such information can be used, little is accomplished. Therefore, a logical approach to financial statement analysis is necessary, consisting of the following steps.

1. **Know the questions for which you want to find answers.** As indicated earlier, various groups have different types of interest in a company.
2. **Know the questions that particular ratios and comparisons are able to help answer.** These will be discussed in this appendix.
3. **Match 1 and 2 above.** By such a matching, the statement analysis will have a logical direction and purpose.

Several caveats must be mentioned. **Financial statements report on the past.** Thus, analysis of these data is an examination of the past. When using such information in a decision-making (future-oriented) process, analysts assume that the past is a reasonable basis for predicting the future. This is usually a reasonable approach, but its limitations should be recognized.

Also, ratio and trend analyses will help identify a company's present strengths and weaknesses. They may serve as "red flags" indicating problem areas. In many cases, however, such analyses will not reveal **why** things are as they are. Finding answers about "why" usually requires an in-depth analysis and an awareness of many factors about a company that are not reported in the financial statements.

Another caveat is that a **single ratio by itself is not likely to be very useful.** For example, analysts may generally view a current ratio of 2 to 1 (current assets are twice current liabilities) as satisfactory. However, if the industry average is 3 to 1, such a conclusion may be invalid. Even given this industry average, one may conclude that the particular company is doing well if one knows the previous year's ratio was 1.5 to 1. Consequently, to derive meaning from ratios, analysts need some standard against which to compare them. Such a standard may come from industry averages, past years' amounts, a particular competitor, or planned levels.

Finally, **awareness of the limitations of accounting numbers used in an analysis is important.** We will discuss some of these limitations and their consequences later in this appendix.

UNDERLYING CONCEPTS

Because financial statements report on the past, they emphasize the *qualitative characteristic of feedback value*. This feedback value is useful because it can be used to better achieve the *qualitative characteristic of predictive value*.

INTERNATIONAL PERSPECTIVE

Some companies outside the United States provide "convenience" financial statements for U.S. readers. These financial statements have been translated into English, and they may also translate the currency units into U.S. dollars. However, the statements are *not restated* using U.S. accounting principles; financial statement analysis needs to take this fact into account.

RATIO ANALYSIS

In analyzing financial statement data, analysts use various devices to bring out the comparative and relative significance of the financial information presented. These devices include ratio analysis, comparative analysis, percentage analysis, and examination of related data. No one device is more useful than another. Every situation is different, and analysts often obtain the needed answers only upon close examination of the interrelationships among all the data provided. Ratio analysis is the starting point. Ratios can be classified as follows.

LEARNING OBJECTIVE *6

Identify major analytic ratios and describe their calculation.

MAJOR TYPES OF RATIOS

LIQUIDITY RATIOS. Measures of the company's short-run ability to pay its maturing obligations.

ACTIVITY RATIOS. Measures of how effectively the company is using the assets employed.

PROFITABILITY RATIOS. Measures of the degree of success or failure of a given company or division for a given period of time.

COVERAGE RATIOS. Measures of the degree of protection for long-term creditors and investors.²⁶

We have integrated discussions and illustrations about the computation and use of these financial ratios throughout this book. Illustration 24A-1 (page 1438) summarizes all of the ratios presented in this textbook and identifies the specific chapters that present this material.

Additional coverage of these ratios, accompanied by assignment material, is available online. This supplemental coverage takes the form of a comprehensive case adapted from the annual report of a large international chemical company that we have disguised under the name of Anetek Chemical Corporation.

Limitations of Ratio Analysis

The reader of financial statements must understand the basic limitations associated with ratio analysis. As analytical tools, ratios are attractive because they are simple and convenient. But too frequently, decision-makers base their decisions on only these simple computations. The ratios are only as good as the data upon which they are based and the information with which they are compared.

One important limitation of ratios is that they generally are **based on historical cost, which can lead to distortions in measuring performance**. Inaccurate assessments of the enterprise's financial condition and performance can result from failing to incorporate fair value information.

Also, investors must remember that **where estimated items (such as depreciation and amortization) are significant, income ratios lose some of their credibility**. For example, income recognized before the termination of a company's life is an approximation. In analyzing the income statement, users should be aware of the uncertainty surrounding the computation of net income.

LEARNING OBJECTIVE *7

Explain the limitations of ratio analysis.

²⁶ Some analysts use other terms to categorize these ratios. For example, liquidity ratios are sometimes referred to as *solvency* ratios; activity ratios as *turnover* or *efficiency* ratios; and coverage ratios as *leverage* or *capital structure* ratios.

ILLUSTRATION 24A-1

Summary of Financial Ratios

SUMMARY OF RATIOS PRESENTED IN EARLIER CHAPTERS		
Ratio	Formula for Computation	Reference
I. Liquidity		
1. Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$	Chapter 13, p. 687
2. Quick or acid-test ratio	$\frac{\text{Cash} + \text{Short-term investments} + \text{Accounts receivable (net)}}{\text{Current liabilities}}$	Chapter 13, p. 688
3. Current cash debt coverage	$\frac{\text{Net cash provided by operating activities}}{\text{Average current liabilities}}$	Chapter 5, p. 222
II. Activity		
4. Accounts receivable turnover	$\frac{\text{Net sales}}{\text{Average net accounts receivable}}$	Chapter 7, p. 351
5. Inventory turnover	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$	Chapter 9, p. 466
6. Asset turnover	$\frac{\text{Net sales}}{\text{Average total assets}}$	Chapter 11, p. 575
III. Profitability		
7. Profit margin on sales	$\frac{\text{Net income}}{\text{Net sales}}$	Chapter 11, p. 576
8. Return on assets	$\frac{\text{Net income}}{\text{Average total assets}}$	Chapter 11, p. 576
9. Return on common stockholders' equity	$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Average common stockholders' equity}}$	Chapter 15, p. 803
10. Earnings per share	$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average common shares outstanding}}$	Chapter 16, p. 852
11. Payout ratio	$\frac{\text{Cash dividends}}{\text{Net income}}$	Chapter 15, p. 803
IV. Coverage		
12. Debt to assets ratio	$\frac{\text{Total liabilities}}{\text{Total assets}}$	Chapter 14, p. 742
13. Times interest earned	$\frac{\text{Net income} + \text{Interest expense} + \text{Income tax expense}}{\text{Interest expense}}$	Chapter 14, p. 743
14. Cash debt coverage	$\frac{\text{Net cash provided by operating activities}}{\text{Average total liabilities}}$	Chapter 5, p. 222
15. Book value per share	$\frac{\text{Common stockholders' equity}}{\text{Outstanding shares}}$	Chapter 15, p. 804

As one writer aptly noted, "The physicist has long since conceded that the location of an electron is best expressed by a probability curve. Surely an abstraction like earnings per share is even more subject to the rules of probability and risk."²⁷

Probably the greatest limitation of ratio analysis is the **difficult problem of achieving comparability among firms in a given industry**. Achieving comparability requires that the analyst (1) identify basic differences in companies' accounting principles and

²⁷Richard E. Cheney, "How Dependable Is the Bottom Line?" *The Financial Executive* (January 1971), p. 12.

procedures, and (2) adjust the balances to achieve comparability. Basic differences in accounting usually involve one of the following areas.

1. Inventory valuation (FIFO, LIFO, average-cost).
2. Depreciation methods, particularly the use of straight-line versus accelerated depreciation.
3. Capitalization versus expensing of certain costs.
4. Capitalization of leases versus noncapitalization.
5. Investments in common stock carried at equity versus fair value.
6. Differing treatments of postretirement benefit costs.
7. Questionable practices of defining discontinued operations and impairments.

The use of these different alternatives can make a significant difference in the ratios computed. For example, at one time **Anheuser-Busch InBev** noted that if it had used average-cost for inventory valuation instead of LIFO, inventories would have increased approximately \$33,000,000. Such an increase would have a substantive impact on the current ratio. Several studies have analyzed the impact of different accounting methods on financial statement analysis. The differences in income that can develop are staggering in some cases. Investors must be aware of the potential pitfalls if they are to be able to make the proper adjustments.²⁸

Finally, analysts should recognize that a **substantial amount of important information** is not included in a company's financial statements. Events involving such things as industry changes, management changes, competitors' actions, technological developments, government actions, and union activities are often critical to a company's successful operation. These events occur continuously, and information about them must come from careful analysis of financial reports in the media and other sources. Indeed many argue, in what is known as the **efficient-market hypothesis**, that financial statements contain "no surprises" to those engaged in market activities. They contend that the effect of these events is known in the marketplace—and the price of the company's stock adjusts accordingly—well before the issuance of such reports.

UNDERLYING CONCEPTS

Consistency and comparability are important concepts for financial statement analysis. If the principles and assumptions used to prepare the financial statements are continually changing, accurate assessments of a company's progress become difficult.

COMPARATIVE ANALYSIS

Comparative analysis presents the same information for two or more different dates or periods, so that like items may be compared. Ratio analysis provides only a single snapshot, for one given point or period in time. In a comparative analysis, an investment analyst can concentrate on a given item and determine whether it appears to be growing or diminishing year by year and the proportion of such change to related items. Generally, companies present comparative financial statements. They typically include two years of balance sheet information and three years of income statement information.

In addition, many companies include in their annual reports five- or ten-year summaries of pertinent data that permit readers to examine and analyze trends. As indicated in GAAP, "the presentation of comparative financial statements in annual and other reports enhances the usefulness of such reports and brings out more clearly the nature and trends of current changes affecting the enterprise." Illustration 24A-2 (on page 1440) presents a five-year condensed statement, with additional supporting data, of Anetek Chemical Corporation.

LEARNING OBJECTIVE *8

Describe techniques of comparative analysis.

²⁸See, for example, Eugene A. Imhoff, Jr., Robert C. Lipe, and David W. Wright, "Operating Leases: Impact of Constructive Capitalization," *Accounting Horizons* (March 1991).

ILLUSTRATION 24A-2Condensed Comparative
Financial Information**LEARNING OBJECTIVE *9**Describe techniques of
percentage analysis.**PERCENTAGE (COMMON-SIZE) ANALYSIS**

Analysts also use percentage analysis to help them evaluate and compare companies. **Percentage analysis** consists of reducing a series of related amounts to a series of percentages of a given base. For example, analysts frequently express all items in an income statement as a percentage of sales or sometimes as a percentage of cost of goods sold. They may analyze a balance sheet on the basis of total assets. Percentage analysis facilitates comparison and is helpful in evaluating the relative size of items or the relative change in items. A conversion of absolute dollar amounts to percentages may also facilitate comparison between companies of different size.

Illustration 24A-3 shows a comparative analysis of the expense section of Anetek for the last two years.

This approach, normally called **horizontal analysis**, indicates the proportionate change over a period of time. It is especially useful in evaluating trends, because absolute changes are often deceiving.

Another comparative approach, called **vertical analysis**, is the proportional expression of each financial statement item in a given period to a base figure.

ANETEK CHEMICAL CORPORATION

Total revenue	1,675.0	100
Less:		
Cost of sales	1,000.0	60
Depreciation and amortization	150.0	9
Selling and administrative expenses	225.0	13
Interest expense	50.0	3
Income taxes	100.0	6
Total expenses	1,525.0	91
Net income	\$ 150.0	9%

ILLUSTRATION 24A-4

Vertical Percentage Analysis

Vertical analysis is frequently called **common-size analysis** because it reduces all of the statement items to a "common size." That is, all of the elements within each statement are expressed in percentages of some common number and always add up to 100 percent. Common-size (percentage) analysis reveals the composition of each of the financial statements.

In the analysis of the balance sheet, common-size analysis answers such questions as: What percentage of the capital structure is stockholders' equity, current liabilities, and long-term debt? What is the mix of assets (percentage-wise) with which the company has chosen to conduct business? What percentage of current assets is in inventory, receivables, and so forth?

Common-size analysis of the income statement typically relates each item to sales. It is instructive to know what proportion of each sales dollar is absorbed by various costs and expenses incurred by the enterprise.

Analysts may use common-size statements to compare one company's statements from different years, to detect trends not evident from comparing absolute amounts. Also, common-size statements provide intercompany comparisons regardless of size because they recast financial statements into a comparable common-size format.

*current cash debt coverage, 1438	integral approach, 1419		

LEARNING OBJECTIVES REVIEW

1 Review the full disclosure principle and describe how it is implemented. The full disclosure principle calls for financial reporting of any financial facts significant enough to influence the judgment of an informed reader. Implementing the full disclosure principle is difficult because the cost of disclosure can be substantial and the benefits difficult to assess. Disclosure requirements have increased because of (1) the growing complexity of the business environment, (2) the necessity for timely information, and (3) the use of accounting as a control and monitoring device.

Notes in financial statement preparation. Notes are the accountant's means of amplifying or explaining the items presented in the main body of the statements. Notes can explain in qualitative terms information pertinent to specific financial statement items, and can provide supplementary data of a quantitative nature. Common note disclosures relate to such items as accounting policies; inventories; property, plant, and equipment; creditor claims; contingencies and commitments; and subsequent events.

2 Discuss the disclosure requirements for related-party transactions, post-balance-sheet events, major business segments, and interim reporting. In **related-party transactions**, one party has the ability to significantly influence the policies of the other. As a result, GAAP requires disclosure of the relationship(s) involved, a description and dollar amounts of the transactions, and amounts due from or to related parties. For **post-balance-sheet events**, companies should disclose recognized subsequent events as well as nonrecognized subsequent events. Finally, aggregated figures hide much information about the composition of these consolidated figures. There is no way to tell from the consolidated data the extent to which the differing product lines contribute to the company's profitability, risk, and growth potential. As a result, the profession requires **segment information** in certain situations.

Interim reports cover periods of less than one year. Two viewpoints exist regarding interim reports. The discrete approach holds that each interim period should be treated as a separate accounting period. The integral approach is that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year.

Companies should use the same accounting principles for interim reports that they use for annual reports. A number of unique reporting problems develop related to the following items: (1) advertising and similar costs, (2) expenses subject to year-end adjustment, (3) income taxes, (4) earnings per share, and (5) seasonality.

3 Identify the major disclosures in the auditor's report and understand management's responsibilities for the financial statements. In the **auditor's report**, the auditor expresses an unqualified opinion if satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance with generally accepted accounting principles. A qualified opinion contains an exception to the standard opinion; ordinarily, the exception is not of sufficient magnitude to invalidate the statements as a whole.

An adverse opinion is required when the exceptions to fair presentation are so material that a qualified opinion is not justified. A disclaimer of an opinion is appropriate when the auditor has so little information on the financial statements that no opinion can be expressed.

Management's responsibilities for financials. Management's discussion and analysis (MD&A) section covers three financial aspects of an enterprise's business: liquidity, capital resources, and results of operations. Management's responsibility for the financial statements is often indicated in a letter to stockholders in the annual report.

4 Identify reporting issues related to financial forecasts and fraudulent financial reporting. Financial forecasts.

The SEC has indicated that companies are permitted (not required) to include profit forecasts in their reports. To encourage management to disclose such information, the SEC issued a safe harbor rule. The rule provides protection to a company that presents an erroneous forecast, as long as it prepared the projection on a reasonable basis and disclosed it in good faith. However, the safe harbor rule has not worked well in practice.

The profession's response to fraudulent financial reporting. Fraudulent financial reporting is intentional or reckless conduct, whether through act or omission, that results in materially misleading financial statements. Fraudulent financial reporting usually occurs because of poor internal control, management's poor attitude toward ethics, poor performance, and so on. The Sarbanes-Oxley Act has numerous provisions intended to help prevent fraudulent financial reporting.

***5 Understand the approach to financial statement analysis.** Basic financial statement analysis involves examining relationships between items on the statements (ratio and percentage analysis) and identifying trends in these relationships (comparative analysis). Analysis is used to predict the future, but ratio analysis is limited because the data are from the past. Also, ratio analysis identifies present strengths and weaknesses of a company, but it may not reveal *why* they exist. Although single ratios are helpful, they are not conclusive. For maximum usefulness, analysts must compare them with industry averages, past years, planned amounts, and the like.

***6 Identify major analytic ratios and describe their calculation.** Ratios are classified as liquidity ratios, activity ratios, profitability ratios, and coverage ratios. (1) *Liquidity ratio analysis* measures the short-run ability of a company to pay its currently maturing obligations. (2) *Activity ratio analysis* measures how effectively a company is using its assets. (3) *Profitability ratio analysis* measures the degree of success or failure of a company to generate revenues adequate to cover its costs of operation and provide a return to the owners. (4) *Coverage ratio analysis* measures the degree of protection afforded long-term creditors and investors.

***7 Explain the limitations of ratio analysis.** Ratios are based on historical cost, which can lead to distortions in measuring performance. Also, where estimated items are significant, income ratios lose some of their credibility. In addition, comparability problems exist because companies use different accounting principles and procedures. Finally, analysts must recognize that a substantial amount of important information is not included in a company's financial statements.

***8 Describe techniques of comparative analysis.** Companies present comparative data, which generally includes two years of balance sheet information and three years of income statement information. In addition, many companies include in their annual reports five- to ten-year summaries of pertinent data that permit the reader to analyze trends.

***9 Describe techniques of percentage analysis.** Percentage analysis consists of reducing a series of related amounts to a series of percentages of a given base. Analysts use two approaches. *Horizontal analysis* indicates the proportionate change in financial statement items over a period of time; such analysis is most helpful in evaluating trends. *Vertical analysis* (common-size analysis) is a proportional expression of each item on the financial statements in a given period to a base amount. It analyzes the composition of each of the financial statements from different years (a) to detect trends not evident from the comparison of absolute amounts and (b) to make intercompany comparisons of different-sized enterprises.

PRACTICE PROBLEM

Konetzke Corporation, a publicly traded company, is preparing the interim financial data which it will issue to its stockholders and the Securities and Exchange Commission (SEC) for the fiscal year ending December 31, 2017. Your job as a member of the accounting team is to help determine the appropriate disclosures and any other potential year-end adjustments. You have collected the following information.

- Konetzke is involved in four separate industries. The following information is available for each of the four industries. Konetzke wonders which segments are reportable.

Operating Segment	Total Revenue	Operating Profit (Loss)	Identifiable Assets
Badger	\$ 60,000	\$15,000	\$167,000
Spartan	10,000	1,500	83,000
Cornhusker	23,000	(2,000)	21,000
Hawkeye	9,000	1,000	19,000
	<u>\$102,000</u>	<u>\$15,500</u>	<u>\$290,000</u>

1444 Chapter 24 Full Disclosure in Financial Reporting

2. On February 3, 2018, one of Konetzke's customers declared bankruptcy. At December 31, 2017, this company owed Konetzke \$15,000, of which \$3,000 was paid in January 2018.
3. On January 18, 2018, one of the three major plants of the client burned down.
4. On January 23, 2018, a strike was called at one of Konetzke's largest plants, which halted 30% of its production. As of today (February 13), the strike has not been settled.
5. On February 1, 2016, the board of directors adopted a resolution accepting the offer of an investment banker to guarantee the marketing of \$1,200,000 of preferred stock.

Instructions

- (a) State in each case how the 2017 financial statements would be affected, if at all.
- (b) Moving ahead to the first quarter of 2018, your team has compiled the following summarized revenue and expense data for the first quarter of the year.

Sales revenue	\$30,000
Cost of goods sold	18,000
Variable selling expenses	500
Fixed selling expenses	1,500

Included in the fixed selling expenses was the single lump-sum payment of \$800 for Internet advertisements for the entire year. Address the following with respect to the first quarter report. (1) Explain whether Konetzke should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period. (2) State how the sales revenue, cost of goods sold, and fixed selling expenses would be reflected in Konetzke's quarterly report prepared for the first quarter of 2018.

SOLUTION

- (a) 1. Konetzke first conducts the following three tests:

Revenue test: $10\% \times \$102,000 = \$10,200$. The Badger (\$23,000) and Cornhusker (\$60,000) segments both meet this test.

Operating profit (loss) test: $10\% \times (\$15,000 + \$1,500 + \$1,000) = \$1,750$. The Badger (\$15,000) and Cornhusker (\$2,000 absolute amount) segments both meet this test.

Identifiable assets test: $10\% \times \$290,000 = \$29,000$. The Badger (\$167,000) and Spartan (\$83,000) segments both meet this test.

Thus, Konetzke has three reportable segments for which segment information should be disclosed.

Regarding the post-balance-sheet events:

2. The financial statements should be adjusted for the expected loss pertaining to the remaining receivable of \$12,000. Such adjustment should reduce accounts receivable to their realizable value as of December 31, 2017.
 3. Report the fire loss in a footnote to the balance sheet and refer to it in connection with the income statement, since earnings power is presumably affected.
 4. Strikes are considered general knowledge and therefore disclosure is not required. Many auditors, however, would encourage disclosure in all cases.
 5. Report the action of the new stock issue in a footnote to the balance sheet.
- (b) 1. The company should report its quarterly results as if each interim period is an integral part of the annual period.
 2. The company's revenue and expenses would be reported as follows on its quarterly report prepared for the first quarter of 2018:

Sales revenue	\$30,000
Cost of goods sold	18,000
Variable selling expenses	500
Fixed selling expenses	
Advertising ($\$800 \div 4$)	200
Other ($\$1,500 - \800)	700

Sales revenue and cost of goods sold receive the same treatment as if this were an annual report. Costs and expenses other than product costs should be charged to expense in interim periods as incurred or allocated among interim periods. Consequently, the variable selling expenses and the portion of fixed selling expenses not related to Internet advertising should be reported in full. One-fourth of the Internet advertising is reported as an expense in the first quarter, assuming the advertising is constant throughout the year. These costs can be deferred within the fiscal period if the benefits of the expenditure clearly extend beyond the interim period in which the expenditure is made.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

1. What are the major advantages of notes to the financial statements? What types of items are usually reported in notes?
2. What is the full disclosure principle in accounting? Why has disclosure increased substantially in the last 10 years?
3. The FASB requires a reconciliation between the effective tax rate and the federal government's statutory rate. Of what benefit is such a disclosure requirement?
4. What type of disclosure or accounting do you believe is necessary for the following items?
 - (a) Because of a general increase in the number of labor disputes and strikes, both within and outside the industry, there is an increased likelihood that a company will suffer a costly strike in the near future.
 - (b) A company reports a material unusual and infrequent loss on the income statement. No other mention is made of this item in the annual report.
 - (c) A company expects to recover a substantial amount in connection with a pending refund claim for a prior year's taxes. Although the claim is being contested, counsel for the company has confirmed the client's expectation of recovery.
5. The following information was described in a note of Canon Packing Co.

"During August, Holland Products Corporation purchased 311,003 shares of the Company's common stock which constitutes approximately 35% of the stock outstanding. Holland has since obtained representation on the Board of Directors."

"An affiliate of Holland Products Corporation acts as a food broker for Canon Packing in the greater New York City marketing area. The commissions for such services after August amounted to approximately \$20,000."

Why is this information disclosed?
6. What are the major types of subsequent events? Indicate how each of the following "subsequent events" would be reported.
 - (a) Collection of a note written off in a prior period.
 - (b) Issuance of a large preferred stock offering.
 - (c) Acquisition of a company in a different industry.
 - (d) Destruction of a major plant in a flood.
 - (e) Death of the company's chief executive officer (CEO).
 - (f) Additional wage costs associated with settlement of a four-week strike.
 - (g) Settlement of a federal income tax case at considerably more tax than anticipated at year-end.
 - (h) Change in the product mix from consumer goods to industrial goods.
7. What are diversified companies? What accounting problems are related to diversified companies?
8. What quantitative materiality test is applied to determine whether a segment is significant enough to warrant separate disclosure?
9. Identify the segment information that is required to be disclosed by GAAP.
10. What is an operating segment, and when can information about two operating segments be aggregated?
11. The controller for Lafayette Inc. recently commented, "If I have to disclose our segments individually, the only people who will gain are our competitors and the only people that will lose are our present stockholders." Evaluate this comment.
12. An article in the financial press entitled "Important Information in Annual Reports This Year" noted that annual reports include a management's discussion and analysis section. What would this section contain?
13. "The financial statements of a company are management's, not the accountant's." Discuss the implications of this statement.
14. Olga Conrad, a financial writer, noted recently, "There are substantial arguments for including earnings projections in annual reports and the like. The most compelling is that it would give anyone interested something now available to only a relatively select few—like large stockholders, creditors, and attentive bartenders." Identify some arguments against providing earnings projections.
15. The following comment appeared in the financial press: "Inadequate financial disclosure, particularly with respect to how management views the future and its role in the marketplace, has always been a stone in the shoe. After all, if you don't know how a company views the future, how can you judge the worth of its corporate strategy?" What are some arguments for reporting earnings forecasts?
16. What are interim reports? Why are balance sheets often not provided with interim data?
17. What are the accounting problems related to the presentation of interim data?
18. Dierdorf Inc., a closely held corporation, has decided to go public. The controller, Ed Floyd, is concerned with presenting interim data when a LIFO inventory valuation is used. What problems are encountered with LIFO inventories when quarterly data are presented?
19. What approaches have been suggested to overcome the seasonality problem related to interim reporting?

1446 Chapter 24 Full Disclosure in Financial Reporting

20. What is the difference between a CPA's unqualified opinion or "clean" opinion and a qualified one?
21. Jane Ellerby and Sam Callison are discussing the recent fraud that occurred at LowRental Leasing, Inc. The fraud involved the improper reporting of revenue to ensure that the company would have income in excess of \$1 million. What is fraudulent financial reporting, and how does it differ from an embezzlement of company funds?
- *22. "The significance of financial statement data is not in the amount alone." Discuss the meaning of this statement.
- *23. A close friend of yours, who is a history major and who has not had any college courses or any experience in business, is receiving the financial statements from companies in which he has minor investments (acquired for him by his now-deceased father). He asks you what he needs to know to interpret and to evaluate the financial statement data that he is receiving. What would you tell him?
- *24. Distinguish between ratio analysis and percentage analysis relative to the interpretation of financial statements. What is the value of these two types of analyses?
- *25. In calculating inventory turnover, why is cost of goods sold used as the numerator? As the inventory turnover increases, what increasing risk does the business assume?
- *26. What is the relationship of the asset turnover to the return on assets?
- *27. Explain the meaning of the following terms: (a) common-size analysis, (b) vertical analysis, (c) horizontal analysis, and (d) percentage analysis.
- *28. Presently, the profession requires that earnings per share be disclosed on the face of the income statement. What are some disadvantages of reporting ratios on the financial statements?

BRIEF EXERCISES

BE24-1 (L01) An annual report of Crestwood Industries states, "The company and its subsidiaries have long-term leases expiring on various dates after December 31, 2017. Amounts payable under such commitments, without reduction for related rental income, are expected to average approximately \$5,711,000 annually for the next 3 years. Related rental income from certain subleases to others is estimated to average \$3,094,000 annually for the next 3 years." What information is provided by this note?

BE24-2 (L01) An annual report of **Ford Motor Corporation** states, "Net income a share is computed based upon the average number of shares of capital stock of all classes outstanding. Additional shares of common stock may be issued or delivered in the future on conversion of outstanding convertible debentures, exercise of outstanding employee stock options, and for payment of defined supplemental compensation. Had such additional shares been outstanding, net income a share would have been reduced by 10¢ in the current year and 3¢ in the previous year. . . . As a result of capital stock transactions by the company during the current year (primarily the purchase of Class A Stock from Ford Foundation), net income a share was increased by 6¢." What information is provided by this note?

BE24-3 (L02) Morlan Corporation is preparing its December 31, 2017, financial statements. Two events that occurred between December 31, 2017, and March 10, 2018, when the statements were issued, are described below.

1. A liability, estimated at \$160,000 at December 31, 2017, was settled on February 26, 2018, at \$170,000.
2. A flood loss of \$80,000 occurred on March 1, 2018.

What effect do these subsequent events have on 2017 net income?

BE24-4 (L02) Tina Bailey, a student of intermediate accounting, was heard to remark after a class discussion on segment reporting, "All this is very confusing to me. First we are told that there is merit in presenting the consolidated results, and now we are told that it is better to show segmental results. I wish they would make up their minds." Evaluate this comment.

BE24-5 (L02) Foley Corporation has seven industry segments with total revenues as follows.

Penley	\$600	Cheng	\$225
Konami	650	Takuhi	200
KSC	250	Molina	700
Red Moon	275		

Based only on the revenues test, which industry segments are reportable?

BE24-6 (L02) Operating profits and losses for the seven industry segments of Foley Corporation are:

Penley	\$ 90	Cheng	\$ (20)
Konami	(40)	Takuhi	34
KSC	25	Molina	150
Red Moon	50		

Based only on the operating profit (loss) test, which industry segments are reportable?

BE24-7 (L02) Identifiable assets for the seven industry segments of Foley Corporation are:

Penley	\$500	Cheng	\$200
Konami	550	Takuhi	150
KSC	250	Molina	475
Red Moon	400		

Based only on the identifiable assets test, which industry segments are reportable?

***BE24-8 (LO6)** Answer each of the questions in the following unrelated situations.

- The current ratio of a company is 5:1 and its acid-test ratio is 1:1. If the inventories and prepaid items amount to \$500,000, what is the amount of current liabilities?
- A company had an average inventory last year of \$200,000 and its inventory turnover was 5. If sales volume and unit cost remain the same this year as last and inventory turnover is 8 this year, what will average inventory have to be during the current year?
- A company has current assets of \$90,000 (of which \$40,000 is inventory and prepaid items) and current liabilities of \$40,000. What is the current ratio? What is the acid-test ratio? If the company borrows \$15,000 cash from a bank on a 120-day loan, what will its current ratio be? What will the acid-test ratio be?
- A company has current assets of \$600,000 and current liabilities of \$240,000. The board of directors declares a cash dividend of \$180,000. What is the current ratio after the declaration but before payment? What is the current ratio after the payment of the dividend?

***BE24-9 (LO6)** Heartland Company's budgeted sales and budgeted cost of goods sold for the coming year are \$144,000,000 and \$99,000,000, respectively. Short-term interest rates are expected to average 10%. If Heartland can increase inventory turnover from its present level of 9 times a year to a level of 12 times per year, compute its expected cost savings for the coming year.

EXERCISES

E24-1 (LO2) (Post-Balance-Sheet Events) Madrasah Corporation issued its financial statements for the year ended December 31, 2017, on March 10, 2018. The following events took place early in 2018.

- On January 10, 10,000 shares of \$5 par value common stock were issued at \$66 per share.
- On March 1, Madrasah determined after negotiations with the Internal Revenue Service that income taxes payable for 2017 should be \$1,270,000. At December 31, 2017, income taxes payable were recorded at \$1,100,000.

Instructions

Discuss how the preceding post-balance-sheet events should be reflected in the 2017 financial statements.

E24-2 (LO2) EXCEL (Post-Balance-Sheet Events) For each of the following subsequent (post-balance-sheet) events, indicate whether a company should (a) adjust the financial statements, (b) disclose in notes to the financial statements, or (c) neither adjust nor disclose.

- _____ 1. Settlement of federal tax case at a cost considerably in excess of the amount expected at year-end.
- _____ 2. Introduction of a new product line.
- _____ 3. Loss of assembly plant due to fire.
- _____ 4. Sale of a significant portion of the company's assets.
- _____ 5. Retirement of the company president.
- _____ 6. Prolonged employee strike.
- _____ 7. Loss of a significant customer.
- _____ 8. Issuance of a significant number of shares of common stock.
- _____ 9. Material loss on a year-end receivable because of a customer's bankruptcy.
- _____ 10. Hiring of a new president.
- _____ 11. Settlement of prior year's litigation against the company (no loss was accrued).
- _____ 12. Merger with another company of comparable size.

E24-3 (LO2) EXCEL (Segmented Reporting) Carlton Company is involved in four separate industries. The following information is available for each of the four industries.

<u>Operating Segment</u>	<u>Total Revenue</u>	<u>Operating Profit (Loss)</u>	<u>Identifiable Assets</u>
W	\$ 60,000	\$15,000	\$167,000
X	10,000	3,000	83,000
Y	23,000	(2,000)	21,000
Z	9,000	1,000	19,000
	<u>\$102,000</u>	<u>\$17,000</u>	<u>\$290,000</u>

1448 Chapter 24 Full Disclosure in Financial Reporting

Instructions

Determine which of the operating segments are reportable based on the:

- Revenue test.
- Operating profit (loss) test.
- Identifiable assets test.

***E24-4 (L06) (Ratio Computation and Analysis; Liquidity)** As loan analyst for Utrillo Bank, you have been presented the following information.

	<u>Toulouse Co.</u>	<u>Lautrec Co.</u>
<u>Assets</u>		
Cash	\$ 120,000	\$ 320,000
Receivables	220,000	302,000
Inventories	570,000	518,000
Total current assets	<u>910,000</u>	<u>1,140,000</u>
Other assets	500,000	612,000
Total assets	<u><u>\$1,410,000</u></u>	<u><u>\$1,752,000</u></u>
<u>Liabilities and Stockholders' Equity</u>		
Current liabilities	\$ 305,000	\$ 350,000
Long-term liabilities	400,000	500,000
Capital stock and retained earnings	<u>705,000</u>	<u>902,000</u>
Total liabilities and stockholders' equity	<u><u>\$1,410,000</u></u>	<u><u>\$1,752,000</u></u>
Annual sales	\$ 930,000	\$1,500,000
Rate of gross profit on sales	30%	40%

Each of these companies has requested a loan of \$50,000 for 6 months with no collateral offered. Because your bank has reached its quota for loans of this type, only one of these requests is to be granted.

Instructions

Which of the two companies, as judged by the information given above, would you recommend as the better risk and why? Assume that the ending account balances are representative of the entire year.

***E24-5 (L06) (Analysis of Given Ratios)** Picasso Company is a wholesale distributor of packaging equipment and supplies. The company's sales have averaged about \$900,000 annually for the 3-year period 2015–2017. The firm's total assets at the end of 2017 amounted to \$850,000.

The president of Picasso Company has asked the controller to prepare a report that summarizes the financial aspects of the company's operations for the past 3 years. This report will be presented to the board of directors at their next meeting.

In addition to comparative financial statements, the controller has decided to present a number of relevant financial ratios which can assist in the identification and interpretation of trends. At the request of the controller, the accounting staff has calculated the following ratios for the 3-year period 2015–2017.

	<u>2015</u>	<u>2016</u>	<u>2017</u>
Current ratio	1.80	1.89	1.96
Acid-test (quick) ratio	1.04	0.99	0.87
Accounts receivable turnover	8.75	7.71	6.42
Inventory turnover	4.91	4.32	3.42
Debt to assets ratio	51.0%	46.0%	41.0%
Long-term debt to assets ratio	31.0%	27.0%	24.0%
Sales to fixed assets (fixed asset turnover)	1.58	1.69	1.79
Sales as a percent of 2015 sales	1.00	1.03	1.07
Gross margin percentage	36.0%	35.1%	34.6%
Net income to sales	6.9%	7.0%	7.2%
Return on assets	7.7%	7.7%	7.8%
Return on common stockholders' equity	13.6%	13.1%	12.7%

In preparation of the report, the controller has decided first to examine the financial ratios independent of any other data to determine if the ratios themselves reveal any significant trends over the 3-year period.

Instructions

- The current ratio is increasing while the acid-test (quick) ratio is decreasing. Using the ratios provided, identify and explain the contributing factor(s) for this apparently divergent trend.
- In terms of the ratios provided, what conclusion(s) can be drawn regarding the company's use of financial leverage during the 2015–2017 period?

- (c) Using the ratios provided, what conclusion(s) can be drawn regarding the company's net investment in plant and equipment?

***E24-6 (LO6) (Ratio Analysis)** Edna Millay Inc. is a manufacturer of electronic components and accessories with total assets of \$20,000,000. Selected financial ratios for Millay and the industry averages for firms of similar size are presented below.

	Edna Millay			2017
	2015	2016	2017	Industry Average
Current ratio	2.09	2.27	2.51	2.24
Quick ratio	1.15	1.12	1.19	1.22
Inventory turnover	2.40	2.18	2.02	3.50
Net sales to stockholders' equity	2.71	2.80	2.99	2.85
Return on common stockholders' equity	0.14	0.15	0.17	0.11
Total liabilities to stockholders' equity	1.41	1.37	1.44	0.95

Millay is being reviewed by several entities whose interests vary, and the company's financial ratios are a part of the data being considered. Each of the parties listed below must recommend an action based on its evaluation of Millay's financial position.

Archibald MacLeish Bank. The bank is processing Millay's application for a new 5-year term note. Archibald MacLeish has been Millay's banker for several years but must reevaluate the company's financial position for each major transaction.

Robert Lowell Company. Lowell is a new supplier to Millay and must decide on the appropriate credit terms to extend to the company.

Robert Penn Warren. A brokerage firm specializing in the stock of electronics firms that are sold over-the-counter, Robert Penn Warren must decide if it will include Millay in a new fund being established for sale to Robert Penn Warren's clients.

Working Capital Management Committee. This is a committee of Millay's management personnel chaired by the chief operating officer. The committee is charged with the responsibility of periodically reviewing the company's working capital position, comparing actual data against budgets, and recommending changes in strategy as needed.

Instructions

- Describe the analytical use of each of the six ratios presented above.
- For each of the four entities, identify two financial ratios, from the ratios presented above, that would be most valuable as a basis for its decision regarding Millay.
- Discuss what the financial ratios presented in the question reveal about Millay. Support your answer by citing specific ratio levels and trends as well as the interrelationships between these ratios.

(CMA adapted)

PROBLEMS

P24-1 (LO2) (Subsequent Events) Your firm has been engaged to examine the financial statements of Almaden Corporation for the year 2017. The bookkeeper who maintains the financial records has prepared all the unaudited financial statements for the corporation since its organization on January 2, 2012. The client provides you with the following information.

ALMADEN CORPORATION			
BALANCE SHEET			
DECEMBER 31, 2017			
Assets		Liabilities	
Current assets	\$1,881,100	Current liabilities	\$ 962,400
Other assets	5,171,400	Long-term liabilities	1,439,500
		Capital	4,650,600
	<u>\$7,052,500</u>		<u>\$7,052,500</u>

An analysis of current assets discloses the following.

Cash (restricted in the amount of \$300,000 for plant expansion)	\$ 571,000
Investments in land	185,000
Accounts receivable less allowance of \$30,000	480,000
Inventories (LIFO flow assumption)	645,100
	<u>\$1,881,100</u>

1450 Chapter 24 Full Disclosure in Financial Reporting

Other assets include:

Prepaid expenses	\$ 62,400
Plant and equipment less accumulated depreciation of \$1,430,000	4,130,000
Cash surrender value of life insurance policy	84,000
Unamortized bond discount	34,500
Notes receivable (short-term)	162,300
Goodwill	252,000
Land	446,200
	<u>\$5,171,400</u>

Current liabilities include:

Accounts payable	\$ 510,000
Notes payable (due 2020)	157,400
Estimated income taxes payable	145,000
Premium on common stock	150,000
	<u>\$ 962,400</u>

Long-term liabilities include:

Unearned revenue	\$ 489,500
Dividends payable (cash)	200,000
8% bonds payable (due May 1, 2022)	750,000
	<u>\$1,439,500</u>

Capital includes:

Retained earnings	\$2,810,600
Common stock, par value \$10; authorized 200,000 shares, 184,000 shares issued	1,840,000
	<u>\$4,650,600</u>

The supplementary information below is also provided.

- On May 1, 2017, the corporation issued at 95.4, \$750,000 of bonds to finance plant expansion. The long-term bond agreement provided for the annual payment of interest every May 1. The existing plant was pledged as security for the loan. Use the straight-line method for discount amortization.
- The bookkeeper made the following mistakes.
 - In 2015, the ending inventory was overstated by \$183,000. The ending inventories for 2016 and 2017 were correctly computed.
 - In 2017, accrued wages in the amount of \$225,000 were omitted from the balance sheet, and these expenses were not charged on the income statement.
 - In 2017, a gain of \$175,000 (net of tax) on the sale of certain plant assets was credited directly to retained earnings.
- A major competitor has introduced a line of products that will compete directly with Almaden's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Almaden's line. The competitor announced its new line on January 14, 2018. Almaden indicates that the company will meet the lower prices that are high enough to cover variable manufacturing and selling expenses, but permit recovery of only a portion of fixed costs.
- You learned on January 28, 2018, prior to completion of the audit, of heavy damage because of a recent fire to one of Almaden's two plants; the loss will not be reimbursed by insurance. The newspapers described the event in detail.

Instructions

Analyze the above information to prepare a corrected balance sheet for Almaden in accordance with proper accounting and reporting principles. Prepare a description of any notes that might need to be prepared. The books are closed and adjustments to income are to be made through retained earnings.

P24-2 (LO2) (Segmented Reporting) Cineplex Corporation is a diversified company that operates in five different industries: A, B, C, D, and E. The following information relating to each segment is available for 2018.

	<u>A</u>	<u>B</u>	<u>C</u>	<u>D</u>	<u>E</u>
Sales revenue	\$40,000	\$ 75,000	\$580,000	\$35,000	\$55,000
Cost of goods sold	19,000	50,000	270,000	19,000	30,000
Operating expenses	10,000	40,000	235,000	12,000	18,000
Total expenses	<u>29,000</u>	<u>90,000</u>	<u>505,000</u>	<u>31,000</u>	<u>48,000</u>
Operating profit (loss)	<u>\$11,000</u>	<u>\$(15,000)</u>	<u>\$ 75,000</u>	<u>\$ 4,000</u>	<u>\$ 7,000</u>
Identifiable assets	<u>\$35,000</u>	<u>\$ 80,000</u>	<u>\$500,000</u>	<u>\$65,000</u>	<u>\$50,000</u>

Sales of segments B and C included intersegment sales of \$20,000 and \$100,000, respectively.

Instructions

- (a) Determine which of the segments are reportable based on the:
- (1) Revenue test.
 - (2) Operating profit (loss) test.
 - (3) Identifiable assets test.
- (b) Prepare the necessary disclosures required by GAAP.

***P24-3 (LO6,8) EXCEL GROUPWORK (Ratio Computations and Additional Analysis)** Bradburn Corporation was formed 5 years ago through a public subscription of common stock. Daniel Brown, who owns 15% of the common stock, was one of the organizers of Bradburn and is its current president. The company has been successful, but it currently is experiencing a shortage of funds. On June 10, 2018, Daniel Brown approached the Topeka National Bank, asking for a 24-month extension on two \$35,000 notes, which are due on June 30, 2018, and September 30, 2018. Another note of \$6,000 is due on March 31, 2019, but he expects no difficulty in paying this note on its due date. Brown explained that Bradburn's cash flow problems are due primarily to the company's desire to finance a \$300,000 plant expansion over the next 2 fiscal years through internally generated funds.

The commercial loan officer of Topeka National Bank requested the following financial reports for the last 2 fiscal years.

BRADBURN CORPORATION
BALANCE SHEET
MARCH 31

Assets	2018	2017
Cash	\$ 18,200	\$ 12,500
Notes receivable	148,000	132,000
Accounts receivable (net)	131,800	125,500
Inventories (at cost)	105,000	50,000
Plant & equipment (net of depreciation)	1,449,000	1,420,500
Total assets	<u>\$1,852,000</u>	<u>\$1,740,500</u>
Liabilities and Stockholders' Equity		
Accounts payable	\$ 79,000	\$ 91,000
Notes payable	76,000	61,500
Accrued liabilities	9,000	6,000
Common stock (130,000 shares, \$10 par)	1,300,000	1,300,000
Retained earnings ^a	388,000	282,000
Total liabilities and stockholders' equity	<u>\$1,852,000</u>	<u>\$1,740,500</u>

^aCash dividends were paid at the rate of \$1 per share in fiscal year 2017 and \$2 per share in fiscal year 2018.

BRADBURN CORPORATION
INCOME STATEMENT
FOR THE FISCAL YEARS ENDED MARCH 31

	2018	2017
Sales revenue	\$3,000,000	\$2,700,000
Cost of goods sold ^a	1,530,000	1,425,000
Gross margin	1,470,000	1,275,000
Operating expenses	860,000	780,000
Income before income taxes	610,000	495,000
Income taxes (40%)	244,000	198,000
Net income	<u>\$ 366,000</u>	<u>\$ 297,000</u>

^aDepreciation charges on the plant and equipment of \$100,000 and \$102,500 for fiscal years ended March 31, 2017 and 2018, respectively, are included in cost of goods sold.

Instructions

- (a) Compute the following items for Bradburn Corporation.
- (1) Current ratio for fiscal years 2017 and 2018.
 - (2) Acid-test (quick) ratio for fiscal years 2017 and 2018.
 - (3) Inventory turnover for fiscal year 2018.

1452 Chapter 24 Full Disclosure in Financial Reporting

- (4) Return on assets for fiscal years 2017 and 2018. (Assume total assets were \$1,688,500 at 3/31/16.)
- (5) Percentage change in sales, cost of goods sold, gross margin, and net income after taxes from fiscal year 2017 to 2018.
- (b) Identify and explain what other financial reports and/or financial analyses might be helpful to the commercial loan officer of Topeka National Bank in evaluating Daniel Brown's request for a time extension on Bradburn's notes.
- (c) Assume that the percentage changes experienced in fiscal year 2018 as compared with fiscal year 2017 for sales and cost of goods sold will be repeated in each of the next 2 years. Is Bradburn's desire to finance the plant expansion from internally generated funds realistic? Discuss.
- (d) Should Topeka National Bank grant the extension on Bradburn's notes considering Daniel Brown's statement about financing the plant expansion through internally generated funds? Discuss.

***P24-4 (L09) EXCEL (Horizontal and Vertical Analysis)** Presented below is the comparative balance sheet for Gilmour Company.

GILMOUR COMPANY COMPARATIVE BALANCE SHEET AS OF DECEMBER 31, 2018 AND 2017		
	December 31	
	2018	2017
<u>Assets</u>		
Cash	\$ 180,000	\$ 275,000
Accounts receivable (net)	220,000	155,000
Short-term investments	270,000	150,000
Inventories	1,060,000	980,000
Prepaid expenses	25,000	25,000
Plant & equipment	2,585,000	1,950,000
Accumulated depreciation	(1,000,000)	(750,000)
	<u>\$3,340,000</u>	<u>\$2,785,000</u>
<u>Liabilities and Stockholders' Equity</u>		
Accounts payable	\$ 50,000	\$ 75,000
Accrued expenses	170,000	200,000
Bonds payable	450,000	190,000
Common stock	2,100,000	1,770,000
Retained earnings	570,000	550,000
	<u>\$3,340,000</u>	<u>\$2,785,000</u>

Instructions

(Round to two decimal places.)

- (a) Prepare a comparative balance sheet of Gilmour Company showing the percent each item is of the total assets or total liabilities and stockholders' equity.
- (b) Prepare a comparative balance sheet of Gilmour Company showing the dollar change and the percent change for each item.
- (c) Of what value is the additional information provided in part (a)?
- (d) Of what value is the additional information provided in part (b)?

***P24-5 (L06) WRITING (Dividend Policy Analysis)** Matheny Inc. went public 3 years ago. The board of directors will be meeting shortly after the end of the year to decide on a dividend policy. In the past, growth has been financed primarily through the retention of earnings. A stock or a cash dividend has never been declared. Presented below is a brief financial summary of Matheny Inc. operations.

	(\$000 omitted)				
	2018	2017	2016	2015	2014
Sales revenue	\$20,000	\$16,000	\$14,000	\$6,000	\$4,000
Net income	2,400	1,400	800	700	250
Average total assets	22,000	19,000	11,500	4,200	3,000
Current assets	8,000	6,000	3,000	1,200	1,000
Working capital	3,600	3,200	1,200	500	400
Common shares:					
Number of shares outstanding (000)	2,000	2,000	2,000	20	20
Average market price	\$9	\$6	\$4	—	—

Instructions

- (a) Suggest factors to be considered by the board of directors in establishing a dividend policy.
- (b) Compute the return on assets, profit margin on sales, earnings per share, price-earnings ratio, and current ratio for each of the 5 years for Matheny Inc.
- (c) Comment on the appropriateness of declaring a cash dividend at this time, using the ratios computed in part (b) as a major factor in your analysis.

CONCEPTS FOR ANALYSIS

CA24-1 (General Disclosures; Inventories; Property, Plant, and Equipment) Koch Corporation is in the process of preparing its annual financial statements for the fiscal year ended April 30, 2018. Because all of Koch's shares are traded intrastate, the company does not have to file any reports with the Securities and Exchange Commission. The company manufactures plastic, glass, and paper containers for sale to food and drink manufacturers and distributors.

Koch Corporation maintains separate control accounts for its raw materials, work in process, and finished goods inventories for each of the three types of containers. The inventories are valued at the lower-of-cost-or-market.

The company's property, plant, and equipment are classified in the following major categories: land, office buildings, furniture and fixtures, manufacturing facilities, manufacturing equipment, and leasehold improvements. All fixed assets are carried at cost. The depreciation methods employed depend on the type of asset (its classification) and when it was acquired.

Koch Corporation plans to present the inventory and fixed asset amounts in its April 30, 2018, balance sheet as shown below.

Inventories	\$4,814,200
Property, plant, and equipment (net of depreciation)	6,310,000

Instructions

What information regarding inventories and property, plant, and equipment must be disclosed by Koch Corporation in the audited financial statements issued to stockholders, either in the body or the notes, for the 2017–2018 fiscal year?

(CMA adapted)

CA24-2 (Disclosures Required in Various Situations) Ace Inc. produces electronic components for sale to manufacturers of radios, television sets, and digital sound systems. In connection with her examination of Ace's financial statements for the year ended December 31, 2018, Gloria Rodd, CPA, completed field work 2 weeks ago. Ms. Rodd now is evaluating the significance of the following items prior to preparing her auditor's report. Except as noted, none of these items have been disclosed in the financial statements or notes.

Item 1: A 10-year loan agreement, which the company entered into 3 years ago, provides that dividend payments may not exceed net income earned after taxes subsequent to the date of the agreement. The balance of retained earnings at the date of the loan agreement was \$420,000. From that date through December 31, 2018, net income after taxes has totaled \$570,000 and cash dividends have totaled \$320,000. On the basis of these data, the staff auditor assigned to this review concluded that there was no retained earnings restriction at December 31, 2018.

Item 2: Recently Ace interrupted its policy of paying cash dividends quarterly to its stockholders. Dividends were paid regularly through 2017, discontinued for all of 2018 to finance purchase of equipment for the company's new plant, and resumed in the first quarter of 2019. In the annual report, dividend policy is to be discussed in the president's letter to stockholders.

Item 3: A major electronics firm has introduced a line of products that will compete directly with Ace's primary line, now being produced in the specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Ace's line. The competitor announced its new line during the week following completion of field work. Ms. Rodd read the announcement in the newspaper and discussed the situation by telephone with Ace executives. Ace will meet the lower prices that are high enough to cover variable manufacturing and selling expenses but will permit recovery of only a portion of fixed costs.

Item 4: The company's new manufacturing plant building, which cost \$2,400,000 and has an estimated life of 25 years, is leased from Wichita National Bank at an annual rental of \$600,000. The company is obligated to pay property taxes, insurance, and maintenance. At the conclusion of its 10-year noncancelable lease, the company has the option of purchasing the property for \$1. In Ace's income statement, the rental payment is reported on a separate line.

Instructions

For each of the above items, discuss any additional disclosures in the financial statements and notes that the auditor should recommend to her client. (The cumulative effect of the four items should not be considered.)

1454 Chapter 24 Full Disclosure in Financial Reporting

CA24-3 (Disclosures, Conditional and Contingent Liabilities) Presented below are three independent situations.

Situation 1: A company offers a one-year warranty for the product that it manufactures. A history of warranty claims has been compiled, and the probable amounts of claims related to sales for a given period can be determined.

Situation 2: Subsequent to the date of a set of financial statements but prior to the issuance of the financial statements, a company enters into a contract that will probably result in a significant loss to the company. The amount of the loss can be reasonably estimated.

Situation 3: A company has adopted a policy of recording self-insurance for any possible losses resulting from injury to others by the company's vehicles. The premium for an insurance policy for the same risk from an independent insurance company would have an annual cost of \$4,000. During the period covered by the financial statements, there were no accidents involving the company's vehicles that resulted in injury to others.

Instructions

Discuss the accrual or type of disclosure necessary (if any) and the reason(s) why such disclosure is appropriate for each of the three independent sets of facts above.

(AICPA adapted)

CA24-4 GROUPWORK (Post-Balance-Sheet Events) At December 31, 2017, Coburn Corp. has assets of \$10,000,000, liabilities of \$6,000,000, common stock of \$2,000,000 (representing 2,000,000 shares of \$1 par common stock), and retained earnings of \$2,000,000. Net sales for the year 2017 were \$18,000,000, and net income was \$800,000. As auditors of this company, you are making a review of subsequent events on February 13, 2018, and you find the following.

- On February 3, 2018, one of Coburn's customers declared bankruptcy. At December 31, 2017, this company owed Coburn \$300,000, of which \$60,000 was paid in January 2018.
- On January 18, 2018, one of the three major plants of the client burned.
- On January 23, 2018, a strike was called at one of Coburn's largest plants, which halted 30% of its production. As of today (February 13), the strike has not been settled.
- A major electronics enterprise has introduced a line of products that would compete directly with Coburn's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor has been able to achieve quality similar to that of Coburn's products but at a price 50% lower. Coburn officials say they will meet the lower prices, which are high enough to cover variable manufacturing and selling costs but which permit recovery of only a portion of fixed costs.
- Merchandise traded in the open market is recorded in the company's records at \$1.40 per unit on December 31, 2017. This price had prevailed for 2 weeks, after release of an official market report that predicted vastly enlarged supplies; however, no purchases were made at \$1.40. The price throughout the preceding year had been about \$2, which was the level experienced over several years. On January 18, 2018, the price returned to \$2, after public disclosure of an error in the official calculations of the prior December, correction of which destroyed the expectations of excessive supplies. Inventory at December 31, 2017, was on a lower-of-LIFO-cost-or-market basis.
- On February 1, 2018, the board of directors adopted a resolution accepting the offer of an investment banker to guarantee the marketing of \$1,200,000 of preferred stock.

Instructions

State in each case how the 2017 financial statements would be affected, if at all.

CA24-5 WRITING (Segment Reporting) You are compiling the consolidated financial statements for Winsor Corporation International. The corporation's accountant, Anthony Reese, has provided you with the following segment information.

Note 7: Major Segments of Business

WCI conducts funeral service and cemetery operations in the United States and Canada. Substantially all revenues of WCI's major segments of business are from unaffiliated customers. Segment information for fiscal 2018, 2017, and 2016 follows.

	(thousands)						
	Funeral	Floral	Cemetery	Real Estate	Dried Whey	Limousine	Consolidated
Revenues							
2018	\$302,000	\$10,000	\$ 73,000	\$ 2,000	\$7,000	\$12,000	\$406,000
2017	245,000	6,000	61,000	4,000	4,000	4,000	324,000
2016	208,000	3,000	42,000	3,000	1,000	3,000	260,000
Operating Income							
2018	74,000	1,500	18,000	(36,000)	500	2,000	60,000
2017	64,000	200	12,000	(28,000)	200	400	48,800
2016	54,000	150	6,000	(21,000)	100	350	39,600

Capital Expenditures							
2018	26,000	1,000	9,000	400	300	1,000	37,700
2017	28,000	2,000	60,000	1,500	100	700	92,300
2016	14,000	25	8,000	600	25	50	22,700
Depreciation and Amortization							
2018	13,000	100	2,400	1,400	100	200	17,200
2017	10,000	50	1,400	700	50	100	12,300
2016	8,000	25	1,000	600	25	50	9,700
Identifiable Assets							
2018	334,000	1,500	162,000	114,000	500	8,000	620,000
2017	322,000	1,000	144,000	52,000	1,000	6,000	526,000
2016	223,000	500	78,000	34,000	500	3,500	339,500

Instructions

Determine which of the above segments must be reported separately and which can be combined under the category “Other.” Then, write a one-page memo to the company’s accountant, Anthony Reese, explaining the following.

- What segments must be reported separately and what segments can be combined.
- What criteria you used to determine reportable segments.
- What major items for each must be disclosed.

CA24-6 (Segment Reporting—Theory) Presented below is an excerpt from the financial statements of **H. J. Heinz Company**.

Segment and Geographic Data

The company is engaged principally in one line of business—processed food products—which represents over 90% of consolidated sales. Information about the business of the company by geographic area is presented in the table below.

There were no material amounts of sales or transfers between geographic areas or between affiliates, and no material amounts of United States export sales.

(in thousands of U.S. dollars)	Domestic	Foreign				Total	Worldwide
		United Kingdom	Canada	Western Europe	Other		
Sales	\$2,381,054	\$547,527	\$216,726	\$383,784	\$209,354	\$1,357,391	\$3,738,445
Operating income	246,780	61,282	34,146	29,146	25,111	149,685	396,465
Identifiable assets	1,362,152	265,218	112,620	294,732	143,971	816,541	2,178,693
Capital expenditures	72,712	12,262	13,790	8,253	4,368	38,673	111,385
Depreciation expense	42,279	8,364	3,592	6,355	3,606	21,917	64,196

Instructions

- Why does H. J. Heinz not prepare segment information on its products or services?
- What are export sales, and when should they be disclosed?
- Why are sales by geographical area important to disclose?

CA24-7 WRITING (Segment Reporting—Theory) The following article appeared in the *Wall Street Journal*.

WASHINGTON—The Securities and Exchange Commission staff issued guidelines for companies grappling with the problem of dividing up their business into industry segments for their annual reports.

An industry segment is defined by the Financial Accounting Standards Board as a part of an enterprise engaged in providing a product or service or a group of related products or services primarily to unaffiliated customers for a profit.

Although conceding that the process is a “subjective task” that “to a considerable extent, depends on the judgment of management,” the SEC staff said companies should consider . . . various factors . . . to determine whether products and services should be grouped together or reported as segments.

Instructions

- What does financial reporting for segments of a business enterprise involve?
- Identify the reasons for requiring financial data to be reported by segments.
- Identify the possible disadvantages of requiring financial data to be reported by segments.
- Identify the accounting difficulties inherent in segment reporting.

1456 Chapter 24 Full Disclosure in Financial Reporting

CA24-8 (Interim Reporting) Snider Corporation, a publicly traded company, is preparing the interim financial data which it will issue to its stockholders and the Securities and Exchange Commission (SEC) at the end of the first quarter of the 2017–2018 fiscal year. Snider’s financial accounting department has compiled the following summarized revenue and expense data for the first quarter of the year.

Sales revenue	\$60,000,000
Cost of goods sold	36,000,000
Variable selling expenses	1,000,000
Fixed selling expenses	3,000,000

Included in the fixed selling expenses was the single lump-sum payment of \$2,000,000 for television advertisements for the entire year.

Instructions

- (a) Snider Corporation must issue its quarterly financial statements in accordance with generally accepted accounting principles regarding interim financial reporting.
 - (1) Explain whether Snider should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period.
 - (2) State how the sales revenue, cost of goods sold, and fixed selling expenses would be reflected in Snider Corporation’s quarterly report prepared for the first quarter of the 2017–2018 fiscal year. Briefly justify your presentation.
- (b) What financial information, as a minimum, must Snider Corporation disclose to its stockholders in its quarterly reports?

(CMA adapted)

CA24-9 GROUPWORK (Treatment of Various Interim Reporting Situations) The following statement is an excerpt from the FASB pronouncement related to interim reporting.

Interim financial information is essential to provide investors and others with timely information as to the progress of the enterprise. The usefulness of such information rests on the relationship that it has to the annual results of operations. Accordingly, the Board has concluded that each interim period should be viewed primarily as an integral part of an annual period.

In general, the results for each interim period should be based on the accounting principles and practices used by an enterprise in the preparation of its latest annual financial statements unless a change in an accounting practice or policy has been adopted in the current year. The Board has concluded, however, that certain accounting principles and practices followed for annual reporting purposes may require modification at interim reporting dates so that the reported results for the interim period may better relate to the results of operations for the annual period.

Instructions

The following six independent cases present how accounting facts might be reported on an individual company’s interim financial reports. For each of these cases, state whether the method proposed to be used for interim reporting would be acceptable under generally accepted accounting principles applicable to interim financial data. Support each answer with a brief explanation.

- (a) J. D. Long Company takes a physical inventory at year-end for annual financial statement purposes. Inventory and cost of sales reported in the interim quarterly statements are based on estimated gross profit rates, because a physical inventory would result in a cessation of operations. Long Company does have reliable perpetual inventory records.
- (b) Rockford Company is planning to report one-fourth of its pension expense each quarter.
- (c) Republic Company wrote inventory down to reflect lower-of-cost-or-market in the first quarter. At year-end, the market exceeds the original acquisition cost of this inventory. Consequently, management plans to write the inventory back up to its original cost as a year-end adjustment.
- (d) Gansner Company realized a large gain on the sale of investments at the beginning of the second quarter. The company wants to report one-third of the gain in each of the remaining quarters.
- (e) Fredonia Company has estimated its annual audit fee. It plans to pro rate this expense equally over all four quarters.
- (f) LaBrava Company was reasonably certain it would have an employee strike in the third quarter. As a result, it shipped heavily during the second quarter but plans to defer the recognition of the sales in excess of the normal sales volume. The deferred sales will be recognized as sales in the third quarter when the strike is in progress. LaBrava Company management thinks this is more representative of normal second- and third-quarter operations.

CA24-10 WRITING (Financial Forecasts) An article in *Barron’s* noted the following.

Okay. Last fall, someone with a long memory and an even longer arm reached into that bureau drawer and came out with a moldy cheese sandwich and the equally moldy notion of corporate forecasts. We tried to find out what happened to the cheese sandwich—but, rats!, even recourse to the Freedom of Information Act didn’t help. However, the forecast proposal was dusted off, polished up and found quite serviceable. The SEC, indeed, lost no time in running it up the old flagpole—but no one was very eager to salute. Even after some of the more objectionable features—compulsory corrections and detailed explanations of why the estimates went awry—were peeled off the original proposal.

Seemingly, despite the Commission's smiles and sweet talk, those craven corporations were still afraid that an honest mistake would lead them down the primrose path to consent decrees and class action suits. To lay to rest such qualms, the Commission last week approved a "Safe Harbor" rule that, providing the forecasts were made on a reasonable basis and in good faith, protected corporations from litigation should the projections prove wide of the mark (as only about 99% are apt to do).

Instructions

- (a) What are the arguments for preparing profit forecasts?
- (b) What is the purpose of the "safe harbor" rule?
- (c) Why are corporations concerned about presenting profit forecasts?

CA24-11 ETHICS (Disclosure of Estimates) Nancy Tercek, the financial vice president, and Margaret Lilly, the controller, of Romine Manufacturing Company are reviewing the financial ratios of the company for the years 2017 and 2018. The financial vice president notes that the profit margin on sales ratio has increased from 6% to 12%, a hefty gain for the 2-year period. Tercek is in the process of issuing a media release that emphasizes the efficiency of Romine Manufacturing in controlling cost. Margaret Lilly knows that the difference in ratios is due primarily to an earlier company decision to reduce the estimates of warranty and bad debt expense for 2018. The controller, not sure of her supervisor's motives, hesitates to suggest to Tercek that the company's improvement is unrelated to efficiency in controlling cost. To complicate matters, the media release is scheduled in a few days.

Instructions

- (a) What, if any, is the ethical dilemma in this situation?
- (b) Should Lilly, the controller, remain silent? Give reasons.
- (c) What stakeholders might be affected by Tercek's media release?
- (d) Give your opinion on the following statement and cite reasons: "Because Tercek, the vice president, is most directly responsible for the media release, Lilly has no real responsibility in this matter."

CA24-12 ETHICS (Reporting of Subsequent Events) In June 2017, the board of directors for McElroy Enterprises Inc. authorized the sale of \$10,000,000 of corporate bonds. Jennifer Grayson, treasurer for McElroy Enterprises Inc., is concerned about the date when the bonds are issued. The company really needs the cash, but she is worried that if the bonds are issued before the company's year-end (December 31, 2017) the additional liability will have an adverse effect on a number of important ratios. In July, she explains to company president William McElroy that if they delay issuing the bonds until after December 31 the bonds will not affect the ratios until December 31, 2018. They will have to report the issuance as a subsequent event which requires only footnote disclosure. Grayson expects that with expected improved financial performance in 2018, ratios should be better.

Instructions

- (a) What are the ethical issues involved?
- (b) Should McElroy agree to the delay?

***CA24-13 GROUPWORK (Effect of Transactions on Financial Statements and Ratios)** The transactions listed below relate to Wainwright Inc. You are to assume that on the date on which each of the transactions occurred, the corporation's accounts showed only common stock (\$100 par) outstanding, a current ratio of 2.7:1, and a substantial net income for the year to date (before giving effect to the transaction concerned). On that date, the book value per share of stock was \$151.53.

Each numbered transaction on the next page is to be considered completely independent of the others, and its related answer should be based on the effect(s) of that transaction alone. Assume that all numbered transactions occurred during 2018 and that the amount involved in each case is sufficiently material to distort reported net income if improperly included in the determination of net income. Assume further that each transaction was recorded in accordance with generally accepted accounting principles and, where applicable, in conformity with the all-inclusive concept of the income statement.

For each of the numbered transactions you are to decide whether it:

- (a) Increased the corporation's 2018 net income.
- (b) Decreased the corporation's 2018 net income.
- (c) Increased the corporation's total retained earnings directly (i.e., not via net income).
- (d) Decreased the corporation's total retained earnings directly.
- (e) Increased the corporation's current ratio.
- (f) Decreased the corporation's current ratio.
- (g) Increased each stockholder's proportionate share of total stockholders' equity.
- (h) Decreased each stockholder's proportionate share of total stockholders' equity.
- (i) Increased each stockholder's equity per share of stock (book value).
- (j) Decreased each stockholder's equity per share of stock (book value).
- (k) Had none of the foregoing effects.

1458 Chapter 24 Full Disclosure in Financial Reporting**Instructions**

List the numbers 1 through 9. Select as many letters as you deem appropriate to reflect the effect(s) of each transaction as of the date of the transaction by printing beside the transaction number the letter(s) that identifies that transaction's effect(s).

Transactions

- _____ 1. In January, the board directed the write-off of certain patent rights that had suddenly and unexpectedly become worthless.
- _____ 2. The corporation sold at a profit land and a building that had been idle for some time. Under the terms of the sale, the corporation received a portion of the sales price in cash immediately, the balance maturing at 6-month intervals.
- _____ 3. Treasury stock originally repurchased and carried at \$127 per share was sold for cash at \$153 per share.
- _____ 4. The corporation wrote off all of the unamortized discount and issue expense applicable to bonds that it refinanced in 2018.
- _____ 5. The corporation called in all its outstanding shares of stock and exchanged them for new shares on a 2-for-1 basis, reducing the par value at the same time to \$50 per share.
- _____ 6. The corporation paid a cash dividend that had been recorded in the accounts at time of declaration.
- _____ 7. Litigation involving Wainwright Inc. as defendant was settled in the corporation's favor, with the plaintiff paying all court costs and legal fees. In 2015, the corporation had appropriately established a special contingency for this court action. (Indicate the effect of reversing the contingency only.)
- _____ 8. The corporation received a check for the proceeds of an insurance policy from the company with which it is insured against theft of trucks. No entries concerning the theft had been made previously, and the proceeds reduce but do not cover completely the loss.
- _____ 9. Treasury stock, which had been repurchased at and carried at \$127 per share, was issued as a stock dividend. In connection with this distribution, the board of directors of Wainwright Inc. had authorized a transfer from retained earnings to permanent capital of an amount equal to the aggregate market value (\$153 per share) of the shares issued. No entries relating to this dividend had been made previously.

(AICPA adapted)

USING YOUR JUDGMENT

Financial Reporting Problem**The Procter & Gamble Company (P&G)**

As stated in the chapter, notes to the financial statements are the means of explaining the items presented in the main body of the statements. Common note disclosures relate to such items as accounting policies, segmented information, and interim reporting. The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- (a) What specific items does P&G discuss in its Note 1—Summary of Significant Accounting Policies? (List the headings only.)
- (b) For what segments did P&G report segmented information? Which segment is the largest? Who is P&G's largest customer?
- (c) What interim information was reported by P&G?

Comparative Analysis Case**The Coca-Cola Company and PepsiCo, Inc.**

The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- (a) (1) What specific items does Coca-Cola discuss in its Note 1—Accounting Policies? (Prepare a list of the headings only.)
- (2) What specific items does PepsiCo discuss in its Note 2—Our Summary of Significant Accounting Policies? (Prepare a list of the headings only.)

- (b) For what lines of business or segments do Coca-Cola and PepsiCo present segmented information?
- (c) Note and comment on the similarities and differences between the auditors' reports submitted by the independent auditors of Coca-Cola and PepsiCo for the year 2014.

*Financial Statement Analysis Case

RNA Inc. manufactures a variety of consumer products. The company's founders have run the company for 30 years and are now interested in retiring. Consequently, they are seeking a purchaser who will continue its operations, and a group of investors, Morgan Inc., is looking into the acquisition of RNA. To evaluate its financial stability and operating efficiency, RNA was requested to provide the latest financial statements and selected financial ratios. Summary information provided by RNA is as follows.

RNA INC.
INCOME STATEMENT
FOR THE YEAR ENDED NOVEMBER 30, 2018
(IN THOUSANDS)

Sales (net)	\$30,500
Interest income	500
Total revenue	31,000
Costs and expenses	
Cost of goods sold	17,600
Selling and administrative expenses	3,550
Depreciation and amortization expense	1,890
Interest expense	900
Total costs and expenses	23,940
Income before taxes	7,060
Income taxes	2,800
Net income	\$ 4,260

RNA INC.
BALANCE SHEET
AS OF NOVEMBER 30
(IN THOUSANDS)

	2018	2017
Cash	\$ 400	\$ 500
Short-term investments (at cost)	300	200
Accounts receivable (net)	3,200	2,900
Inventory	6,000	5,400
Total current assets	9,900	9,000
Property, plant, & equipment (net)	7,100	7,000
Total assets	\$17,000	\$16,000
Accounts payable	\$ 3,700	\$ 3,400
Income taxes payable	900	800
Accrued expenses	1,700	1,400
Total current liabilities	6,300	5,600
Long-term debt	2,000	1,800
Total liabilities	8,300	7,400
Common stock (\$1 par value)	2,700	2,700
Paid-in capital in excess of par	1,000	1,000
Retained earnings	5,000	4,900
Total stockholders' equity	8,700	8,600
Total liabilities and stockholders' equity	\$17,000	\$16,000

SELECTED FINANCIAL RATIOS

	RNA INC.		Current Industry
	2017	2016	Average
Current ratio	1.61	1.62	1.63
Acid-test ratio	.64	.63	.68
Times interest earned	8.55	8.50	8.45
Profit margin on sales	13.2%	12.1%	13.0%
Asset turnover	1.84	1.83	1.84
Inventory turnover	3.17	3.21	3.18

Instructions

- Calculate a new set of ratios for the fiscal year 2018 for RNA based on the financial statements presented.
- Explain the analytical use of each of the six ratios presented, describing what the investors can learn about RNA's financial stability and operating efficiency.
- Identify two limitations of ratio analysis.

(CMA adapted)

Accounting, Analysis, and Principles

Savannah, Inc. is a company that manufactures and sells a single product. Unit sales for each of the four quarters of 2017 are projected as follows.

Quarter	Units
First	80,000
Second	150,000
Third	550,000
Fourth	120,000
Annual total	900,000

Savannah incurs variable manufacturing costs of \$0.40 per unit and variable nonmanufacturing costs of \$0.35 per unit. Savannah will incur fixed manufacturing costs of \$720,000 and fixed nonmanufacturing costs of \$1,080,000. Savannah will sell its product for \$4.00 per unit.

Accounting

Determine the amount of net income Savannah will report in each of the four quarters of 2017, assuming actual sales are as projected and employing the integral approach to interim financial reporting. (Ignore income taxes.) Repeat the analysis under the discrete approach.

Analysis

Compute Savannah's profit margin on sales for each of the four quarters of 2017 under both the integral and discrete approaches. Discuss the effects of employing the integral and the discrete approaches on the degree to which Savannah's profit margin on sales varies from quarter to quarter.

Principles

Explain the conceptual rationale behind the integral approach to interim financial reporting.

Codification Exercises

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

CE24-1 Access the glossary (“Master Glossary”) to answer the following.

- What is the definition of “ordinary income” (loss)?
- What is an error in previously issued financial statements?
- What is the definition of “earnings per share”?
- What is a publicly traded company?

CE24-2 What are some examples of related parties?

CE24-3 What are the quantitative thresholds that would require a public company to report separately information about an operating segment?

CE24-4 If an SEC-registered company uses the gross profit method to determine cost of goods sold for interim periods, would it be acceptable for the company to state that it’s not practicable to determine components of inventory at interim periods? Why or why not?

Codification Research Case

As part of the year-end audit, you are discussing the disclosure checklist with your client. The checklist identifies the items that must be disclosed in a set of GAAP financial statements. The client is surprised by the disclosure item related to accounting policies. Specifically, since the audit report will attest to the statements being prepared in accordance with GAAP, the client questions the accounting policy checklist item. The client has asked you to conduct some research to verify the accounting policy disclosures.

Instructions

If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Provide Codification references for your responses.

- In general, what should disclosures of accounting policies encompass?
- List some examples of the most commonly required accounting policy disclosures.

ADDITIONAL PROFESSIONAL RESOURCES

Go to **WileyPLUS** for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

IFRS Insights

IFRS and GAAP disclosure requirements are similar in many regards. The IFRS addressing various disclosure issues are *IAS 24* (“Related Party Disclosures”), disclosure and recognition of post-statement of financial position events in *IAS 10* (“Events after the Balance Sheet Date”), segment reporting IFRS provisions in *IFRS 8* (“Operating Segments”), and interim reporting requirements in *IAS 34* (“Interim Financial Reporting”).

LEARNING OBJECTIVE 10

Compare the disclosure requirements under GAAP and IFRS.

RELEVANT FACTS

Following are the key similarities and differences between GAAP and IFRS related to disclosures.

Similarities

- GAAP and IFRS have similar standards on post-statement of financial position (subsequent) events. That is, under both sets of standards, events that occurred after the statement of financial position date, and which provide additional evidence of conditions that existed at the statement of financial position date, are recognized in the financial statements.
- Like GAAP, IFRS requires that for transactions with related parties, companies disclose the amounts involved in a transaction; the amount, terms, and nature of the outstanding balances; and any doubtful amounts related to those outstanding balances for each major category of related parties.
- Following the recent issuance of *IFRS 8*, “Operating Segments,” the requirements under IFRS and GAAP are very similar. That is, both standards use the management approach to identify reportable segments, and similar segment disclosures are required.
- Neither GAAP nor IFRS require interim reports. Rather, the SEC and securities exchanges outside the United States establish the rules. In the United States, interim reports generally are provided on a quarterly basis; outside the United States, six-month interim reports are common.

Differences

- Due to the broader range of judgments allowed in more principles-based IFRS, note disclosures generally are more expansive under IFRS compared to GAAP.
- Subsequent (or post-statement of financial position) events under IFRS are evaluated through the date that financial instruments are “authorized for issue.” GAAP uses the date when financial statements are “issued.” Also, for share dividends and splits in the subsequent period, IFRS does not adjust but GAAP does.
- Under IFRS, there is no specific requirement to disclose the name of the related party, which is this case under GAAP.
- Under IFRS, interim reports are prepared on a discrete basis; GAAP generally follows the integral approach.

ABOUT THE NUMBERS

Differential Disclosure

A trend toward **differential disclosure** is occurring. The IASB has developed IFRS for small- and medium-sized entities (SMEs). SMEs are entities that publish general-purpose financial statements for external users but do not issue shares or other securities in a public market. Many believe a simplified set of standards makes sense for these companies because they do not have the resources to implement full IFRS. Simplified IFRS for SMEs is a single standard of fewer than 230 pages. It is designed to meet the needs and capabilities of SMEs, which are estimated to account for over 95 percent of all companies around the world. Compared with full IFRS (and many national accounting standards), simplified IFRS for SMEs is less complex in a number of ways:

- Topics not relevant for SMEs are omitted. Examples are earnings per share, interim financial reporting, and segment reporting.
- Simplified IFRS for SMEs allows fewer accounting policy choices. Examples are no option to revalue property, equipment, or intangibles.
- Many principles for recognizing and measuring assets, liabilities, revenue, and expenses are simplified. For example, goodwill is amortized (as a result, there is no annual impairment test), and all borrowing and R&D costs are expensed.
- Significantly fewer disclosures are required (roughly 300 versus 3,000).
- To further reduce standard overload, revisions to the IFRS for SMEs will be limited to once every three years.

Thus, the option of using simplified IFRS helps SMEs meet the needs of their financial statement users while balancing the costs and benefits from a preparer perspective.²⁹

Events after the Reporting Period (Subsequent Events)

Notes to the financial statements should explain any significant financial events that took place after the formal statement of financial position date, but before the statements are authorized for issuance (hereafter referred to as the authorization date). These events are referred to as **events after the reporting date**, or **subsequent events**. Illustration IFRS24-1 shows a time diagram of the subsequent events period.

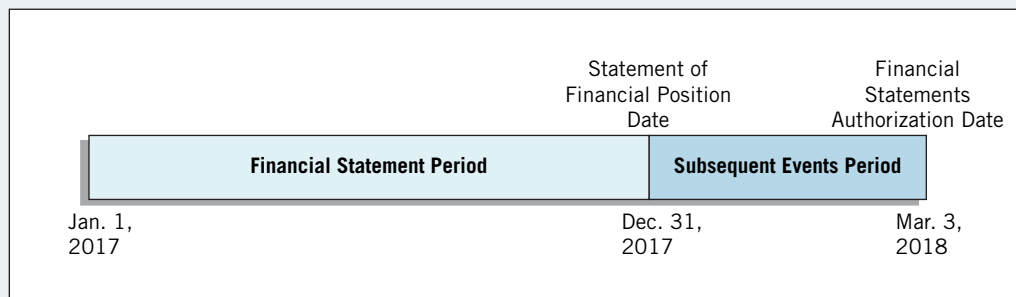

ILLUSTRATION IFRS24-1

Time Periods for
Subsequent Events

A period of several weeks, and sometimes months, may elapse after the end of the fiscal year but before the management or the board of directors authorizes issuance of the financial statements. Various activities involved in closing the books for the period and issuing the statements all take time: taking and pricing the inventory, reconciling subsidiary ledgers with controlling accounts, preparing necessary adjusting entries, ensuring that all transactions for the period have been entered, obtaining an audit of the financial statements by independent certified public accountants, and printing the annual report. During the period between the statement of financial position date and its authorization date, important transactions or other events may occur that materially affect the company's financial position or operating situation.

Many who read a statement of financial position believe the financial condition is constant, and they project it into the future. However, readers must be told if the company has experienced a significant change—e.g., sold one of its plants, acquired a subsidiary, suffered unusual losses, settled significant litigation, or experienced any other important event in the post-statement of financial position period. Without an explanation in a note, the reader might be misled and draw inappropriate conclusions.

Two types of events or transactions occurring after the statement of financial position date may have a material effect on the financial statements or may need disclosure so that readers interpret these statements accurately:

1. Events that provide additional evidence about conditions **that existed** at the statement of financial position date, including the estimates inherent in the process of preparing financial statements. These events are referred to as **adjusted subsequent events** and require adjustments to the financial statements. All information available prior to the authorization date of the financial statements helps investors and creditors evaluate estimates previously made. To ignore these subsequent events is to pass up an opportunity to improve the accuracy of the financial statements. This first type of event encompasses information that an accountant would have recorded in the accounts had the information been known at the statement of financial position date.

For example, if a loss on an account receivable results from a customer's bankruptcy subsequent to the statement of financial position date, the company adjusts the financial statements before their issuance. The bankruptcy stems from the customer's poor financial health existing at the statement of financial position date.

²⁹In the United States, there has been a preference for one set of GAAP except in unusual situations. With the advent of simplified IFRS for SMEs, this position is under review. Both the FASB and the AICPA are studying the big GAAP/little GAAP issue to ensure that any kind of differential reporting is conceptually sound and meets the needs of users. As discussed in the chapter, the FASB has formed a Private Company Council, whose primary objectives are to provide recommendations on FASB standard-setting for privately held enterprises.

The same criterion applies to settlements of litigation. The company must adjust the financial statements if the events that gave rise to the litigation, such as personal injury or patent infringement, took place prior to the statement of financial position date.

- 2.** Events that provide evidence about conditions that **did not exist** at the statement of financial position date but arise subsequent to that date. These events are referred to as **non-adjusted subsequent events** and do not require adjustment of the financial statements. To illustrate, a loss resulting from a customer's fire or flood *after* the statement of financial position date does not reflect conditions existing at that date.

Thus, adjustment of the financial statements is not necessary. A company should not recognize subsequent events that provide evidence about conditions that did not exist at the date of the statement of financial position but that arose after the statement of financial position date.

The following are examples of non-adjusted subsequent events:

- A major business combination after the reporting period or disposing of a major subsidiary.
- Announcing a plan to discontinue an operation or commencing the implementation of a major restructuring.
- Major purchases of assets, other disposals of assets, or expropriation of major assets by government.
- The destruction of a major production plant or inventories by a fire or natural disaster after the reporting period.
- Major ordinary share transactions and potential ordinary share transactions after the reporting period.
- Abnormally large changes after the reporting period in asset prices, foreign exchange rates, or taxes.
- Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees after the statement date.³⁰

Some non-adjusted subsequent events may have to be disclosed to keep the financial statements from being misleading. For such events, a company discloses the nature of the event and an estimate of its financial effect. Illustration IFRS24-2 presents an example of subsequent events disclosure, excerpted from the annual report of **Tieto Corporation**.

ILLUSTRATION IFRS24-2

Disclosure of Subsequent
Events

Tieto Corporation

Note 32. Events After the Balance Sheet Date

In February, Tieto agreed to sell the majority of its operations in Germany and Netherlands to the German Industrial Group Aurelius. Closing is expected to take place during the second quarter of 2013. Net sales of the divested business amounted to over EUR 110 million in 2012. German businesses were loss-making in 2012 and the divestment will improve Tieto's operating margin of underlying business by some 0.5 percentage points based on 2012 performance. Tieto booked about EUR 30 million in impairment in the fourth-quarter 2012. The divested business operations, including around 900 employees in total, will be transferred to the new owner at the time of closing. The divestment excludes Tieto's global businesses and customers, i.e. the forest industry business in Germany, the energy industry business in Netherlands, Product Engineering resources for global customers and selective other global roles.

Between 7 December and 31 December 2012, a total of 111,846 Tieto Corporation new shares have been subscribed for with the company's stock options 2006C, and a total of 3,500 shares with stock options 2009A. As a result of the subscriptions, the number of Tieto shares increased to 72,492,559 and the share capital to EUR 76,064,020.00. The shares subscribed for under the stock options were registered in the Trade Register on 18 January 2013.

Many subsequent events or developments do not require adjustment of or disclosure in the financial statements. Typically, these are non-accounting events or conditions that management

³⁰The effects from natural disasters, like the recent eruption of the Icelandic volcano, which occurred after the year-end for companies with March fiscal years, require disclosure in order to keep the statements from being misleading. Some companies may have to consider whether these disasters affect their ability to continue as going concerns.

normally communicates by other means. These events include legislation, product changes, management changes, strikes, unionization, marketing agreements, and loss of important customers.

Interim Reports

Another source of information for the investor is interim reports. As noted earlier, **interim reports** cover periods of less than one year. The securities exchanges, market regulators, and the accounting profession have an active interest in the presentation of interim information.

Because of the short-term nature of the information in these reports, there is considerable controversy as to the general approach companies should employ. One group, which favors the **discrete approach**, believes that companies should treat each interim period as a separate accounting period. Using that treatment, companies would follow the principles for deferrals and accruals used for annual reports. In this view, companies should report accounting transactions as they occur, and expense recognition should not change with the period of time covered.

Another group, which favors the **integral approach**, believes that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year. In this approach, companies should assign estimated expenses to parts of a year on the basis of sales volume or some other activity base. In general, IFRS requires companies to follow the discrete approach.

Interim Reporting Requirements

Under IFRS, companies should use the same accounting policies for interim reports and for annual reports. They should recognize revenues in interim periods on the same basis as they are for annual periods. For example, if Cedars Corp. uses the percentage-of-completion method as the basis for recognizing revenue on an annual basis, it should use the percentage-of-completion method for interim reports as well. Also, Cedars should treat costs directly associated with revenues (product costs, such as materials, labor and related fringe benefits, and manufacturing overhead) in the same manner for interim reports as for annual reports.

Companies should use the same inventory pricing methods (FIFO, average-cost, etc.) for interim reports and for annual reports. However, companies may use the gross profit method for interim inventory pricing. But, they must disclose the method and adjustments to reconcile with annual inventory.

Discrete Approach. Following the discrete approach, companies record in interim reports revenues and expenses according to the revenue and expense recognition principles. This includes costs and expenses other than product costs (often referred to as period costs). No accruals or deferrals in anticipation of future events during the year should be reported. For example, the cost of a planned major periodic maintenance or overhaul for a company like **Airbus** or other seasonal expenditure that is expected to occur late in the year is not anticipated for interim reporting purposes. The mere intention or necessity to incur expenditure related to the future is not sufficient to give rise to an obligation.

Or, a company like **Carrefour** may budget certain costs expected to be incurred irregularly during the financial year, such as advertising and employee training costs. Those costs generally are discretionary even though they are planned and tend to recur from year to year. However, recognizing an obligation at the end of an interim financial reporting period for such costs that have not yet been incurred generally is not consistent with the definition of a liability.

While year-to-date measurements may involve changes in estimates of amounts reported in prior interim periods of the current financial year, the principles for recognizing assets, liabilities, income, and expenses for interim periods are the same as in annual financial statements. For example, **Wm Morrison Supermarkets plc** records losses from inventory write-downs, restructurings, or impairments in an interim period similar to how it would treat these items in the annual financial statements (when incurred). However, if an estimate from a prior interim period changes in a subsequent interim period of that year, the original estimate is adjusted in the subsequent interim period.

Interim Disclosures. IFRS does not require a complete set of financial statements at the interim reporting date. Rather, companies may comply with the requirements by providing condensed financial statements and selected explanatory notes. Because users of interim financial reports also have access to the most recent annual financial report, companies only need provide explanation of significant events and transactions since the end of the last annual reporting period. Companies should report the following interim data at a minimum.

1. Statement that the same accounting policies and methods of computation are followed in the interim financial statements as compared with the most recent annual financial statements or, if those policies or methods have been changed, a description of the nature and effect of the change.

2. Explanatory comments about the seasonality or cyclicity of interim operations.
3. The nature and amount of items affecting assets, liabilities, equity, net income, or cash flows that are unusual because of their nature, size, or incidence.
4. The nature and amount of changes in accounting policies and estimates of amounts previously reported.
5. Issuances, repurchases, and repayments of debt and equity securities.
6. Dividends paid (aggregate or per share) separately for ordinary shares and other shares.
7. Segment information, as required by *IFRS 8*, "Operating Segments."
8. Changes in contingent liabilities or contingent assets since the end of the last annual reporting period.
9. Effect of changes in the composition of the company during the interim period, such as business combinations, obtaining or losing control of subsidiaries and long-term investments, restructurings, and discontinued operations.
10. Other material events subsequent to the end of the interim period that have not been reflected in the financial statements for the interim period.

If a complete set of financial statements is provided in the interim report, companies comply with the provisions of *IAS 1*, "Presentation of Financial Statements."

ON THE HORIZON

Hans Hoogervorst, chairperson of the IASB, recently noted: "High quality financial information is the lifeblood of market-based economies. If the blood is of poor quality, then the body shuts down and the patient dies. It is the same with financial reporting. If investors cannot trust the numbers, then financial markets stop working. For market-based economies, that is really bad news. It is an essential public good for market-based economies. . . . And in the past 10 years, most of the world's economies—developed and emerging—have embraced IFRSs." While the United States has yet to adopt IFRS, there is no question that IFRS and GAAP are converging quickly. We have provided expanded discussion in the *International Perspectives* and *IFRS Insights* to help you understand the issues surrounding convergence as they relate to intermediate accounting. After reading these discussions, you should realize that IFRS and GAAP are very similar in many areas, with differences in those areas revolving around some minor technical points. In other situations, the differences are major; for example, IFRS does not permit LIFO inventory accounting. Our hope is that the FASB and IASB can continue convergence efforts, to narrow differences in accounting standards for use by companies around the world.

IFRS SELF-TEST QUESTIONS

1. Which of the following is **false**?
 - (a) In general, IFRS note disclosures are more expansive compared to GAAP.
 - (b) GAAP and IFRS have similar standards on subsequent events.
 - (c) Both IFRS and GAAP require interim reports although the reporting frequency varies.
 - (d) Segment reporting requirements are very similar under IFRS and GAAP.
2. Differential reporting for small- and medium-sized entities:
 - (a) is required for all companies less than a certain size.
 - (b) omits accounting topics not relevant for SMEs, such as earnings per share, and interim and segment reporting.
 - (c) has different rules for topics such as earnings per share, and interim and segment reporting.
 - (d) requires significantly more disclosures, since more items are not recognized in the financial statements.
3. Subsequent events are reviewed through which date under IFRS?
 - (a) Statement of financial position date.
 - (b) Sixty days after the year-end date.
 - (c) Date of independent auditor's opinion.
 - (d) Authorization date of the financial statements.
4. Under IFRS, share dividends declared after the statement of financial position date but before the end of the subsequent events period are:
 - (a) accounted for similar to errors as a prior period adjustment.
 - (b) adjusted subsequent events, because they are paid from prior year earnings.
 - (c) not adjusted in the current year's financial statements.
 - (d) recognized on a prospective basis from the date of declaration.
5. Interim reporting under IFRS:
 - (a) is prepared using the discrete approach.
 - (b) is prepared using a combination of the discrete and integral approach.
 - (c) requires a complete set of financial statements for each interim period.
 - (d) permits companies to omit disclosure of material events subsequent to the interim reporting date.

IFRS CONCEPTS AND APPLICATION

IFRS24-1 Where can authoritative IFRS be found related to the various disclosure issues discussed in the chapter?

IFRS24-2 What are the major types of subsequent events? Indicate how each of the following “subsequent events” would be reported.

- (a) Collection of a note written off in a prior period.
- (b) Issuance of a large preference share offering.
- (c) Acquisition of a company in a different industry.
- (d) Destruction of a major plant in a flood.
- (e) Death of the company’s chief executive officer (CEO).
- (f) Additional wage costs associated with settlement of a four-week strike.
- (g) Settlement of an income tax case at considerably more tax than anticipated at year-end.
- (h) Change in the product mix from consumer goods to industrial goods.

IFRS24-3 Morlan Corporation is preparing its December 31, 2017, financial statements. Two events that occurred between December 31, 2017, and March 10, 2018, when the statements were authorized for issue, are described below.

1. A liability, estimated at \$160,000 at December 31, 2017, was settled on February 26, 2018, at \$170,000.
2. A flood loss of \$80,000 occurred on March 1, 2018.

Instructions

What effect do these subsequent events have on 2017 net income?

IFRS24-4 Keystone Corporation’s financial statements for the year ended December 31, 2017, were authorized for issue on March 10, 2018. The following events took place early in 2018.

- (a) On January 10, 10,000 ordinary shares of \$5 par value were issued at \$66 per share.
- (b) On March 1, Keystone determined after negotiations with the taxing authorities that income taxes payable for 2017 should be \$1,320,000. At December 31, 2017, income taxes payable were recorded at \$1,100,000.

Instructions

Discuss how the preceding subsequent events should be reflected in the 2017 financial statements.

IFRS24-5 For each of the following subsequent events, indicate whether a company should (a) adjust the financial statements, (b) disclose in notes to the financial statements, or (c) neither adjust nor disclose.

- _____ 1. Settlement of a tax case at a cost considerably in excess of the amount expected at year-end.
- _____ 2. Introduction of a new product line.
- _____ 3. Loss of assembly plant due to fire.
- _____ 4. Sale of a significant portion of the company’s assets.
- _____ 5. Retirement of the company president.
- _____ 6. Issuance of a significant number of ordinary shares.
- _____ 7. Loss of a significant customer.
- _____ 8. Prolonged employee strike.
- _____ 9. Material loss on a year-end receivable because of a customer’s bankruptcy.
- _____ 10. Hiring of a new president.
- _____ 11. Settlement of prior year’s litigation against the company (no loss was accrued).
- _____ 12. Merger with another company of comparable size.

IFRS24-6 What are interim reports? Why is a complete set of financial statements often not provided with interim data? What are the accounting problems related to the presentation of interim data?

IFRS24-7 Dierdorf Inc., a closely held corporation, has decided to go public. The controller, Ed Floyd, is concerned with presenting interim data when an inventory write-down is recorded. What problems are encountered with inventories when quarterly data are presented?

IFRS24-8 Bill Novak is working on an audit of an IFRS client. In his review of the client’s interim reports, he notes that the reports are prepared on a discrete basis. That is, each interim report is viewed as a distinct period. Is this acceptable under IFRS? If so, explain how that treatment could affect comparisons to a GAAP company.

1468 Chapter 24 Full Disclosure in Financial Reporting

IFRS24-9 Snider Corporation, a publicly traded company, is preparing the interim financial data which it will issue to its shareholders at the end of the first quarter of the 2017–2018 fiscal year. Snider’s financial accounting department has compiled the following summarized revenue and expense data for the first quarter of the year.

Sales revenue	\$60,000,000
Cost of goods sold	36,000,000
Variable selling expenses	1,000,000
Fixed selling expenses	3,000,000

Included in the fixed selling expenses was the single lump-sum payment of \$2,000,000 for television advertisements for the entire year.

Instructions

- (a) Snider Corporation must issue its quarterly financial statements in accordance with IFRS regarding interim financial reporting.
 - (1) Explain whether Snider should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period.
 - (2) State how the sales revenue, cost of goods sold, and fixed selling expenses would be reflected in Snider Corporation’s quarterly report prepared for the first quarter of the 2017–2018 fiscal year. Briefly justify your presentation.
- (b) What financial information, as a minimum, must Snider Corporation disclose to its shareholders in its quarterly reports?

Professional Research

IFRS24-10 As part of the year-end audit, you are discussing the disclosure checklist with your client. The checklist identifies the items that must be disclosed in a set of IFRS financial statements. The client is surprised by the disclosure item related to accounting policies. Specifically, since the audit report will attest to the statements being prepared in accordance with IFRS, the client questions the accounting policy checklist item. The client has asked you to conduct some research to verify the accounting policy disclosures.

Instructions

Access the IFRS authoritative literature at the IASB website (<http://eifrs.iasb.org/>). (Click on the IFRS tab and then register for free eIFRS access if necessary.) When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- (a) In general, what should disclosures of accounting policies encompass?
- (b) List some examples of the most commonly required disclosures.

International Financial Reporting Problem**Marks and Spencer plc (M&S)**

IFRS24-11 The financial statements of **M&S** are presented in Appendix E. The company’s complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S’s financial statements and the accompanying notes to answer the following questions.

- (a) What specific items does M&S discuss in its Note 1—Summary of Significant Accounting Policies? (List the headings only.)
- (b) For what segments did M&S report segmented information? Which segment is the largest? Who is M&S’s largest customer?
- (c) What interim information was reported by M&S?

1. c 2. b 3. d 4. c 5. a

A

Private Company Accounting

The FASB has traditionally taken the position that there should be one set of GAAP. However, due to growing concern about differential costs and benefits of a “one size fits all” reporting package, the FASB has considered providing alternative accounting treatments for private companies in areas that include (1) recognition and measurement, (2) presentation and disclosure, and (3) transition methods for financial accounting standards and effective dates. Since 2012, the FASB has worked with the Private Company Council (PCC) to improve the process of setting accounting standards for private companies.

THE PRIVATE COMPANY COUNCIL (PCC)

Background on the PCC

The PCC is comprised of 9-12 members with balanced representation from private company auditing, preparer, and user communities. The PCC has two principal responsibilities:

1. The PCC determines, using the Private Company Decision-Making Framework (PCC Framework), whether alternatives to existing GAAP are necessary to address the needs of users of private company financial statements.
2. The PCC serves as the primary advisory body to the FASB on the appropriate treatment for private companies for items under active consideration on the FASB’s technical agenda.¹

Following a FASB endorsement process, alternatives for private companies developed by the PCC are incorporated into GAAP.

Private Company Decision-Making Framework

One of the PCC’s first responsibilities was to work with the FASB to develop mutually agreed-on criteria for private company alternatives. The result of that joint effort was the *Private Company Decision-Making Framework: A Guide for Evaluating Financial Accounting and Reporting for Private Companies* (the PCC Framework), issued in December 2013. This guide assists the Board and the PCC in determining whether and in what circumstances to provide alternative recognition, measurement, disclosure, display, effective date, and transition guidance for private companies reporting under GAAP.

In making these assessments, the Board and the PCC first should determine whether the alternative recognition or measurement guidance being evaluated provides **relevant**

¹The Financial Accounting Foundation (FAF) recently completed a three-year review of the PCC. In response to stakeholder input, the FAF trustees made targeted improvements to increase the PCC’s effectiveness without significantly changing the PCC’s roles and responsibilities. The changes to the PCC operating procedures will increase the PCC’s focus on providing the FASB with private company perspectives on the FASB’s active agenda projects. As a result, the PCC will operate in a fashion similar to FASB’s other advisory groups [Investors Technical Advisory Committee (ITAC), the Not-for-Profit Advisor Committee (NAC), and the Valuation Resource Group (VRG)], which share their views and expertise with the Board on matters related to projects on the Board’s agenda, from the perspectives of various constituencies.

information to users of private company financial statements at a **reasonable cost**. That analysis should focus on (a) the relevance of the information in meeting the objective of financial reporting for typical users of private company financial statements, (b) the characteristics that differentiate users of private company financial statements from users of public company financial statements, and (c) the cost and complexity of applying the guidance.

The guide helps the Board and the PCC identify differential information needs of users of public company financial statements and users of private company financial statements, and to identify opportunities to reduce the complexity and costs of preparing financial statements in accordance with GAAP.

PCC Accomplishments

Since its first meeting in December 2012, the PCC has addressed a number of financial accounting and reporting issues that are important to private company stakeholders as well as the wider financial reporting community. In addition to developing the PCC Framework, the FASB also issued an Accounting Standards Update on the definition of a public business entity. The FASB and the PCC use that definition to identify the types of companies that are excluded from the scope of the PCC Framework. In general, a company is considered a public business entity if it is required to file or furnish financial statements to the SEC or to file or furnish financial statements with a regulatory agency (domestic or foreign) other than the SEC in preparation for the sale of or for purposes of issuing securities.

The PCC also has become a springboard for efforts to reduce complexity in GAAP for all types of organizations, not just private companies. The FASB has adopted a practice of considering whether any GAAP alternative proposed by the PCC may make sense for public as well as private companies—along with not-for-profit organizations. For example, the FASB issued an Accounting Standards Update to address financial reporting complexity for both public and private development-stage companies.

Two issues addressed by the PCC relate to the accounting for intangible assets and the amortization of goodwill.

PRIVATE COMPANY ALTERNATIVES FOR INTANGIBLE ASSETS AND GOODWILL

Accounting for Identifiable Intangible Assets

In December 2014, the FASB issued an Accounting Standards Update, developed with the PCC, that provides an alternative to exempt private companies from separately recognizing and measuring non-competition agreements and customer-related intangible assets (such as customer relationships) that are not capable of being sold or licensed independently in a business combination.²

Additional Background

As discussed in Chapter 12, in a business combination the acquirer separately recognizes all intangible assets that are **identifiable**, at their acquisition-date fair values. An intangible asset is identifiable if it meets either of the following criteria:

1. It arises from contractual or other legal rights, regardless of whether those rights are transferable or separable from the entity or from other rights and obligations.

²Accounting Standards Update No. 2014-18, *Business Combinations (Topic 805): Accounting for Identifiable Intangible Assets in a Business Combination* (a consensus of the Private Company Council).

2. It is separable, that is, capable of being separated from the company and sold, transferred, licensed, rented, or exchanged, either individually or together with a related contract, identifiable asset, or liability, regardless of whether the company intends to do so.

For example, in the Tractorling example in the textbook (see pages 620–621), Multi-Diversified included patents (which meet the identifiable definition) in its calculation of the net identifiable assets.

In its reexamination of this accounting for private companies, the PCC found that separate information on certain customer-related intangible assets is not decision-useful because the assets may not be transferable and estimates of their fair values are highly subjective. As a result, the PCC recommended, and the FASB endorsed, an alternative that, if elected, indicates that private company acquirers shall not recognize separately from goodwill the following intangible assets:

- Customer-related intangible assets *unless* they are capable of being sold or licensed independently from other assets of a business.
- Non-competition agreements.

Examples of customer-related intangible assets include (1) mortgage servicing rights, (2) commodity supply contracts, (3) core deposits, and (4) customer information (for example, names and contact information).

Alternative Accounting Example

To illustrate in the context of the Tractorling example in Chapter 12 (pages 620–621), recall that goodwill is recorded only when an entire business is purchased. To record goodwill, a company compares the fair value of the net tangible and **identifiable intangible assets** with the purchase price of the acquired business. The difference is considered goodwill. Goodwill is the residual—the excess of cost over fair value of the identifiable net assets acquired.

In its acquisition of Tractorling, Multi-Diversified determined the fair value of net assets to be \$350,000, but it was willing to pay \$400,000 due to Tractorling’s established reputation, good credit rating, top management team, well-trained employees, and so on. These factors make the value of the business greater than \$350,000. Multi-Diversified places a premium on the future earning power of these attributes as well as on the basic asset structure of the company today.

Multi-Diversified labels the difference between the purchase price of \$400,000 and the fair value of net assets of \$350,000 as goodwill. Goodwill is viewed as one or a group of unidentifiable values (intangible assets), the cost of which “is measured by the difference between the cost of the group of assets or enterprise acquired and the sum of the assigned costs of individual tangible and identifiable intangible assets acquired less liabilities assumed.” This procedure assumes goodwill covers all the values that cannot be specifically identified with any identifiable tangible or intangible asset. Illustration A-1 shows this approach.

Assigned to purchase price of \$400,000	→ Cash	\$ 25,000
	→ Accounts receivable	35,000
	→ Inventory	122,000
	→ Property, plant, and equipment, net	205,000
	→ Patents	18,000
	→ Liabilities	<u>(55,000)</u>
	Fair value of net identifiable assets	350,000
	Purchase price	<u>400,000</u>
	Value assigned to goodwill	<u>\$ 50,000</u>

ILLUSTRATION A-1

Determination of
Goodwill—Master Valuation
Approach

A-4 Appendix A Private Company Accounting

Multi-Diversified records this transaction as follows.

Cash	25,000	
Accounts Receivable	35,000	
Inventory	122,000	
Property, Plant, and Equipment	205,000	
Patents	18,000	
Goodwill	50,000	
Liabilities		55,000
Cash		400,000

To illustrate the private company alternative, assume that **instead of patents**, Tractorling employees had a non-compete agreement with Tractorling management that would preclude them from working for any competing companies for one year following the acquisition (with an estimated fair value of \$18,000) should they leave the company. Such agreements are common in business combinations to ensure a smooth transition period.

If Multi-Diversified was a public company, as with the patents, it would recognize this non-compete agreement separately from goodwill on the post-acquisition balance sheet. However, a private company that chooses the alternative accounting would not recognize a separate intangible asset for the non-compete agreement but instead include the \$18,000 in the Goodwill balance. That is, rather than the entry recorded above, a private company would make the following entry.

Cash	25,000	
Accounts Receivable	35,000	
Inventory	122,000	
Property, Plant, and Equipment	205,000	
Goodwill	68,000	
Liabilities		55,000
Cash		400,000

Note that the Goodwill balance (\$50,000 + \$18,000) includes the amount attributed to the non-compete agreement. **Private companies that elect this accounting alternative must also elect the private company alternative to amortize goodwill (discussed in the next section).**

Accounting for Goodwill

The FASB also issued guidance developed with the PCC that provides an alternative for private companies in the accounting for goodwill.³ Under the alternative, rather than considering goodwill to have an indefinite life, private companies can elect to amortize goodwill on a straight-line basis over a period not to exceed 10 years. In addition, goodwill under this alternative will be tested for impairment when a triggering event occurs and based on a comparison of the carrying value of the goodwill to the fair value of the company or reporting unit.

Additional Background

As discussed in Chapter 12, companies consider goodwill to have an indefinite life and therefore should not amortize it. Although goodwill may decrease in value over time, predicting the actual life of goodwill and an appropriate pattern of amortization is extremely difficult. In addition, investors find the amortization charge of little use in evaluating financial performance. Furthermore, the investment community wants to

³Accounting Standards Update No. 2014-02, *Intangibles—Goodwill and Other (Topic 350): Accounting for Goodwill* (a consensus of the Private Company Council).

know the amount invested in goodwill, which often is the largest intangible asset on a company's balance sheet. Therefore, companies adjust its carrying value only when goodwill is impaired.

As part of its research and outreach efforts on intangible assets and goodwill, the PCC obtained feedback from private company stakeholders that the benefits of the current accounting for goodwill after initial recognition do not justify the related costs. Feedback from users of private company financial statements indicated that the current goodwill impairment test provides limited decision-useful information because most users of private company financial statements generally disregard goodwill and goodwill impairment losses in their analysis of a private company's financial condition and operating performance. The PCC also received input from preparers and auditors of private company financial statements indicating concerns about the cost and complexity involved in performing the current goodwill impairment test. Even though the recent introduction of the optional qualitative assessment has provided some cost reduction in testing goodwill for impairment, many of those stakeholders stated that the level of cost reduction has not been significant.

Private Company Alternative

In response to this input, the PCC proposed (and the FASB endorsed) an alternative accounting for private companies. Under the alternative, private companies that elect the accounting alternative will:

1. Amortize goodwill on a straight-line basis over 10 years, or less than 10 years if a shorter useful life is more appropriate.
2. Test goodwill for impairment when a triggering event occurs that indicates that the fair value of a company (or a reporting unit) may be below its carrying amount.

When a triggering event occurs, a company has the option to first assess qualitative factors to determine whether the quantitative impairment test is necessary. If that qualitative assessment indicates that it is more likely than not that goodwill is impaired, the company must perform the quantitative test to compare the company's fair value with its carrying amount, including goodwill (or the fair value of the reporting unit with the carrying amount, including goodwill, of the reporting unit). If the qualitative assessment indicates that it is not more likely than not that goodwill is impaired, further testing is unnecessary. The goodwill impairment loss cannot exceed the company's (or the reporting unit's) carrying amount of goodwill.

Alternative Accounting Example

To illustrate the accounting under the private company alternative, refer to our Tractorling example in the prior section, in which Multi-Diversified recorded goodwill of \$68,000 (including the value of the non-compete agreement for Tractorling management). Under the private company alternative, using the maximum life of 10 years, Multi-Diversified will amortize goodwill through the following entry each year following the acquisition.

Amortization Expense (\$68,000 ÷ 10)	6,800	
Goodwill		6,800

Going forward, the recorded goodwill is evaluated for impairment only if there is a triggering event that indicates that the goodwill's fair value may be less than the carrying value. Thus, the alternative accounting is similar to the accounting for limited-life intangible assets.⁴

⁴As noted, if a private company makes the election to apply the identifiable intangible asset alternative discussed in the prior section, it must also elect the alternative for goodwill amortization and impairment.

SUMMARY

As reflected in the feedback received in the three-year review, the PCC has generally been graded as a success in helping the FASB respond to private company concerns related to unique user needs and the cost and complexity of applying accounting guidance. In developing the private company alternatives for intangible assets and goodwill, the FASB and PCC was guided by the PCC Framework to assess whether the recognition or measurement guidance being evaluated provides relevant information to users of private company financial statements at a reasonable cost. While some users may not find the information resulting from applying these alternatives as relevant, the alternatives provide private companies relief from costs associated with estimating the fair value of some identifiable intangibles and annual goodwill impairment tests. That is, amortization will reduce the likelihood of impairments because private companies generally will test goodwill for impairment less frequently.⁵

While the work of the PCC is at an early stage, a recent survey indicates that 16 percent of approximately 2,900 surveyed private companies have adopted or intend to adopt the goodwill amortization alternatives. The jury is still out on other private company alternatives.⁶ Although the PCC has not addressed all of the topics it originally identified as priorities, the topics that remain are generally encompassed by the FASB's simplification initiatives, which are aimed at reducing complexity for both public *and* private companies, or as part of its Disclosure Framework project.

⁵Based in part on its deliberation of this private company issue, the FASB recently added a project to its agenda on the subsequent accounting for goodwill for public business entities and not-for-profit entities. That is, some of the same benefits and reduction in cost and complexity associated with goodwill alternatives for private companies may also be relevant to public companies.

⁶PricewaterhouseCoopers, "Representing Private Companies at the FASB: The Next Phase for the PCC," *Point of View* (June 2015).

B

Specimen Financial Statements: The Procter & Gamble Company

Once each year, a corporation communicates to its stockholders and other interested parties by issuing a complete set of audited financial statements. The **annual report**, as this communication is called, summarizes the financial results of the company's operations for the year and its plans for the future. Many annual reports are attractive, multi-colored, glossy public relations pieces, containing pictures of corporate officers and directors as well as photos and descriptions of new products and new buildings. Yet the basic function of every annual report is to report financial information, almost all of which is a product of the corporation's accounting system.

The content and organization of corporate annual reports have become fairly standardized. Excluding the public relations part of the report (pictures, products, etc.), the following are the traditional financial portions of the annual report:

- Financial Highlights
- Letter to the Stockholders
- Management's Discussion and Analysis
- Financial Statements
- Notes to the Financial Statements
- Management's Responsibility for Financial Reporting
- Management's Report on Internal Control over Financial Reporting
- Report of Independent Registered Public Accounting Firm
- Selected Financial Data

The official SEC filing of the annual report is called a **Form 10-K**, which often omits the public relations pieces found in most standard annual reports. On the following pages, we present **The Procter & Gamble Company (P&G)**'s financial statements taken from the company's 2014 Form 10-K. To access P&G's Form 10-K, including notes to the financial statements, follow these steps:

- 1.** Go to <http://www.pginvestor.com/>.
- 2.** Select the Financial Reporting link.
- 3.** Select the 10-K annual report dated June 30, 2014.
- 4.** The Notes to Consolidated Financial Statements begin on page 52.

C

Specimen Financial Statements: The Coca-Cola Company

The Coca-Cola Company is the world's largest beverage company. It owns or licenses and markets more than 500 nonalcoholic beverage brands, primarily sparkling beverages, but also a variety of still beverages such as waters, enhanced waters, juices and juice drinks, ready-to-drink teas and coffees, and energy and sports drinks. Finished beverage products bearing Coca-Cola trademarks, sold in the United States since 1886, are now available in more than 200 countries. To access Coca-Cola's complete annual report, including notes to the financial statements, follow these steps:

1. Go to <http://www.coca-colacompany.com/investors/>.
2. Select Financial Reports and Information and then click on 2014 Annual Report on Form 10-K.
3. The Notes to Consolidated Financial Statements begin on page 78.

1. The 'Other reserve' was originally created as part of the capital restructuring that took place in 2002. It represents the difference between the nominal value of the shares issued prior to the capital reduction by the Company (being the carrying value of the investment in Marks and Spencer plc) and the share capital, share premium and capital redemption reserve of Marks and Spencer plc at the date of the transaction.

2. The 'Retained earnings reserve' includes a cumulative £12.6m loss (last year £7.1m loss) in the currency reserve.

3. Amounts reclassified and reported in profit have been recorded in cost of sales (£4.4m, last year £10.0m) and finance costs (£55.6m, last year (£46.4m)).

CONSOLIDATED STATEMENT OF CASH FLOWS

	Notes	52 weeks ended 28 March 2015 £m	52 weeks ended 29 March 2014 £m
Cash flows from operating activities			
Cash generated from operations	26	1,349.1	1,175.5
Income tax paid		(71.1)	(45.9)
Net cash inflow from operating activities		1,278.0	1,129.6
Cash flows from investing activities			
Proceeds on property disposals		35.4	25.0
Purchase of property, plant and equipment		(521.8)	(440.1)
Purchase of intangible assets		(178.0)	(201.5)
Reduction/(purchase) of current financial assets		6.0	(1.7)
Interest received		9.3	3.4
Net cash used in investing activities		(649.1)	(614.9)
Cash flows from financing activities			
Interest paid ¹		(115.3)	(132.7)
Cash (outflow)/inflow from borrowings		(165.7)	167.5
(Repayment)/drawdown of syndicated loan notes		(10.2)	154.1
Redemption of medium-term notes		-	(400.0)
Decrease in obligations under finance leases		(4.8)	(7.3)
Payment of liability to the Marks & Spencer UK Pension Scheme		(54.4)	(50.3)
Equity dividends paid		(280.7)	(273.6)
Shares issued on exercise of employee share options		40.8	44.2
Purchase of own shares by employee trust		(24.2)	-
Net cash used in financing activities		(614.5)	(498.1)
Net cash inflow from activities		14.4	16.6
Effects of exchange rate changes		(2.3)	(1.6)
Opening net cash		175.7	160.7
Closing net cash	27	187.8	175.7

1. Includes interest on the partnership liability to the Marks & Spencer UK Pension Scheme.

	Notes	52 weeks ended 28 March 2015 £m	52 weeks ended 29 March 2014 £m
Reconciliation of net cash flow to movement in net debt			
Opening net debt		(2,463.6)	(2,614.3)
Net cash inflow from activities		14.4	16.6
(Decrease)/increase in current financial assets		(6.0)	1.7
Decrease in debt financing		235.1	136.0
Exchange and other non-cash movements		(3.1)	(3.6)
Movement in net debt		240.4	150.7
Closing net debt	27	(2,223.2)	(2,463.6)
